

# Aligning biodiversity metrics for business and support for developing generally accepted accounting principles for natural capital

## Project overview

Biodiversity is declining at unprecedented rates. In part, this is because the value of nature is not embedded within current economic thinking. Therefore, the way businesses measure and report on natural capital is limited. Recently, a call for robust and consistent measures of natural capital impacts and dependencies is being heard.

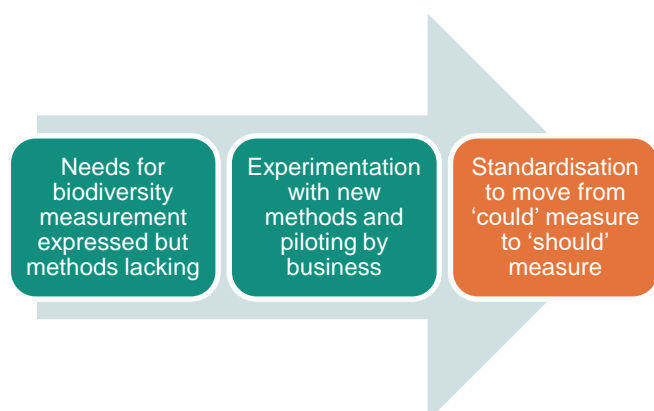

The Align project will assist the European Commission's efforts to support businesses and other stakeholders in developing standardised natural capital accounting practices, including a standardised approach to biodiversity measurement.

Specifically this will include:

1. Establishing and operating a dedicated natural capital management accounting platform for **facilitating best practice exchange** among business practitioners and relevant stakeholders;
2. Establishing and operating a business-driven discussion and alignment process that can **streamline and strengthen existing methods and metrics for measuring the impacts and dependencies on biodiversity**, including modules for inclusion in ongoing efforts to standardise natural capital management accounting practice; and
3. Defining **needs and opportunities relating to education, training, and research**, that are necessary for mainstreaming natural capital management accounting in the business community.

## Key outputs

- Validated proposals for standardised, biodiversity inclusive, natural capital management accounting practices through sector guidance
- Generally accepted set of methods, indicators and criteria for corporate biodiversity measurement approaches
- Sector-specific biodiversity measurement guidance for site-based and supply chain companies, as well as the finance sector, and modules/interfaces with other initiatives to facilitate uptake
- Standardised approach for measuring biodiversity impacts and dependencies by business and financial institutions drawing from and linking into existing measurement initiatives
- Prioritised needs and opportunities relating to education, training, research and innovation

# Aligning biodiversity metrics for business and support for developing generally accepted accounting principles for natural capital

## Opportunities to engage

**Community of Practice:** This group of active practitioners will work collaboratively to share experiences of best practice to encourage peer-to-peer learning; help develop a standardised approach to natural capital management accounting and biodiversity measurement; contributing existing knowledge, review and test draft guidance and/or standards to prove feedback. Individuals will gain access to cutting-edge documents as they form and input into development to ensure each is fit-for-purpose.

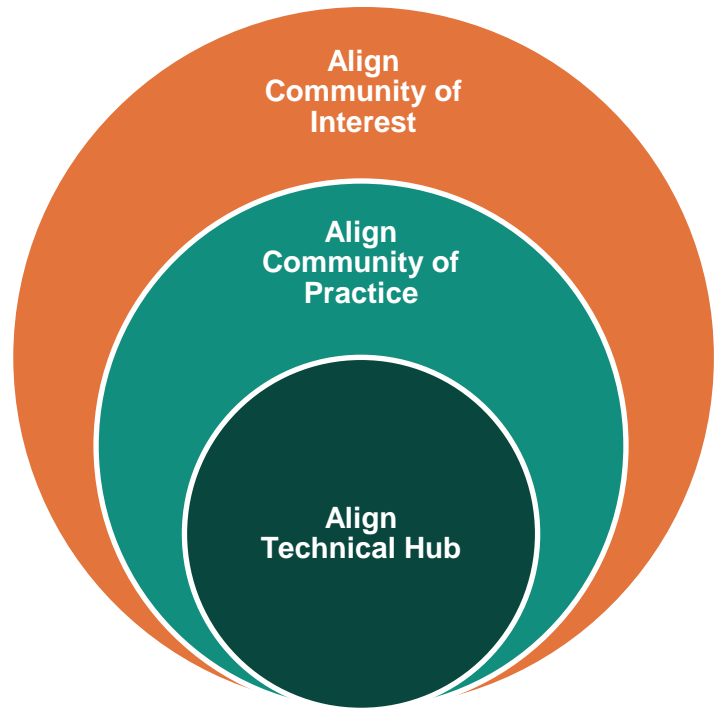

**Community of Interest:** If you prefer not to engage in detailed technical discussions but are interested in following the outcomes of the project, you can join the Community of Interest to be kept informed of progress through webinars and periodic updates.

**Technical Hub:** Provides technical support to the Community of Practice to progress thinking on areas of alignment, divergence and how best to standardise biodiversity measurement approaches for discussion and agreement at Community of Practice meetings. Invitations will be extended based on experience and expertise in the field.

Further details on the objective and expectations for each group are described within the Terms of Reference on the EU B@B Platform's website.

If you would like to join register to join the Community of Interest or request to join the Community of Practice, please do so by clicking the registration button provided above.

The Align project will balance the needs of businesses with the need to build a standardised approach that is supported by a broad range of stakeholders.

It will build on existing work under the EU B@B Platform, the Aligning Biodiversity Measures for Business collaboration and the TRANSPARENT project to maximise synergies; and engage with linked initiatives for harmonised progression, with the added benefit of intense business engagement.

Although the current focus is companies and financial institutions within the EU, it will link to global businesses and initiatives to ensure the project impact extends far and wide.

## Contact details

For further details or engagement opportunities please contact Elise Belle, Project Manager, WCMC Europe ([elise.belle@wcmc-europe.eu](mailto:elise.belle@wcmc-europe.eu)).
