The BOP International Trade in Services team (Ignacio Alonso Zabaco, Thomas Deschamps, Alessandro Lupi and Yann Marcus) has carried out this document under the co-ordination of Luis Biedma, an official of the Unit B5.

We strive to make this seventh edition of the BOP ITS compilation guide the more useful and easy to consult. However, we intend to improve it every year thanks to your remarks.

Thank you and please note our address:

Introduction

This is the seventh edition of the International trade in services compilation guide, referring to the 2001 production. It describes the harmonisation that Eurostat applied to the Member States' new and revised data. The corrections and estimations carried out on the figures published for previous years are described in the previous issues of the compilation guide (see table next page).

The aim of this compilation guide is to provide absolute **transparency** in relation to the harmonisation process applied by Eurostat to each Member State original data. The domain covered is the annual current account data (International trade in services - **ITS** / Geographical breakdown of the current account - **GBR**).

Each year or quarter, the national banks or the national statistical offices provide Eurostat with data according to a set of questionnaires approved by all Member States and designed to fulfil a set of requirements. These questionnaires are included in an internal document called the Balance of Payments Vade mecum. This document contains apart from the questionnaires, coding system, format and media details, deadlines and instructions on how data should be supplied.

Due to a variety of reasons, Member States are still not able to comply fully with the BOP Vade mecum and the IMF Balance of payments Manual, fifth edition (BPM5). For this reason, and while waiting an EU regulation that should establish a common framework for the systematic production of community statistics on International Trade in Services, Eurostat concluded gentleman's agreements. These agreements, based on the report of Task Force2 'Current account', are intended to improve compliance with the rules and recommendations laid down in the report.

Thus, Eurostat has to apply several adjustments to the original data supplied by the Member States in order to harmonise and fill up missing information to produce a Balance of payments of the European Union as meaningful as possible.

Most probably, this work will have to be continued for some time, till full compliance is achieved.

Eurostat's primary concern regarding definition of harmonisation methods to obtain comparable data series (across countries and through time) is the European Union and euro-zone aggregates. The results may be meaningless at Member State level, provided that the EU-15/Euro-zone totals are meaningful.

The objective of the compilation guide is to enable users or providers of EU BOP information to arrive to the harmonised data of a given country applying a sequence of **operations** to the **original data** provided by the country in question.

Corrections and estimates are carried out by Eurostat after discussing them with the Member State concerned. The compilation guide will not change this current practice. Its purpose is to formalise the ways in which the corrections and estimates are made so that they are clearly explained.

This document contains two parts. The first part defines the data methodological framework of the EU balance of payments presenting the general rules to be applied for the compilation and more particularly the rules and recommendations of Task Force 2 'Current account'. The classifications (nature of transaction and countries, geographic and economic zones) are presented. The reader can find in the last paragraph a scheme describing the Eurostat production process.

In the second part, for each country deviations from the defined methodology are presented. Each correction and estimate carried out by Eurostat is described in detail. At the end, a table summarises the 'percentages of intervention' for each Member State. To allow the comparison with previous years the 'percentages of intervention' corresponding to the 1998, 1999 and 2000 productions (and given in the previous editions of the compilation guide) are also indicated.

The annexes present the BOP items and geographical breakdown published in the latest CD-Rom "International trade in services, Geographical breakdown of the current account – EU".

N.B.: Published data for the euro-zone includes detail on services only. They have been validated by the ECB. In fact, in order to conform to the internationally agreed methodology, Member States were requested to change the geographical allocation of intra-EU/euro-zone imports of goods from country of origin to country of consignment. Regarding the calculation of the EU/euro-zone aggregates, the principle of consignment has been implemented from 1997 onwards.

PART I

Methodological framework of the balance of payments

1. General rules

In general, MS should apply the following rules and recommendations for the compilation of their balance of payments statistics:

- **the rules and recommendations of the IMF Balance of Payments Manual, 5th edition (BPM5).**
- **the additional (supplementary) guidelines given in the report of Task Force 2, in particular the rules for selected items given below.**

These guidelines are reviewed by each Member State in the framework of the Gentleman's Agreement exercise. The mandate of the Gentleman's Agreement was to define the contribution of the national compilers to the EU BOP as compiled by Eurostat. It seeks to secure continuity of supply and improve the quality of the information. It helps to solve problems, while waiting an EU regulation, finding practical and acceptable solutions both to each country and Eurostat.

- **the "nature of transaction" classification (based on the joint OECD/Eurostat classification) and the geographical classification described in the Eurostat BOP Vade mecum**

2. Rules and recommendations of the TF2

A General merchandise

A.1 General merchandise, geographical allocation of exports/imports

Rule: The geographical allocation of both extra trade and intra trade should be made by the country of destination (exports) resp. by country of consignment (imports), as defined in the EU extra trade and intra trade directives. (Supplementary trade items should be allocated in the same way, in principle). But for extra-EU imports the origin principle was approved at the BOP working party 22-23/10/97 (cf. Minutes § 29).

A.2 General merchandise, disguised direct transit trade

Rule: the geographical allocation rule (A.1.) is of particular importance with regard to the so-called disguised direct transit trade. Such trade should not be eliminated from the BOP of the "transit countries", at least not from the figures reported to EUROSTAT.

A.3 General merchandise, trade through international distribution centres located in a Member State

Rule: imports into/ exports from international distribution centres held within the customs territory of a MS should not be excluded from the BOP of that MS, at least when reporting to EUROSTAT; imports into/ exports from distribution centres located in a free area of MS and held by residents of non-MS should be recorded only at the time the goods are imported by a MS.

A.4 General merchandise, transactions in goods between affiliates

Rule: Transactions in goods between affiliated entities (e.g. between a parent and its branches or assembly plants abroad), and transactions under joint international production programs (e.g. Airbus) should be included in general merchandise in the BOP, and not be eliminated from the trade statistics figures.

A.5 General merchandise, transactions in goods in free ports, free areas, customs bonded warehouses

Rule: the compilation of trade should be based on the change of ownership-principle. As most MS derive their trade figures from international trade statistics (general or special trade statistics) which include all flows of goods across the (national or customs) border, without regard to change of ownership, certain corrections to the trade figures are inevitable. If the goods-item is based on general trade statistics, imports/ exports on account of non-residents must be excluded; if special trade figures are used, imports into/ re-exports from free ports etc. on account of residents must be added.

B Goods for processing

Rule: The international activities related to processing should be recorded as follows:

The item 'goods for processing' should include:

- a) the flows that are registered in the foreign trade statistics of the two countries concerned (country of origin and country of processor), i.e. all goods sent for processing at their value before processing (export/import

for processing), and the goods actually returned after processing to the country of origin (re-imports / re-exports after processing), their value including the process fee.

b) (fictitious) re-imports resp. re-exports of the goods that were sold abroad (in the processors or in a third country), i.e. it is assumed that all goods are first returned to country of origin (see next paragraph).

As stated above, goods sold abroad after processing (and not actually returned to the country of origin) are recorded as (fictitious) re-import by resp. re-export to that country; this entry is offset by a (fictitious) export to / import by the processor's country (in "general merchandise"). This rule has been chosen in order to comply with SNA/ESA (sources and uses approach) and to avoid inconsistencies with foreign trade statistics.

For goods not finished in the same period offsetting entries should be made in the financial account, in principle. As these entries will, by and large, balance out, it should be left to the MS whether such entries are made or not. Apart from this timing difference, the net entries in the item "goods for processing" reflect the processing fees paid by the customers to the processors.

C Goods procured in ports

Rule: Goods procured by carriers in foreign ports should be collected/estimated, at least purchase of energy products (fuel).

D Non monetary gold

Rule: non monetary gold covers exports and imports of all gold not held as reserve assets by the authorities; it is treated as any other commodity (§ 202 BPM5). Transactions in (physical) gold should be included even if the gold does not cross the border of the compiling country. Temporary transactions (e.g. gold purchased and resold by the banks) should be regarded as "merchanting trade". Acquisition and disposal of gold-denominated claims/ liabilities is a financial transaction.

E Transportation

E.1 Freight

Rule: Freight of imports and exports for all modes of transportation should be determined so as to correspond to the fob valuation of merchandise. Payments reports are not suited for this purpose as the amounts reported depend on the delivery clause of the contract; estimates are therefore inevitable.

E.2 Passenger services, and supporting and auxiliary transport services

Rule: Passenger services, and supporting and auxiliary transport services should be ascertained separately, especially in sea and air transport. Surveys/estimates may be necessary to establish complete figures (e.g. fares included in the price of package tours, or payments by a resident exporter to a resident supplier of auxiliary services beyond the "fob-border").

E.3 Operator principle

Rule: The MS should apply the operator principle for recording and geographical allocation of sea transportation (included the distinction between residents/non-residents), regardless of ownership and registration, i.e. the MS must collect data for/from all entities which operate ships from the MS' territory.

F Travel

F.1 Exclusion of non-travel cash payments

Rule: Payments in cash for other purposes than travel, e.g. general merchandise, income of border workers, financial transactions ("capital flight"), should be excluded. The same applies to re-exchange of unused bank notes and traveller cheques. Surveys and estimates based on other information than the bank reports may be required.

F.2 Exchange of figures for purchases and sales of foreign bank notes

Rule: Those MS which have data on gross purchases and sales of the different foreign bank notes (currencies) by their banks should continue with the exchange of such data which began under the auspices of the OECD in the early seventies. MS not having such data (or not participating in the present exchange) should try to collect the data and participate in the exchange.

F.3 Geographical allocation of cash payments in currencies used internationally

Rule: The MS should improve the geographical allocation of cash receipts/payments in currencies which are widely used in international transactions, in particular the US dollar. For this purpose other travel or tourist statistics with geographical breakdown should be used as basis for estimates.

G Construction services

G.1 Borderline between 'construction services' and 'direct investment'

Rule: TF2 recommends to adhere to the criteria for direct investment in the "Detailed benchmark definition of foreign direct investment" of the OECD. That is, all site offices set up in the (legal) form of subsidiaries and unincorporated partnerships should be regarded as direct investment. Unincorporated branches and site offices set up in the host country to carry out a construction order should be regarded as direct investment only if they are "permanent" establishments. This corresponds to the rule set up in § 73 BPM5 ("the enterprise must plan to operate the establishment indefinitely or over a long period of time").

The exploration/exploitation of resources of crude oil, natural gas and mineral ores should in most instances be regarded as "direct investment", the development of oil fields etc. requires big investments. These projects are often carried out by a joint venture of an operator and partners which normally meets the criteria of direct investment.

