### Nutrition dashboard for Mozambique

**Inputs**

|-------------------------------------------|-----------------------------------------------|---------------------------------------------------------------------------------|---------------------------|-----------------------------------------------|---------------------------------------------|---------------------------------|

**Context**

- Delivery in a health facility (%)
- HANCI Score
- Population Growth (millions)
- Gender Inequality Index (GII)
- Global multi-poverty index

**Context**

<table>
<thead>
<tr>
<th>Gini coefficient (income inequality)</th>
<th>Urbanisation (%)</th>
<th>DPT3 coverage (%)</th>
<th>Improved drinking water (%)</th>
<th>Women's primary education (%)</th>
</tr>
</thead>
</table>

**Legend**

Green: data falls within the top of the 2012 groups
Orange: data falls within the middle of the 2012 groups
Red: data falls within the bottom of the 2012 groups

In addition, the change in each indicator since the baseline is illustrated by a separate traffic light signal. Amber denotes no or 'limited' change, calculated by subtracting the minimum value from the maximum value for each indicator, and then dividing by the number of countries. This provides a range around the zero for each indicator.

- There has been an improvement since the baseline
- There has been no or limited improvement since the baseline
- There has been a deterioration since the baseline
