LEGEND

Thresholds were defined for each indicator for the baseline year, which divided the countries up into 3 groups of equal size. These same thresholds have been applied to the relevant indicator to assess the status of the most recent data:

- Green: data falls within the top of the 2012 groups
- Orange: data falls within the middle of the 2012 groups
- Red: data falls within the bottom of the 2012 groups

In addition, the change in each indicator since the baseline is illustrated by a separate traffic light signal. Amber denotes no or 'limited' change, calculated by subtracting the minimum value from the maximum value for each indicator, and then dividing by the number of countries. This provides a range around the zero for each indicator.

- There has been an improvement since the baseline
- There has been no or limited improvement since the baseline
- There has been a deterioration since the baseline