Drilling rigs etc. operating in international waters should be regarded as mobile equipment, the related transactions be recorded in the items concerned (e.g. mining services) and allocated to the country of the operator. On the other hand, oil/gas production (e.g. in the North Sea) should be regarded as part of the domestic production of the country to which the production site is attributed; the company that carries out the production is a resident of that country, foreign shareholders of that company are direct investors, oil sales to foreign countries constitute exports. In this field varying recording practices can be found, which may cause large discrepancies in the BOPs of the countries concerned; therefore the MS involved should undertake efforts to align their recording practice.

G.2 Recording rule for 'construction services'

Rule: Once it has been decided to regard a project as "services", the transactions should be recorded in the following way in the figures reported to Eurostat:

G.2.a Gross recording of receipts and expenditures according to the OECD/Eurostat classification:

There should be gross recording of construction receipts and expenditures in the two sub-items for construction in the OECD/Eurostat classification of international trade in services, i.e. construction abroad (by resident contractors) construction in the compiling country (by foreign contractors).

In the first sub item the gross payments made under the contract by the non-resident customer (credits) and the expenditures made by the contractor (or by his site office) in the host country in performance of the contract (debits) should be recorded. In the second sub-item the gross payments (transactions) related to construction by non-resident contractors in the compiling country should be recorded correspondingly (contractual payments: debits, expenditure in the compiling country: credits).

Note that (local) expenditures also include goods supplied to the building site from the contractor's country and goods and services supplied to the building site from third countries (see point b and c below). When local supplies (or supplies from third countries) are paid by the site office, it will usually make these payments from lump sum transfers received from the general contractor. Such transfers should therefore be recorded in the construction sub-item in question as expenditures.

G.2.b Goods supplied (for use in the project, excluding equipment for temporary use) to the host country from the general contractor's country

Goods supplied (for use in the project, excluding equipment for temporary use) to the host country from the general contractor's country should be left in "general merchandise" and be offset by recording corresponding debits in the construction sub-item in question. Such offsetting entries are necessary because the value of these goods are usually included in the contract payment(s) by the customer, and because the construction items should show all expenditures (input) related to the construction services.

G.2.c Goods supplied to the host country from third countries

Goods supplied to the host country from third countries should be recorded in two steps, first as exports of goods to the host country of the building site, and then as sales from that country to the general contractor as local supplies (recording in the construction sub-item in question). Services supplied by third countries should in principle be recorded in the same way, however in the frequent case of such services being paid

by the general contractor directly to the supplier, they should be recorded as imports to the contractor's country (item concerned) which are the used in the production of construction services.

H Insurance services

H.1 Determining the service charge included in premiums

Rule: the service charge component in premiums should be estimated, the rest of the premiums, and the claims should be recorded in current transfers (non-life insurance) or in the financial account (life insurance). The service charges included in the premiums for re-insurance should be estimated and recorded in the same way, in principle.

A Task Force "insurance" has already done an important work in order to produce a realistic and consistent estimate of the service charge component to be used by all Member States. This estimate is based on the information contained in the European Insurance Enterprise Statistics (IES).

H.2 Estimating the cost of transport insurance included in the C.I.F. values of imports (foreign trade statistics)

Rule: the premiums for insurance of imports (transport insurance) must be estimated, be deducted from the import c.i.f.-values of trade statistics, and -insofar as they are relevant to the BOP- be recorded as a kind of non-life insurance (see preceding paragraph). As the totals are not big in most countries, a simple method of estimation is recommended: the value of imports of the compiling country should be multiplied by an average rate (average of premiums charged by representative resident and foreign insurers), the share of non-resident insurers should be regarded as premium debits (see preceding paragraph). The average premium and the average share of non-resident insurers could be established through occasional surveys.

I Financial services

Rule: fees and commissions associated with the intermediation of trade in financial assets, or with the purchase and sale of financial assets on behalf of customers, or with other services in the financial field (e.g. account management) should be ascertained and recorded in this item if they are charged (invoiced) separately to the customers. Efforts should be made to collect this information (or to make an estimate) if these fees are not reported separately at present (but are, instead, included in the financial account, together with the assets traded). Included should be fees etc. related to trade in all kinds of financial assets (as defined in BPM5, including financial derivatives).

It may be easier to establish the credit figures than the debits. If it turns out that the intra-EU credits exceed the debits considerably, an exchange of figures, or a systematic completion of the debit side by EUROSTAT (estimate) could be envisaged.

J Merchancing trade

J.1

Rule: The MS should comply with the definition of "merchancing" and with the recording rule set out in § 262 BPM5, in principle.

J.2

Rule: Merchancing comprises not only trade by resident professional merchants; trade in goods located abroad by other resident companies may be important in some MS, and must be ascertained anyway as it is not covered by the foreign trade statistics. For example, the trade of resident banks in (physical) gold held abroad is normally temporary and must be included with "merchancing".

J.3

Rule: Merchancing may comprise, in addition to trade in goods located outside the national border, trade in goods located within free ports, customs bonded warehouses etc., if "during the process" the goods do not cross the border. These transactions should also be included, overlapping with foreign trade statistics (in particular: general trade) should be avoided.

J.4

Rule: The changes in stocks held abroad by merchants and other traders must usually be estimated. MS using settlements figures should attempt to make an estimate (at least annually), MS relying on surveys should include appropriate questions in the questionnaire. The annual net change in stocks could be

recorded under "general merchandise" (imports, or negative imports); in view of its temporary character, a geographical breakdown is not required.

J.5

Rule: The geographical breakdown of the traders' net profits/ losses should be made in proportion to the geographical classification of their gross sales, i.e. it is assumed that the profits are borne by their customers (buyers of the goods).

K General payments between affiliates

Rule: this item, which does not exist in the IMF-standard classification, is another sub-item of "miscellaneous business services". It should be defined as narrowly as possible, in order not to invalidate the analytical value of the classification by kind of service. As it is not possible to imagine all kinds of transactions between affiliated companies that occur in practice, only some general guidelines can be given.

K.1 Transactions between parents and their agencies, sales offices etc. abroad (§ 83 BPM5):

- Revenues of the sales offices from residents of their host country (other than for goods sales) should be recorded as imports of services by the host country from the parent's country; e.g. the sale of tickets by the agency of a foreign airline to residents of the host country constitutes an import of passenger services from the country of which the airline is a resident.
- The running costs of the agency/ sales office should be recorded as a service rendered by the agency to the parent, in the service concerning the main activity of the agency, e.g. as commissions on passenger or freight services, or on insurance services (§§ 240, 255 BPM5), without attempting to split them up.
- In summary, there should be little scope for using the item "general payments between affiliates" for payments between parent companies and their affiliates classed as agents.

K.2 Transactions between other affiliates (parents, subsidiaries, branches etc.)

- Specific payments (to compensate the affiliate for identifiable goods and services supplied to other members of the group: recording in the goods/ services item concerned
- The transfer of money by the parent to its affiliate, e.g. as a subsidy to cover an accounting loss in the preceding period, or payments to enable the affiliate to carry on with its activities: in the first case, the accounting loss should be recorded in direct investment income, offset by an entry in direct investment capital; when the payment is made, it is offset by an opposite entry in direct investment capital. If the transfer is made for other purposes, this will normally have to be recorded as a direct investment capital flow.
- Transfer of money by the affiliate to its parent, e.g. remittance of sales proceeds, or of cash not needed: normally recording as direct investment income, distributed earnings.
- Non-specific payments for various services: recording in "general payments between affiliates". If the payment seems to include -in addition to compensation for unspecified goods and services- other components, it should be examined whether the payment does not constitute a disguised direct investment (capital or income) flow.

L Compensation of employees

L.1 Gross recording

Rule: The income (wages, salaries etc.) and the taxes, social securities etc. deductions should be recorded gross, in the items concerned. Estimation problems are discussed in Ch. LI, pp. 2-3.

L.2 Transactions below the reporting threshold

Rule: Transactions of the kind mentioned in point 1 above which are below the reporting threshold should be estimated.

M Current transfers

M.1 Distinction between current and capital transfers

Rule: Current and capital transfers should be distinguished according to BPM5.

M.2 Transfers between the MS and the European Union Institutions

The TF2 rule concerning the transfers between the MS and the European Union Institutions has been reviewed.

The document "Current and capital transfers from the EUI- a proposed treatment" (BP/96/29/E) was discussed in the October 1996 WP. A written procedure was launched in January 1997 and the results were discussed in the March 1997 WP (document "Treatment of EUI transfers: final approval of the document updated by the January 1997 written procedure" – BP/97/11/E).

The following rules, either differing from the original TF2 recommendation or dealing with points needing clarification, were finally adopted:

Rule: European Social Fund (ESF): 100% current

Cohesion Fund: 100% capital

European Regional Development Fund (ERDF): 100% capital

Set – aside payments: 100% current

Transitional Measures and Innovation Schemes (TMIS): 100% current

European Agricultural Guidance and Guarantee Fund – Guidance section: 100% capital (in the absence of detailed information on the nature of specific actions – otherwise according to the nature of the action)

Financial Instrument for Fisheries Guidance (FIFG): 73% capital – 27% current (in the absence of detailed information on the nature of specific actions – otherwise according to the nature of the action)

These rules should be observed by both Eurostat and Member States. Mutual information when changes occur is necessary to guarantee a harmonised treatment.

M.3 Private transfers

Rule: The MS should exchange figures for private transfers, at least for some kinds (e.g. workers remittances, pensions and rents), to establish reliable figures. If exchange of data is not feasible, estimates are necessary.

