## **Feedback:**

*Dear Lady/Sir,*

*I have read EIR based on the roadmap addresses the purpose of the EIR better application.*

*The following is my opinion about this urgent task.*

*There is a real need, it would be the European Union's environment and the right to effective compliance, implementation of the Member States and all EU citizens and for the part.*

*How this could be achieved and complied with?*

*At Member State level to narrow the national authority responsible for many of the Member States.*

*The European-level environmental law and its implementation in the Member States, the European Union placed control competence.*

*The reason for this is that the governments of the Member States do not comply with the environmental law due to their own selfish interests.*

*they can not, because of the lack of professional knowledge to protect the environment so that the environment gives rise to important economic and social issues, it will create.*

*Those who have not learned - because they learned or not learned in other areas - the environment as the science does not know what kind of specialized branches, areas of expertise, environmental science there are legal regulations in this area.*

*Environmental enforcement can promote the environmental responsibilities would not be very taken apart, divided the Member States of the various authorities.*

*"Among the many children lost a midwife." This is a Hungarian proverb.*

*The people, farmers, legislators, law enforcement hereinafter referred to as the training of all stakeholders is needed.*

*To be able to forward to everyone's access to justice in environmental enforcement.  
But this much time.  
But that something must be done to achieve better implementation for sure.  
With the help of even greater and more authentic information for the citizens of the  
European Union.  
You may have to create - at regional level - an EU-wide scale and impact of  
environmental bureau, which would be independent from the government of each  
Member State, from the influence of their own selfish interests of.  
So it can control and accountability leading to invite Member States governments.  
Unfortunately, I can be an example to anyone he wanted to build a regional small  
railway because of environmental targets have also served as the field trip, but jobs  
have been economic benefits and so have created.  
But unfortunately this is not the man realized that his plan because other implemented  
but not properly since the exact plan he did not know.  
In this case, it is clear that the plan implemented by people who get the necessary  
amount of money due for implementation powers.  
But they could bring their own examples of environmental enforcement is needed.  
In my own case is also a step beyond the powers caused by a lack of transparency and  
by national authorities. But it can be a good thing because I know what is referred to  
as I do, because I learned about it.  
In my case there is EU legislation, but they are nevertheless been ignored in the State  
and its officials.  
But this case also shows that the institution of the European Union carries out follow-  
up on environmental and energy matters and competition law cases.  
Thus, a true and fair learns the field of environmental abuse.  
In all cases the interest of the Union and its citizens, to the natural environment in the  
environment to perform up regulations to regulate and control will continue at the  
European level and scope.*

*Best regards,  
Anikó Márta Szűcsné Putics*
