What is LIFE+ ?

LIFE+ (2007-2013) is the continuation of the LIFE programme adopted in 1992 to support EU environmental policy and legislation.

LIFE+ Nature and Biodiversity projects improve the conservation status of endangered species and natural habitats. They support the implementation of the Birds and Habitats Directives and the Natura 2000 network and/or contribute to halting the loss of biodiversity.

LIFE+ Environment Policy and Governance demonstration projects contribute to the development of innovative policy ideas, technologies, methods and instruments.

LIFE+ Information and Communication projects disseminate information and raise awareness on environmental issues.