Z5 WORLD NOT ALLOCATED GEOGRAPHICALLY

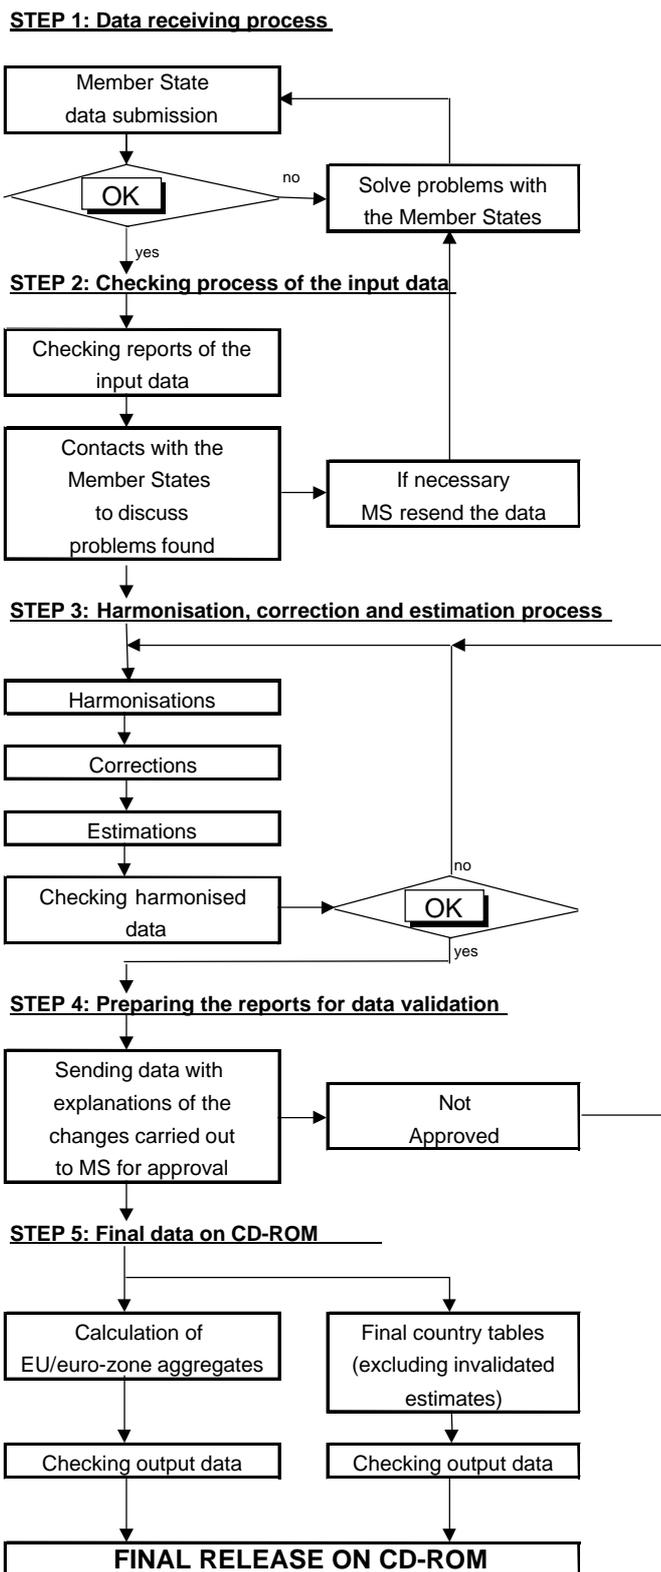

4.3. Integrity rules for BOP geonomenclature

Minimal check requirements: The sum of the components must be equal to the aggregate and consistency between geographic zones and economic zones must be respected. These rules have to be applied on credits and debits.

5. Production process

PART II

Deviations from the defined Methodology

1. General description of main corrections and estimations

Corrections and estimates can be classified by the following types and sub-types:

- ä Corrections/estimates using data from the **same** Member State
 - with **direct** data
 - with **weighted structure**
- ä Corrections/estimates using data from **other** Member States
 - with **direct** data
 - with **weighted structure**

Note: Corrections and estimates are performed on Member State original data in national currency.

Corrections/estimates using data from the same Member State.

1.1.1 Estimating / correcting with direct data

- * Estimating / correcting the net flows using the difference between credit and debit flows.
- * Estimating / correcting flows for an aggregated item using the sum of individual given items.
- * Estimating / correcting flows for an aggregated partner zone using flows of other(s) partner zone(s).
- * Correcting the flows of *Merchandising*: putting in net the available gross flows.
- * Estimating / correcting flows for an individual item using the difference between flows of two other aggregated items.
- * Estimating / correcting flows for a partner zone using the difference between flows of two other aggregated partner zones.
- * Estimating / correcting the flows of the "Financial account" using estimated / non-corrected flows of the "Financial account", correct flows of the "Goods, services and income" account and the original flows of the "Goods, services and income" account for a proxy partner zone.
- * Correcting *Net errors and omissions* ($998 = - 993 - 996$)
- * Correcting the flows of *Insurance services*: putting in net the available gross flows by applying to gross flows known coefficients that represent the service component;
Recording the remaining part of gross insurance flows under the corresponding flows of *Private current transfers*.
- * Correcting the flows of *Insurance services*: putting in net the available gross flows by deducting from gross flows, *Gross claims* received and *Gross claims* paid;
Recording the remaining part of gross insurance flows under the corresponding flows of *Private current transfers*.

1.1.2 Estimating / correcting with weighted structure

- * Estimating / correcting flows for a given partner zone and a given year using an average *proportion* involving another partner zone and other years.
- * Estimating / correcting flows for a given item and a given year using an average *proportion* involving another item, and other years.
- * Estimating / correcting flows for a given item and a given partner zone using a *proportion* involving another item and another partner zone.
- * Estimating / correcting flows for a given item using a *proportion* involving two other items.

Corrections / estimates using data from other Member States

1.2.1. Estimating / correcting with direct data

- * Estimating / correcting flows for partner zone *intra-EU* using available bilateral flows of main EU partners.

1.2.2. Estimating / correcting with weighted structure

- * Estimating / correcting flows for a given item and a given year using an average *proportion* involving a mixed item, other EU Member States and several years.
- * Estimating / correcting flows for partner zone *extra-EU* using an average *proportion* involving partner *intra-EU*, partner (*intra-EU + extra-EU*) and other EU Member States.
- * Estimating / correcting flows for a given partner zone and a given year using an average *proportion* involving another partner zone, other EU Member States and another year.

2. Description of corrections and estimates for each Member State, EU, euro-zone, Norway, the USA and Japan and table of percentage of intervention.

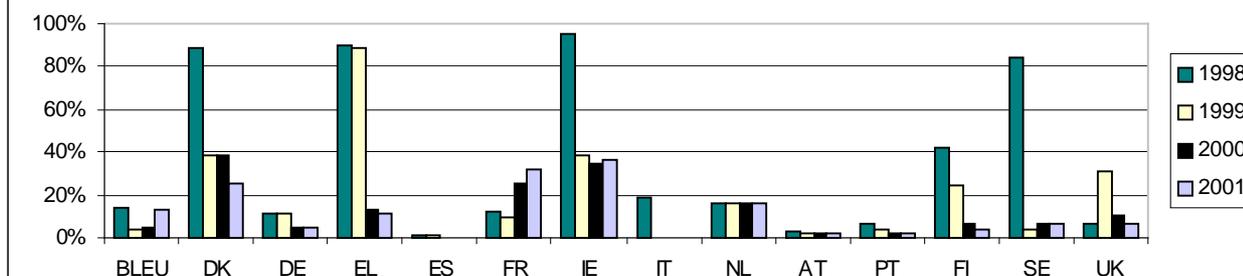

Note: The reports present country by country the estimations carried out for the purpose of the ITS and GBR publications. Please note that estimations marked by a n have been used to calculate the European Union / euro-zone aggregates only and are not printed in the country tables.

Moreover, no results with partners extra and intra-euro-zone were published in the country tables, and the results concerning the euro-zone show the breakdown of services only.

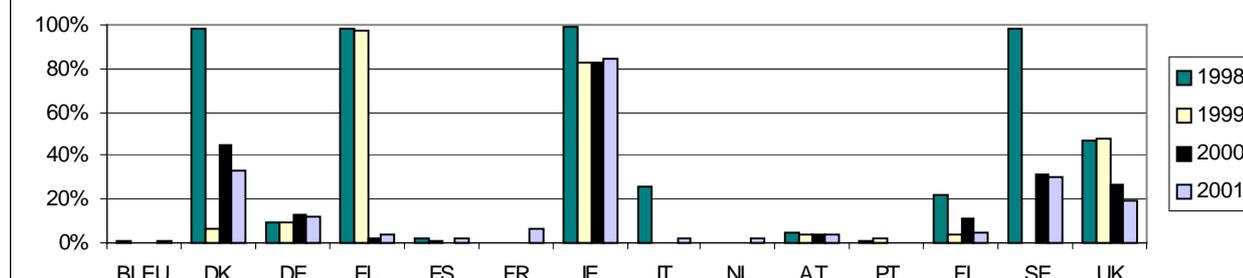

Evolution of the percentage of intervention along the years

Evolution of the percentages of intervention along years - GBR

Calculation of the EU/euro-zone aggregates

The estimates for the EU-15 and EU-12 balance of payments correspond to the sum of the fifteen (respectively of the twelve) Member States. The balance of payments of the European Union Institutions is added to the European Union aggregate.

$$X_{n/partner}^b = \sum_{a \in MS} X_{n/partner}^a$$

where $X \in \{\text{all items}\}$

$\beta \in \{\text{D2, A2}\}$

$MS = \{\text{A3, DK, DE, GR, ES, FR, IE, IT, NL, AT, PT, FI, SE, UK, 4A, 4F}\}$ for $\beta = \{\text{D2}\}$

$MS = \{\text{A3, DK, DE, GR, ES, FR, IE, IT, NL, PT, UK, 4A}\}$ for $\beta = \{\text{A2}\}$

$n \in \{\text{all years}\}$ for $\beta = \{\text{D2}\}$

$n \in \{\text{all years until 1995}\}$ for $\beta = \{\text{A2}\}$

As regards the euro-zone, Eurostat published only the breakdown of trade in services. The balance of payments of the euro-zone is compiled as the sum of harmonised balance of payments accounts of the twelve concerned Member States (eleven up to 2000). The European Union Institutions are regarded as supranational and international organisations in relation to the euro-zone, i.e. they are treated as non-residents of the euro-zone.

$$X_{n/partner}^{U2} = \sum_{a \in MS} X_{n/partner}^a$$

where $X \in \{\text{all services items}\}$

$MS = \{\text{A3, DE, ES, FR, IE, IT, NL, AT, PT, FI, 4F}\}$ until 2000 ;

$MS = \{\text{A3, DE, GR, ES, FR, IE, IT, NL, AT, PT, FI, 4F}\}$ from 2001 onwards ;

$n \in \{\text{1992 to 2001}\}$

- Implementation of principle of consignment

In order to conform with the internationally agreed methodology, the EU Member States were requested to change the geographical allocation of intra-EU/euro-zone imports of goods from country of origin to country of consignment.

Regarding the calculation of the EU/euro-zone aggregates, the principle of consignment has been implemented from 1997 onwards.

At country level, the period for implementing the principle of consignment differs from one Member State to another (see the description of the estimations for each Member State).

Belgium and Luxembourg

National data provider:

Banque Nationale de Belgique (BNB) - Banque Centrale du Luxembourg, Service Central de la Statistique et des Etudes Economiques (STATEC)

Methodology applied at national level:

BPM5

Data collection system:

Firms and individuals: General direct reporting (DDG)

Holders of accounts abroad & international netting (DDP)

National publication:

Bulletin de la Banque Nationale de Belgique, Banque Nationale de Belgique, quarterly

Member State contact:

Mr De Boeck, Mr D'Havé

New data provided to Eurostat:	2001		
Revised data provided to Eurostat:	1999 - 2000		
ITS: percentage of intervention by Eurostat to calculate EU aggregates	1999-01:		13%
GBR: percentage of intervention by Eurostat to calculate EU aggregates	1999-01:		1%

At the request of BLEU, data from 1985-1990 originally sent by BLEU has not been published by Eurostat. However this historical data has been converted by Eurostat from BPM4 to BPM5 in order to calculate the EU aggregate.

The data concerning the years 1991 to 1998 correspond to the figures published in the Eurostat publications "International Trade in Services: EU, 1991-00" and "Geographical Breakdown of the Current Account: EU, 1997-00". The estimation procedures carried out for these years can be found in the "International Trade in Services, Compilation Guide", December 2001 edition.

1999 - 2001 Data

n **250 - Construction abroad;**

n **251 - Construction in the compiling economy:**

These missing items are the sub-items of *construction services* (249). Eurostat estimated them by applying the average structure of *construction services* as given by 7 other Member States for partner World (A1).

$$X_{n/partner}^{A3} = 249_{n/partner}^{A3} \times \underset{a \in MS}{average} \left(\frac{X_{n/A1}^a}{249_{n/A1}^a} \right)$$

where $X \in \{250, 251\}$

$n \in \{1999, 2000, 2001\}$

partner $\in \{A1, D2, D4, U2, U4, CA, US, JP\}$

MS = $\{DE, GR, ES, IT, NL, AT, PT\}$

n **339 - Portfolio investment income:**

This sub-item of *Investment income* (320) was provided with partner World only. Eurostat estimated it for the other ITS partners (except Canada and USA) by applying the size of *Portfolio investment income* in the aggregate *Investment income* as given for partner World (A1).

$$339_{n/partner}^{A3} = 320_{n/partner}^{A3} \times \left(\frac{339_{n/A1}^{A3}}{320_{n/A1}^{A3}} \right)$$

where $n \in \{1999, 2000, 2001\}$

partner $\in \{D2, D4, U2, U4\}$

OECD countries (A8)

Partner Slovakia (SK) has been considered as part of the OECD, while it became an OECD member only in 2001.

Eurostat subtracted this partner from the definition of the OECD partner zone, for the period 1999 to 2000.

$$X_{n/A8}^{A3 \text{ Corrected}} = X_{n/A8}^{A3 \text{ Original}} - X_{n/SK}^{A3}$$

where $n \in \{1999, 2000\}$

$X \in \{\text{all GBR posts}\}$

Intra and extra-Euro-zone (U2 and U4)

Partner Greece (GR) has been considered as part of the Euro-zone, while it became a Euro-zone member only in 2001.

Eurostat subtracted this partner from the definition of the Euro-zone, and added it to the extra-Euro-zone, for the years 1999 and 2000.

$$X_{n/U2}^{A3 \text{ Corrected}} = X_{n/U2}^{A3 \text{ Original}} - X_{n/GR}^{A3}$$

$$X_{n/U4}^{A3 \text{ Corrected}} = X_{n/U4}^{A3 \text{ Original}} + X_{n/GR}^{A3}$$

where $n \in \{1999, 2000\}$

$X \in \{\text{all ITS posts}\}$

Denmark

National data provider:

Danmark Statistik

Methodology applied at national level:

BPM5

Data collection system:

The system: Basically, a settlements closed system

Main sources: Accounts abroad, customs

National publication:

Monetary review, Denmark's Nationalbank, monthly

Member State contact:

Mr. Poul Uffe Dam (Danmark Statistik)

New data provided to Eurostat: 2001

Revised data provided to Eurostat: 1999-2000

ITS: percentage of intervention by Eurostat to calculate EU-15	1999:	25%
	2000:	23%
	2001:	25%
GBR: percentage of intervention by Eurostat to calculate EU-15	1999:	29%
	2000:	25%
	2001:	33%

The data concerning the years 1990 to 1998 correspond to the figures published in the Eurostat publications "International Trade in Services: EU, 1991-00", and "Geographical Breakdown of the Current Account: EU, 1997-00". The estimation procedures carried out for these years can be found in the "International Trade in Services EU, 1991-00 Compilation guide", December 2001.

1999 to 2001 Data

n **263 - Computer services;**

n **264 - Information services:**

These two items were missing in the breakdown of *computer and information services* (262). Eurostat estimated these items by using their average share in the aggregate *computer and information services* as provided by seven other reporters for partner World.

$$X_{n/partner}^{DK} = 262_{n/partner}^{DK} \times \underset{a \in MS}{average} \left[\frac{X_{n/A1}^a}{262_{n/A1}^a} \right]$$

where $X \in \{263, 264\}$

$n \in \{1999, 2000, 2001\}$

$MS = \{A3, GR, ES, IT, AT, PT, GB\}$

$partner \in \{A1, D2, D4, CA, US, JP\}$

n **273 - Miscellaneous business, professional and technical services:**

n **310 - Compensation of employees:**

Proper offsetting adjustments were implemented by Eurostat to items *miscellaneous business, professional and technical services* (273) and *compensation of employees* (310) in order to take into account the provision of memo-data by Denmark for *construction services* (249) and its breakdown (i.e. *construction abroad* - 250 - and *construction in the compiling economy* - 251) that was included in these items. The offsetting adjustments have been made according to the share observed for each of these two items, as originally provided by Denmark, in the total amount (273+310) for partner World and by applying this share to item 249. This amount was then subtracted to the original 273 and 310 items. The following formula describe the procedure:

$$X_{n/partner}^{DK} = X_{n/partner}^{DK} - \left\{ 249_{n/partner}^{DK} \times \left[\frac{X_{n/A1}^{DK}}{273_{n/A1}^{DK} + 310_{n/A1}^{DK}} \right] \right\}$$

where $n \in \{1999, 2000, 2001\}$

$X \in \{273, 310\}$

$partner \in \{\text{all GBR partners}\}$

Afterwards, items *other business services* (268), *other services* (981), *services* (200) and *income* (300) were corrected accordingly as they include the two modified sub-items.

n **274 - Legal, accounting, management, consulting and public relations services;**

n **278 - Advertising, market research and public opinion polling services;**

n **279 - Research and development services;**

n **280 - Architectural, engineering and other technical services;**

n **281 - Agricultural, mining and on-site processing services;**

n **284 - Other – Miscellaneous business, professional and technical services;**

n **285 - Services between affiliated enterprises, n.i.e.:**

The breakdown of item *miscellaneous business, professional and technical services* (273) was estimated by Eurostat on the basis of the average share for each sub-item in the aggregate *miscellaneous business, professional and technical services* as provided by seven other Member States for partner World.

$$X_{n/partner}^{DK} = 273_{n/partner}^{DK} \times \underset{a \in MS}{average} \left[\frac{X_{n/A1}^a}{273_{n/A1}^a} \right]$$

where $X \in \{274, 278, 279, 280, 281, 284, 285\}$

$MS = \{A3, DE, ES, IT, AT, PT, GB\}$

$n \in \{1999, 2000, 2001\}$

$partner \in \{A1, D2, D4, CA, US, JP\}$

Geographical breakdown:

ACP countries (B5)

For the years 2000 and 2001 this economic zone was not equal to the sum of its components; therefore, Eurostat corrected this partner zone as the sum of the countries and areas that make it up.

$$X_{n/B5}^{DK} = \sum X_{n/partner}^{DK}$$

where $X \in \{\text{all GBR items}\}$

$n \in \{2000, 2001\}$

$partner \in \{B6, B7, B8\}$

n International Organisations excluding European Union Institutions (7Z)

Denmark did not provide this partner. Eurostat estimated Danish transactions with the international organizations by applying the average share of international organizations in the extra-EU-15 (D4) as provided by ten other Member States.

$$X_{n/7Z}^{DK} = X_{n/D4}^{DK} \times \underset{a \in MS_1}{average} \left[\frac{993_{n/7Z}^a}{993_{n/D4}^a} \right]$$

where $X \in \{\text{all GBR items}\}$

$MS_1 = \{A3, DE, GR, ES, FR, IT, NL, AT, PT, GB\}$

$n \in \{1999, 2000, 2001\}$

n Extra-EU-15 not allocated (Z8)

The not allocated flows provided for extra-EU-15 (Z8) were reallocated to the extra-EU-15 partners according to their share in the total of partner areas that integrate extra-EU-15 (D4).

$$X_{n/partner}^{DK} = X_{n/partner}^{DK} + X_{n/Z8}^{DK} \times \left[\frac{993_{n/partner}^{DK}}{993_{n/D4}^{DK}} \right]$$

where $X \in \{214, 268, 310, 320, 379\}$ with $n \in \{1999, 2001\}$

$X \in \{249, 310, 320\}$ with $n \in \{2000\}$

$partner \in \{\text{all extra-EU partners}\}$

Afterwards, items *transportation* (205 - not in 2000), *services* (200), *other services* (981), *income* (300) and *current account* (993) were corrected accordingly as they include the modified sub-items for the years 1999-2001.

Germany

National data provider:

Deutsche Bundesbank

Methodology applied at national level:

BPM5

Data collection system:

The system: The general reporting system is an open international transactions reporting system (ITRS)

Main sources: In the case of outgoing payments via resident banks, the customer has to fill in a payment order and provide the statistical information required in this form. A copy is sent to the Deutsche Bundesbank. All other payments as well as all receipts have to be reported directly to the Deutsche Bundesbank.

National publication:

Deutsche Bundesbank, Zahlungsbilanzstatistik

Deutsche Bundesbank, Balance of Payments by Region

Deutsche Bundesbank, Zahlungsbilanzstatistik, Statistisches Beiheft zum Monatsbericht 3

Member State contact:

Ms Almut Steger, Ms Sabine Guschwa.

New data provided to Eurostat:	2001		
Revised data provided to Eurostat:	1998 to 2000		
ITS: percentage of intervention by Eurostat to calculate EU aggregates	1998-01:		5%
GBR: percentage of intervention by Eurostat to calculate EU aggregates	1998-01:		12%

The data concerning the years 1991 to 1997 correspond to the figures published in the Eurostat publications "International Trade in Services: EU, 1991-00", and "Geographical Breakdown of the Current Account: EU, 1997-00". The estimation procedures carried out for these years can be found in the "International Trade in Services, Compilation guide", December 2001 edition.

Intra-EU/euro-zone imports of goods are allocated geographically according to country of consignment from 1995 onwards. However, for the calculation of aggregates, Eurostat converted 1992 – 1994 import of goods data from origin to consignment principle.

1998 - 2001 Data

270 - Merchenting:

Merchanting was recorded on a gross basis. This item has been recalculated in net terms, because it is considered that the value of this service is the profit or loss on the transaction, i.e., the difference between the purchase price and the resale price. The final purchaser is taken to be the only party paying for the service. This amount has been allocated to the credit side. On the other side, all debits have been set to zero.

$$270_{n/partner}^{net\ DE/Credit} = 270_{n/partner}^{gross\ DE/Credit} - 270_{n/partner}^{gross\ DE/Debit}$$

$$270_{n/partner}^{net\ DE/Debit} = 0$$

$$270_{n/partner}^{net\ DE/Net} = 270_{n/partner}^{net\ DE/Credit}$$

where partner \in {A1, D2, D4, U2, U4, CA, US, JP}

n \in {1998 to 2001}

271 - Other trade-related services:

This item was recalculated as the difference between *merchanting and other trade-related services* (269) and *merchanting* (270) in order to take into account the variation in item *merchanting*.

n 236 - Travel;

288 - Audio-visual and related services;

n 289 - Other personal, cultural and recreational services:

Items *audio-visual and related services* (288) and *other personal, cultural and recreational services* (289) were not provided by Germany. Item 288 is believed to be equal to aggregate *personal, cultural and recreational services* (287). *Other personal, cultural and recreational services* (believed to be included in item travel) will not be published in the country tables, as requested by Germany.

For the European Union aggregate, item 289 was estimated according to its average share in the total "*travel* (236) + *other personal, cultural and recreational services* (289)" for other reporters and on the period 1998 – 2001. This average share has been applied to item 236 on the period 1998 – 2001.

Although requested only for ITS partners, item 289 was estimated for all GBR partners in order to correct the values of items *travel* (236) and *personal, cultural and recreational services* (287).

$$288_{n/partner}^{DE} = 287_{n/partner}^{DE}$$

$$289_{n/partner}^{DE} = 236_{n/partner}^{DE} \times \underset{n}{average} \left[\underset{a \in MS}{average} \left(\frac{289_{n/A1}^a}{(236_{n/A1}^a + 289_{n/A1}^a)} \right) \right]$$

where MS = {ES, FR, IT, NL, AT, PT, GB}

partner \in {all GBR partners}

n \in {1998 to 2001}

This estimate was then subtracted from *travel* (236) and added to the aggregate *personal, cultural and recreational services* (287).

Geographical breakdown

OECD countries (A8):

Partner Slovakia (SK) has been considered as part of the OECD, while it became an OECD member only in 2001.

Eurostat subtracted this partner from the definition of the OECD partner zone, for the period 1998 to 2000.

$$X_{n/A8}^{DE, \text{Corrected}} = X_{n/A8}^{DE, \text{Original}} - X_{n/SK}^{DE}$$

where $X \in \{\text{all GBR posts}\}$

$n \in \{1998 \text{ to } 2000\}$

Mediterranean countries in the Euro-Mediterranean Partnership (D7):

The partner zone D7 was calculated as the sum of the countries making up this zone.

$$X_{n/D7}^{DE} = \sum_{p \in \text{partner}} X_{n/p}^{DE}$$

where $X \in \{\text{all GBR posts}\}$

$n \in \{1998 \text{ to } 2001\}$

$\text{partner} \in \{\text{CY, MT, IL, TR, C7, C8}\}$

Percentage of intervention for Germany

288, 289	4	2	8	64	4	2	51	408
OECD					3	23	1	69
D7					4	23	1	92
TOTAL				96				569

Percentage of intervention for the year 1998 (1998 production published in 2000)

% of intervention ITS: 11%

% of intervention GBR: 9%

Percentage of intervention for the year 1999 (1999 production published in 2001)

% of intervention ITS: 11%

% of intervention GBR: 9%

Percentage of intervention for the year 2000 (2000 production published in 2002)*

% of intervention ITS: 5%

% of intervention GBR: 13%

Percentage of intervention for the year 2001 (2001 production published in 2003)*

% of intervention ITS: 5%

% of intervention GBR: 12%

* In this issue of the compilation guide, related items of *merchandising; audio-visual and related services; other personal, cultural and recreational services* (namely: *other trade-related services; travel; personal, cultural and recreational services*) haven't been taken into account for the calculation of the percentages of intervention on the German data. Thus, the percentage of intervention tended to decrease in comparison to the 1999 production.

Greece

National data provider:

Bank of Greece

Methodology applied at national level:

BPM5

Data collection system:

The system: Basically, a settlements closed system

Main sources: Bank reporting and direct declaring.

Monthly Bulletin of Conjunctural Indicators

Member State contact:

Mr Andreas Karapapas, Mr Evangelos Pantelidis

New data provided to Eurostat: 2001

Revised data provided to Eurostat: None

ITS: percentage of intervention by Eurostat to calculate EU-15 2001: 11%

GBR: percentage of intervention by Eurostat to calculate EU-15 2001: 4%

The data concerning the years 1990 to 2000 correspond to the figures published in the Eurostat publications "International Trade in Services: EU, 1991-00", and "Geographical Breakdown of the Current Account: EU, 1997-00". The estimation procedures carried out for these years can be found in the "International Trade in Services EU, 1991-00 Compilation guide", December 2001.

2001 Data

270 - Merchenting:

Merchanting was recorded on a gross basis. This item has been recalculated in net terms, because it is considered that the value of this service is the profit or loss on the transaction, i.e., the difference between the purchase price and the resale price. The final purchaser is taken to be the only party paying for the service. This amount has been allocated to the credit side. On the other side, all debits have been set to zero.

$$270_{n/partner}^{net\ GR/Credit} = 270_{n/partner}^{gross\ GR/Credit} - 270_{n/partner}^{gross\ GR/Debit}$$

$$270_{n/partner}^{net\ GR/Debit} = 0$$

$$270_{n/partner}^{net\ GR/Net} = 270_{n/partner}^{net\ GR/Credit}$$

where partner \in {A1, D2, D4, U2, U4, CA, US, JP}

n \in {2001}

271 - Other trade-related services:

This item was recalculated as the difference between *merchanting and other trade-related services* (269) and *merchanting* (270) in order to take into account the variation in item *merchanting*.

211 - Passenger transport by air;

212 - Freight transport by air;

213 - Supporting, auxiliary and other services:

Eurostat estimated the breakdown of *air transport* (210) by using the average share of each missing item in the aggregate item *air transport* as provided Member States for partner World.

$$X_{n/partner}^{GR} = 210_{n/partner}^{GR} \times \underset{a \in MS_1}{average} \left[\frac{X_{n/A1}^a}{210_{n/A1}^a} \right]$$

where X \in {211, 212, 213}

n \in {2001}

MS₁ = {A3, DK, DE, ES, FR, IE, IT, NL, AT, PT, GB}

partner \in {A1, D2, D4, U2, U4, CA, US, JP}

280 - Architectural, engineering and other technical consultancy;

281 - Agricultural, mining and on-site processing services:

These items were estimated by using their average share in the sum of *other miscellaneous business, professional and technical services* (284), *architectural, engineering and other technical consultancy* (280) and *agricultural, mining and on-site processing services* (281) for partner world as reported by seven other Member States.

$$X_{n/partner}^{GR} = 284_{n/partner}^{GR} \times \underset{a \in MS}{average} \left[\frac{X_{n/A1}^a}{284_{n/A1}^a + 280_{n/A1}^a + 281_{n/A1}^a} \right]$$

where $n \in \{2001\}$

$MS = \{A3, DE, ES, IT, AT, PT, GB\}$

$X \in \{280, 281\}$

partner $\in \{A1, D2, D4, U2, U4, CA, US, JP\}$

Then, item 284, *other miscellaneous businesses, professional and technical services*, was recalculated subtracting 280 and 281 from the initial value of 284.

288 - Audio-visual and recreational services:

289 - Other personal, cultural and recreational services:

The sub-items of *Personal, cultural and recreational services* (287) were estimated for the year 2001 with partner USA by applying their average share in the total *Personal, cultural and recreational services* as given in the former revised years with partner USA.

$$X_{01/US}^{GR} = 287_{01/US}^{GR} \times \underset{t \in T}{\text{average}} \left(\frac{X_{t/US}^{GR}}{287_{t/US}^{GR}} \right)$$

where $X \in \{288, 289\}$

$T = \{1999, 2000\}$

Geographical breakdown:

ACP countries (B5)

In the data provided this zone was not equal to the sum of its sub-components; moreover the sub-aggregate *Pacific ACP countries* (B8) was wrongly calculated without the inclusion of partners *Federated States of Micronesia* (FM), *Marshall Islands* (MH), *Nauru* (NR) and *Palau* (PW) that joined this economic zone in 2000. Therefore, Eurostat corrected the aggregate *ACP countries* (B5) as the sum of the countries and areas that make it up (by taking into account the correction of partner B8).

$$X_{n/B5}^{GR} = X_{n/B6}^{GR} + X_{n/B7}^{GR} + \left\{ X_{n/B8}^{GR} + \left[(993_{n/FM}^{GR} + 993_{n/MH}^{GR} + 993_{n/NR}^{GR} + 993_{n/PW}^{GR}) / 993_{n/B8}^{GR} \right] * X_{n/B8}^{GR} \right\}$$

where $X \in \{\text{all GBR items}\}$

$n \in \{2001\}$

OECD Countries (A8)

Partner Slovakia (SK) was not included in the aggregate A8, while it became an OECD member in 2001. Eurostat added this partner from the definition of the OECD partner zone for the period concerned.

$$X_{n/A8}^{GR} = X_{n/A8}^{GR} + X_{n/SK}^{GR}$$

where $X \in \{\text{all GBR items}\}$

$n = \{2001\}$

Percentage of intervention for Greece

Ms. María Luisa López Sturm

New data provided to Eurostat: 2001

Revised data provided to Eurostat: 2000

ITS: percentage of intervention by Eurostat to calculate EU aggregates 2000-2001: 0%

GBR: percentage of intervention by Eurostat to calculate EU aggregates 2000: 1%

2001: 2%

The data concerning the years 1992 to 1999 correspond to the figures published in the Eurostat publication "International Trade in Services: EU, 1991-2000" and "Geographical Breakdown of the Current Account EU, 1997-2000". The estimation procedures carried out for these years can be found in the "International Trade in Services EU, 1991-2000 Compilation guide", December 2001.

2000 - 2001 Data

Geographical breakdown:

ACP countries (B5)

Partners Federated States of Micronesia (FM), Marshall Islands (MH), Nauru (NR) and Palau (PW) were not included in partner zone ACP in 2001. Eurostat added these partners to the ACP partner zone provided, for the year 2001.

$$X_{2001/B5}^{ES, \text{Corrected}} = X_{2001/B5}^{ES, \text{Original}} + \sum_{p \in \text{partner}} X_{2001/p}^{ES}$$

where $X \in \{\text{all GBR items}\}$

partner $\in \{\text{FM, MH, NR, PW}\}$

Partner South Africa, which joined the ACP countries in 1998, was not included in this partner zone on that year. Eurostat added South Africa to the ACP partner zone provided, for the year 1998.

$$X_{1998/B5}^{ES, \text{Corrected}} = X_{1998/B5}^{ES, \text{Original}} + X_{1998/ZA}^{ES}$$

where $X \in \{\text{all GBR items}\}$

Oceania and Polar regions (F7)

In the data provided this partner zone was not equal to the sum of its components in the year 2000 for credit flows. Therefore, Eurostat recalculated this partner zone as the sum of the entities that make it up.

$$X_{2000/F7}^{ES, \text{Credit}} = \sum_{p \in \text{partner}} X_{2000/p}^{ES, \text{Credit}}$$

where $X \in \{\text{all GBR items}\}$

partner $\in \{\text{AU, FJ, FM, KI, MH, MP, NC, NR, NZ, PF, PG, PN, PW, SB, TO, TV, VU, WF, WS, F8, F9, G1, G2}\}$

Mediterranean countries in the Euro-Mediterranean Partnership (F7)

Partner D7 was missing in the data transmission. Hence, Eurostat calculated it as the sum of its components.

$$X_{n/D7}^{ES} = \sum_{p \in \text{partner}} X_{n/p}^{ES}$$

where $X \in \{\text{all GBR items}\}$

$n \in \{2000, 2001\}$

partner $\in \{\text{CY, IL, MT, TR, C7, C8}\}$

n Years 2000-2001. World not allocated flows (Z1) for items *investment income* (320), *income* (300) and *current account* (993).

The not allocated flows for item *investment income* (320) and related items were added to intra-EU-15 and extra-EU-15 according to their share in the total of extra-EU-15 (D4) plus EU Member States not belonging to intra-EU-11 (U3). Partner OECD (A8) was corrected accordingly as it includes intra-EU-15 (D2).

$$X_{n/U3}^{ES} = X_{n/D2}^{ES} - X_{n/U2}^{ES}$$

where $X \in \{\text{all ITS items}\}$

$n = \{2000, 2001\}$

$$X_{n/D2}^{ES} = X_{n/D2}^{ES} + 320_{n/Z1}^{ES} * 320_{n/U3}^{ES} / [320_{n/U3}^{ES} + 320_{n/D4}^{ES}]$$

$$X_{n/D4}^{ES} = X_{n/D4}^{ES} + 320_{n/Z1}^{ES} * 320_{n/D4}^{ES} / [320_{n/U3}^{ES} + 320_{n/D4}^{ES}]$$

where $X \in \{320, 300, 993\}$

$n = \{2000, 2001\}$

New data provided to Eurostat: 2001

Revised data provided to Eurostat: 2000

ITS: percentage of intervention by Eurostat to calculate the EU aggregates 2000-01: 32%

GBR: percentage of intervention by Eurostat to calculate the EU aggregates 2000-01: 6%

The data concerning the years 1991 to 1999 correspond to the figures published in the EUROSTAT publications "International Trade in Services: EU, 1991-00" and "Geographical Breakdown of the Current Account: EU, 1997-00". The estimation procedures carried out for these years can be found in the "International Trade in Services, Compilation Guide", December 2001 edition.

2000-2001 Data

223 – Road transport;

227 – Inland waterway transport;

231 – Pipeline transport;

France provided two of the sub-items composing the aggregate 214, *other transport* (other than sea and air):

Ø *Space transport* (218), and

Ø *Rail transport* (219).

This information was taken into account in order to estimate the other three items of this breakdown listed above. The missing items were estimated using their share in the difference between the aggregate 214 and the available sub-items 218 and 219 as reported by France in 1999 for partner World.

$$X_{n/partner}^{FR} = \left(214_{n/partner}^{FR} - 218_{n/partner}^{FR} - 219_{n/partner}^{FR} \right) \times \frac{X_{99/A1}^{FR}}{214_{99/A1}^{FR} - 218_{99/A1}^{FR} - 219_{99/A1}^{FR}}$$

where $X \in \{223, 227, 231\}$

partner $\in \{\text{all ITS partners}\}$

n = {2000 and 2001}

246 – Postal and courier services;

247 – Telecommunication services;

The breakdown of item *communications services* (245) was estimated by Eurostat by applying the share of the missing items in the aggregate 245 as reported by France in 1999 for partner World.

$$X_{n/partner}^{FR} = 245_{n/partner}^{FR} \times \frac{X_{99/A1}^{FR}}{245_{99/A1}^{FR}}$$

where $X \in \{246, 247\}$

partner $\in \{\text{all ITS partners}\}$

n = {2000 and 2001}

250 – Construction abroad;

251 – Construction in the compiling economy;

The breakdown of item *construction services* (249) was estimated by Eurostat by applying the share of the missing items in the aggregate 249, as reported by France in 1999 for partner World.

$$X_{n/partner}^{FR} = 249_{n/partner}^{FR} \times \frac{X_{99/A1}^{FR}}{249_{99/A1}^{FR}}$$

where $X \in \{250, 251\}$

partner $\in \{\text{all ITS partners}\}$

n = {2000 and 2001}

263 – Computer services;
264 – Information services;

The breakdown of item *computer and information services* (262) was estimated by Eurostat by applying the share of the missing items in the aggregate 262 as reported by France in 1999 for partner World.

$$X_{n/partner}^{FR} = 262_{n/partner}^{FR} \times \frac{X_{99/A1}^{FR}}{262_{99/A1}^{FR}}$$

where $X \in \{263, 264\}$

partner $\in \{\text{all ITS partners}\}$

n = {2000 and 2001}

274 - Legal, accounting, management, consulting and public relations services;
279 - Research and development services;
280 - Architectural, engineering and other technical services;
281 - Agricultural, mining and on-site processing services;
284 - Other - Miscellaneous business, professional and technical services:

France provided two of the sub-items composing the aggregate *miscellaneous business, professional and technical services* (273):

∅ *Advertising, market research and public opinion polling* (278), and

∅ *Services between affiliated enterprises, n.i.e.* (285).

This information was taken into account in order to estimate the rest of the items of this breakdown. The missing items were estimated using their average share in the difference between the aggregate 273 and the available sub-items 278 and 285 as provided by seven other reporters for partner World.

$$X_{n/partner}^{FR} = \left(273_{n/partner}^{FR} - 278_{n/partner}^{FR} - 285_{n/partner}^{FR} \right) \times \underset{a \in MS_1}{\text{average}} \left[\frac{X_{n/A1}^a}{273_{n/A1}^a - 278_{n/A1}^a - 285_{n/A1}^a} \right]$$

where $MS_1 = \{DE, ES, IT, AT, PT, GB\}$

$X \in \{274, 279, 280, 281, 284\}$

partner $\in \{\text{all ITS partners}\}$

n = {2000 and 2001}

OECD countries (A8)

Partner Slovakia (SK) has not been considered as part of the OECD, while it became an OECD member in 2001.

Eurostat added this partner to the definition of the OECD partner zone, for 2001.

$$X_{01/A8}^{FR} = X_{01/A8}^{Original} + X_{01/SK}^{FR}$$

where $X \in \{\text{all GBR posts}\}$

Candidate Countries (D6)

The partner zone D6 was calculated as the sum of the countries making up this zone.

$$X_{n/D6}^{FR} = \sum_{p \in \text{partner}} X_{n/p}^{FR}$$

where $X \in \{\text{all GBR posts}\}$

$n \in \{2000 \text{ and } 2001\}$

$\text{partner} \in \{\text{BG, CY, CZ, EE, HU, LV, LT, MT, PL, RO, SI, SK, TR}\}$

Mediterranean countries in the Euro-Mediterranean Partnership (D7)

The partner zone D7 was calculated as the sum of the countries making up this zone.

$$X_{n/D7}^{FR} = \sum_{p \in \text{partner}} X_{n/p}^{FR}$$

where $X \in \{\text{all GBR posts}\}$

$n \in \{2000 \text{ and } 2001\}$

$\text{partner} \in \{\text{CY, MT, IL, TR, C7, C8}\}$

Intra and extra-Euro-zone (U2 and U4)

Partner Greece (GR) has been considered as part of the Euro-zone, while it became a Euro-zone member only in 2001. Eurostat subtracted this partner from the definition of the Euro-zone, and added it to the extra-Euro-zone, for the year 2000.

$$X_{00/U2}^{FR, \text{Corrected}} = X_{00/U2}^{FR, \text{Original}} - X_{00/GR}^{FR}$$

$$X_{00/U4}^{FR, \text{Corrected}} = X_{00/U4}^{FR, \text{Original}} + X_{00/GR}^{FR}$$

where $X \in \{\text{all ITS posts}\}$

International Organisations excluding European Union Institutions (7Z)

This partner was missing in 2001. Eurostat recalculated it as the difference between Extra-EU-15 and its available sub-components.

$$X_{01/7Z}^{FR} = X_{01/D4}^{FR} - \sum_{p \in \text{partner}} X_{01/p}^{FR}$$

where $X \in \{\text{all GBR posts}\}$

$\text{partner} \in \{\text{A5, E2, E4, E7, F2, F7}\}$

Member State contact:

Mr John Fitzpatrick

New data provided to Eurostat: 2001

Revised data provided to Eurostat: None

ITS: percentage of intervention by Eurostat to calculate EU aggregates 2001: 36%

GBR: percentage of intervention by Eurostat to calculate EU aggregates 2001: 84%

The data concerning the years 1991 to 2000 correspond to the figures published in the Eurostat publications "International Trade in Services: EU, 1991-00", and "Geographical Breakdown of the Current Account: EU, 1997-00". The estimation procedures carried out for these years, including those adopted by Eurostat for missing data, can be found in the "International Trade in Services EU, 1991-00 Compilation guide", December 2001.

2000 Data

Euro 12 (I2) and extra-Euro 12 (J2)

Eurostat had to estimate for Greece (GR) the breakdown of services and add it to the intra-Euro-zone (U2) to obtain the Euro 12 (I2).

The breakdown of item *services* (200) for Greece was estimated by Eurostat using the average share of each missing item in the aggregate *services* (200) as provided by four other reporters.

$$X_{00/GR}^{IE} = 200_{00/GR}^{IE} \times \underset{a \in MS}{average} \left[\frac{X_{00/GR}^a}{200_{00/GR}^a} \right]$$

where MS = {A3, DE, AT, PT }

X ∈ {205, 206, 210, 214, 218, 219, 223, 227, 231, 232, 236, 245, 249, 253, 260, 262, 266, 268, 287, 291}

Then partner Greece has been added to intra-Euro-zone (U2) to obtain Euro 12 (I2) and subtracted from extra-Euro-zone (U4) to obtain extra-Euro 12 (J2)

2001 Data

Ireland sent new 2001 quarterly data, with a geographical breakdown at level 1. The following estimations concern only the partners belonging to level 1 (namely: World, intra-EU-15, extra-EU-15, intra-EUR-11, extra-EUR-11, Canada, USA, Japan and EFTA). The full geographical breakdown has been estimated afterwards.

218 - Space transport

219 - Rail transport;

223 - Road transport;

227 - Inland waterways transport;

231 - Pipeline transport:

Ireland provided item *other transportation* (214) with partners of level 1. Transactions in *Space transport* (218), *Inland waterways transport* (227) and *Pipeline transport* (231) were set to zero by Eurostat.

The remaining publishable breakdown of item *other transportation* (214) was estimated by Eurostat using the average share of each missing item in the aggregate item *other transportation* as provided by other Member States for partner World.

$$X_{01/partner}^{IE} = 214_{01/partner}^{IE} \times \underset{a \in MS}{average} \left[\frac{X_{01/A1}^a}{214_{01/A1}^a} \right]$$

where MS = { DE, GR, ES, IT, NL, AT, PT }

X ∈ {219, 223}

partner ∈ {A1, D2, D4, U2, U4, CA, US, JP, A5}

250 - Construction abroad;

251 - Construction in the reporting economy:

These missing items are the sub-items of *construction services* (249). Eurostat estimated them by applying the average structure of *construction services* as given by other Member States for partner World.

$$X_{01/partner}^{IE} = 249_{01/partner}^{IE} \times \underset{a \in MS}{average} \left[\frac{X_{01/A1}^a}{249_{01/A1}^a} \right]$$

where MS = {DE, GR, ES, IT, NL, AT, PT }

X ∈ {250, 251}

partner ∈ {A1, D2, D4, U2, U4, CA, US, JP, A5}

263 - Computer services;

264 - Information services:

These missing items are the sub-items of *computer and information services* (262). Transactions in *information services* (264) were set to zero whereas item *computer services* (263) was set equal to the corresponding aggregate *computer and information services* (262).

$$263_{01/partner}^{IE} = 262_{01/partner}^{IE}$$

where partner ∈ {A1, D2, D4, U2, U4, CA, US, JP, A5}

270 - Merchanting;

271 - Other trade-related services:

Items *merchanting* (270) and *other trade-related services* (271) were estimated by using their average size in the aggregate *merchanting and other trade-related services* (269) as given by other Member States for partner World.

$$X_{01/partner}^{IE} = 269_{01/partner}^{IE} \times \underset{a \in MS}{average} \left[\frac{X_{01/A1}^a}{269_{01/A1}^a} \right]$$

where MS = {ES, FR, IT, NL, AT }

X ∈ {270, 271}

partner ∈ {A1, D2, D4, U2, U4, CA, US, JP, A5}

274 - Legal, accounting, management, consulting and technical services;

278 - Advertising, market research and public opinion polling;

279 - Research and development services;

280 - Architectural, engineering and other technical services;

281 - Agricultural, mining and on-site processing services;

284 - Other business services other;

285 - Services between affiliated enterprises:

The breakdown of *Miscellaneous business, professional and technical services* (273) was estimated by applying the average structure of *miscellaneous business, professional and technical services* (273) as given by other Member States for partner World.

$$X_{01/partner}^{IE} = 273_{01/partner}^{IE} \times \underset{a \in MS}{average} \left[\frac{X_{01/A1}^a}{273_{01/A1}^a} \right]$$

where MS = {A3, DE, ES, IT, AT, PT}
 X ∈ {274, 278, 279, 280, 281, 284, 285}
 partner ∈ {A1, D2, D4, U2, U4, CA, US, JP, A5}

289 - Other personal, cultural and recreational services:

This missing item was set equal to zero by Eurostat because the aggregate *personal, cultural and recreational services* (287) was equal to the item *audio-visual and related services* (288).

n All GBR items, all GBR partners

All GBR partners (except the partners that include or are included in intra-EU-15, Canada, USA, Japan and the EFTA countries) were obtained by using their average size in the difference between extra-EU-15 (D4) and Canada, USA, Japan and EFTA as reported by other Member States for the current account (993).

$$X_{01/Partner}^{IE} = \left(X_{01/D4}^{IE} - X_{01/CA}^{IE} - X_{01/US}^{IE} - X_{01/JP}^{IE} - X_{01/A5}^{IE} \right) \times$$

$$average_{a \in MS} \left[\frac{993_{01/Partner}^a}{993_{01/D4}^a - 993_{01/CA}^a - 993_{01/US}^a - 993_{01/JP}^a - 993_{01/A5}^a} \right]$$

where MS = {DE, GR, ES, FR, IT, NL, AT, PT}
 X ∈ {all GBR items}
 partner ∈ {all GBR partners but A8, E7, F6, F2, B1, A5, CH, NO, LI}

n All GBR items: Switzerland (CH), Norway (NO) and Liechtenstein (LI)

Partners Switzerland (CH), Norway (NO) and Liechtenstein (LI) were obtained by using the average size of their amounts in the aggregate EFTA (A5) as given by other Member States for the current account (993).

$$X_{01/partner}^{IE} = \left(X_{01/A5}^{IE} \right) \times average_{a \in MS} \left[\frac{993_{01/partner}^a}{993_{01/A5}^a} \right]$$

where MS = {DE, GR, ES, FR, IT, NL, AT, PT}
 X ∈ {all GBR items}
 partner ∈ {CH, NO, LI}

n All GBR items: OECD countries (A8)

The partner zone OECD countries (A8) was calculated by combining the countries making up this zone.

$$X_{01/A8}^{IE} = \sum X_{01/partner}^{IE} - X_{01/LI}^{IE}$$

where X ∈ {all GBR items}
 partner ∈ {D2, CZ, HU, PL, TR, CA, US, MX, JP, AU, NZ, A5, KR, SK}

n All GBR items: America (E7)

The partner zone America (E7) was calculated as the sum of the countries making up this zone.

$$X_{01/E7}^{IE} = \sum X_{01/partner}^{IE}$$

where $X \in \{\text{all GBR items}\}$

partner $\in \{\text{CA, US, E9, F1}\}$

n All GBR items: Other Asian countries (F6)

Eurostat estimated first the zone Other Asian countries excluding Japan by using the average size of Other Asian countries excluding Japan in the difference between the extra-EU and Canada, USA, Japan, and the EFTA countries as given by other Member states.

$$X_{01/F6-JP}^{IE} = \left(X_{01/D4}^{IE} - X_{01/CA}^{IE} - X_{01/US}^{IE} - X_{01/JP}^{IE} - X_{01/A5}^{IE} \right) \times$$

$$\underset{a \in MS}{\text{average}} \left[\frac{993_{01/F6}^a - 993_{01/JP}^a}{993_{01/D4}^a - 993_{01/CA}^a - 993_{01/US}^a - 993_{01/JP}^a - 993_{01/A5}^a} \right]$$

where $X \in \{\text{all GBR items}\}$

MS $\in \{\text{DE, GR, ES, FR, IT, NL, AT, PT}\}$

Partner "other Asian countries" was then calculated by adding partner Japan to the estimated zone "Other Asian countries excluding Japan".

$$X_{01/F6}^{IE} = X_{01/F6-JP}^{IE} + X_{01/JP}^{IE}$$

where $X \in \{\text{all GBR items}\}$

n All GBR items: Asia (F2)

The partner zone Asia (F2) was calculated as the sum of the countries making up this zone.

$$X_{01/F2}^{IE} = \sum X_{01/partner}^{IE}$$

where $X \in \{\text{all GBR items}\}$

partner $\in \{\text{F3, F6}\}$

n All GBR items: NAFTA (B1)

The economical zone NAFTA (B1) was calculated as the sum of the countries making up this zone.

$$X_{01/B1}^{IE} = \sum X_{01/partner}^{IE}$$

where $X \in \{\text{all GBR items}\}$

partner $\in \{\text{CA, MX, US}\}$

n All GBR items: Candidate countries (D6)

The economic zone Candidate countries (D6) was calculated as the sum of the countries making up this zone

$$X_{01/D6}^{IE} = \sum X_{01/partner}^{IE}$$

where $X \in \{\text{all GBR items}\}$

partner $\in \{\text{BG, CY, CZ, EE, HU, LV, LT, MT, PL, RO, SI, SK, TR}\}$

n All GBR items: Mediterranean countries in the Euro-Mediterranean Partnership (D7)

The economic zone Mediterranean countries in the Euro-Mediterranean Partnership (D7) was calculated as the sum of the countries making up this zone

$$X_{01/D7}^{IE} = \sum X_{01/partner}^{IE}$$

where $X \in \{\text{all GBR items}\}$

partner $\in \{\text{CY, MT, IL, TR, C7, C8}\}$

New data provided to Eurostat: 2001

Revised data provided to Eurostat: 2000

ITS: percentage of intervention by Eurostat to calculate EU aggregates 2000-2001: 2%

GBR: percentage of intervention by Eurostat to calculate EU aggregates 2000-2001: 4%

The data concerning the years 1992 to 1999 correspond to the figures published in the Eurostat publications "International Trade in Services: EU, 1991-2000", and "Geographical Breakdown of the Current Account: EU, 1997-2000". The estimation procedures carried out for these years can be found in the "International Trade in Services, Compilation Guide", December 2001 edition.

In order to avoid the possibility of releasing results different from the ones published at the national level, Austria asked Eurostat not to publish any of Eurostat's corrections under the country heading. Nevertheless, Eurostat has used its estimates for data harmonisation in order to calculate the EU-15 aggregate (marked n).

2000 - 2001 Data

n Distribution of services not allocated (982)

Austria provided a large *services not allocated* (982). In order to calculate the EU aggregates, Eurostat distributed these *services not allocated* among all the other services items that were neither *travel* (236), nor *personal, cultural and recreational services* (287), nor *government services* (291). Item 982 was allocated to these items according to their share in the total *services* (200) minus *travel, personal, cultural and recreational services, government services and services not allocated*, as provided for partner World (A1).

$$X_{n/partner}^{AT, corrected} = X_{n/partner}^{AT, original} + 982_{n/partner}^{AT} \times \left(\frac{X_{n/A1}^{AT}}{200_{n/A1}^{AT} - 236_{n/A1}^{AT} - 287_{n/A1}^{AT} - 291_{n/A1}^{AT} - 982_{n/A1}^{AT}} \right)$$

where $X \in \{205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 223, 227, 231, 232, 245, 246, 247, 249, 250, 251, 253, 260, 262, 263, 264, 266, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 284, 285\}$ for partners A1, D2, D4, U2, U4, US, CA and JP

$\{205, 206, 210, 214, 245, 249, 253, 260, 262, 266, 268\}$ for all other partners

$n \in \{2000, 2001\}$

partner $\in \{\text{all partners}\}$

Then item *other services* (981) was recalculated as the sum of its sub-items and *services not allocated* (982) was set to zero.

Percentage of intervention for Austria

Period: 2000-2001

New data provided to Eurostat:	2001	
Revised data provided to Eurostat:	1999 - 2000	
ITS: percentage of intervention by Eurostat to calculate EU aggregates	1999:	2%
	2000-01:	2%
GBR: percentage of intervention by Eurostat to calculate EU aggregates	1999:	2%
	2000-01:	0%

The data concerning the years 1990 to 1998 correspond to the figures published in the Eurostat publications "International Trade in Services: EU, 1991-00", and "Geographical Breakdown of the Current Account: EU, 1997-00". The estimation procedures carried out for these years can be found in the "International Trade in Services EU, 1991-00 Compilation guide", December 2001.

1999 to 2001 Data

270 - Merchancing;

271 - Other trade-related services:

Merchancing was reported on a gross basis. This item has been recalculated in net terms. The value of this service is the profit or loss on the transaction, i.e., the difference between the purchase price and the resale price. The final purchaser is taken to be the only party paying for the service. It has been considered that only the net value with the World is accurate. This amount has been allocated to the credit side and it has been broken-down geographically following the structure of the gross credits. On the other side, all debits have been set to zero.

$$270_{n/partner}^{PT/Net} = 270_{n/partner}^{PT/Gross/Credit} - 270_{n/partner}^{PT/Gross/Debit}$$

$$270_{n/partner}^{PT/Debit} = 0$$

$$270_{n/partner}^{PT/Net} = 270_{n/partner}^{PT/Net/Credit}$$

where partner \in {A1, D2, D4, U2, U4, CA, US, JP}

$$n = \{1999, 2000, 2001\}$$

Then, Eurostat recalculated item *other trade-related services* (271) as the difference between *merchancing* and *other trade-related services* (269) and *merchancing* (270) to take into account the variation of *merchancing*.

ACP countries (B5)

Partner *South Africa* (ZA) was wrongly excluded in the calculation of the aggregate B5 (*ACP countries*) for the year 1999. Eurostat has corrected this economic zone with the inclusion of partner *South Africa* for the period concerned.

$$X_{n/B5}^{PT} = X_{n/B5}^{PT} + X_{n/ZA}^{PT}$$

where X \in {all GBR items}

$$n = \{1999\}$$

New data provided to Eurostat: 2001

Revised data provided to Eurostat: 2000

ITS: percentage of intervention by Eurostat to calculate EU aggregates 2000-01: 4%

GBR: percentage of intervention by Eurostat to calculate EU aggregates 2000-01: 5%

The data concerning the years 1990 to 1999 correspond to the figures published in the Eurostat publications "International Trade in Services: EU, 1991-00", and "Geographical Breakdown of the Current Account: EU, 1997-00". The estimation procedures carried out for these years can be found in the "International Trade in Services, Compilation guide", December 2001 edition.

2000 - 2001 data:

270 - Merchanting;

271 - Other trade-related services:

These missing items are the sub-items of *merchanting and other trade-related services* (269). They have been estimated according to their average share in this aggregate as given by 11 other Member States for partner World.

$$X_{n/partner}^{FI} = 269_{n/partner}^{FI} \times \underset{a \in MS}{average} \left[\frac{X_{n/A1}^a}{269_{n/A1}^a} \right]$$

where $n \in \{2000, 2001\}$

$X \in \{270, 271\}$

partner $\in \{A1, D2, D4, U2, U4, CA, US, JP\}$

MS = $\{A3, DK, DE, GR, ES, FR, IT, NL, AT, PT, GB\}$

n All GBR items: partner International Organisations excluding European Union Institutions (7Z):

For the calculation of the EU/euro-zone aggregates, all items have been estimated for partner *International Organisations excluding European Union Institutions* (7Z).

First, Eurostat estimated the *current account* (993) with partner 7Z by applying to partner extra-EU (D4) the average weight of partner 7Z in D4 as given by 10 other Member States for this item. The breakdown of the *current account* with partner 7Z was then estimated by applying the breakdown of the *current account* as it had been estimated last year for partner 7Z.

$$993_{n/7Z}^{FI} = 993_{n/D4}^{FI} \times \underset{a \in MS}{average} \left[\frac{993_{n/7Z}^a}{993_{n/D4}^a} \right]$$

$$X_{n/7Z}^{FI} = 993_{n/7Z}^{FI} \times \left(\frac{X_{99/7Z}^{FI}}{993_{99/7Z}^{FI}} \right)$$

where $n \in \{2000, 2001\}$

$X \in \{\text{all GBR items but 993}\}$

MS = $\{A3, DE, GR, ES, FR, IT, NL, AT, PT, GB\}$

n Large extra-EU non-allocated flows (Z8):

Some items showed large EU unallocated flows. These were:

- *Construction services* (249)
- *Royalties and license fees* (266)
- *Merchanting and other trade-related services* (269).

Eurostat distributed the geographically non-allocated flows on the major extra-EU geographical areas, only on data used for the calculation of the EU/euro-zone aggregates (these corrections will not appear in tables published under the heading "Reporter: Finland").

For the above-mentioned items, Eurostat corrected data given for partners:

- EFTA (A5),
- Other European countries (E2),
- Africa (E4),
- North Africa (E5),
- Other African countries (E6),
- America (E7),

- Central American countries (E9),
- South American countries (F1),
- Asia (F2),
- Near and Middle East countries (F3),
- Other Near and Middle East countries (F5),
- Other Asian countries (F6) and
- Oceania and Polar regions (F7).

For the given items, Eurostat added to each of the above-mentioned partners a proportion of Z8 calculated on the basis of the partner's share in the total reported extra-EU flows.

$$X_{n/partner}^{FI, corrected} = X_{n/partner}^{FI, original} + X_{n/Z8}^{FI} \times \left(\frac{X_{n/partner}^{FI, original}}{X_{n/D4}^{FI}} \right)$$

where $n \in \{2000, 2001\}$

$X \in \{249, 266, 269\}$

partner $\in \{A5, E2, E4, E5, E6, E7, E9, F1, F2, F3, F5, F6, F7\}$

The aggregates *other business services* (268), *services* (200) and *current account* (993) were then recalculated to take into account these Z8 reallocations.

Sweden

National data provider:

Sveriges Riksbank

Methodology applied at national level:

BPM5

Data collection system:

The system: A direct reporting system supported by settlements data

Main sources: Direct reporting companies (including Monetary Financial institutions): payments through the banking system.

Settlements reported by financial institutions and by accounts holders in non-resident financial institutions, international netting/clearing.

National publication:

Annual report, Sveriges Riksbank

Member State contact:

Mr Lars Forss, Mr Gunnar Blomberg

New data provided to Eurostat: 2001

Revised data provided to Eurostat: None

ITS: percentage of intervention by Eurostat to calculate EU-15 2001: 7%

GBR: percentage of intervention by Eurostat to calculate EU-15 2001: 30%

The data concerning the years 1992 to 2000 correspond to the figures published in the Eurostat publications "International Trade in Services: EU, 1991-00", and "Geographical Breakdown of the Current Account: EU, 1997-00". The estimation procedures carried out for these years can be found in the "International Trade in Services, Compilation guide", December 2001 edition.

Intra-EU imports of goods are allocated geographically according to country of consignment from 1995 onwards.

2001 Data

993 - Current Account

200 - Total Services

205 - Transportation

214 - Other Transport

215 - Passenger on other transport

216 - Freight on other transport

217 - Other of other transport

Eurostat has recalculated the breakdown of item Other Transport (214) for credit and partner A1 after receiving a revision for the post Passenger on Road (224) without further revisions for the other posts.

$$X_{n/A1}^{new\ SE/Credit} = (224_{n/A1}^{new\ SE/Credit} - 224_{n/A1}^{SE/Credit}) \times share(X_{n/A1}^{SE/Credit} / 214_{n/A1}^{SE/Credit}) + X_{n/A1}^{SE/Credit}$$

where $X \in \{215, 216, 217\}$

$n \in \{2001\}$

Then the posts Current Account (993), Total Services (200) and Transportation (205) were recalculated taking into account the values obtained in the previous step.

Geographical breakdown

World (A1 - all entities)

Eurostat recalculated A1 as the sum of partners EU-15 (D2) and Extra EU-15 (D4).

$$X_{n/A1}^{SE} = \sum X_{n/partner}^{SE}$$

where $X \in \{\text{all GBR posts}\}$

$partner \in \{D2, D4\}$

$n \in \{2001\}$

North American Free Trade Association (B1)

Eurostat recalculated NAFTA as the sum of the countries making up this zone.

$$X_{n/B1}^{SE} = \sum X_{n/partner}^{SE}$$

where $X \in \{\text{all GBR posts}\}$

$partner \in \{CA, MX, US\}$

$n \in \{2001\}$

OECD countries (A8)

The partner zone OECD countries (A8) was calculated as the sum of the countries making up this zone.

$$X_{n/A8}^{SE} = \sum X_{n/partner}^{SE} - X_{n/LI}^{SE}$$

where $X \in \{\text{all GBR posts}\}$
 $\text{partner} \in \{\text{AU, CA, A5, CZ, HU, JP, KR, MX, NZ, PL, TR, US, D2, SK}\}$
 $n \in \{2001\}$

Mercosur (C2)

The partner zone Mercosur (C2) was calculated as the sum of the countries making up this zone.

$$X_{n/C2}^{SE} = \sum X_{n/partner}^{SE}$$

where $X \in \{\text{all GBR posts}\}$
 $\text{partner} \in \{\text{MX, CL, AR, BR}\}$
 $n \in \{2001\}$

Extra-EU-15 not allocated (Z8)

The not allocated flows provided for extra-EU-15 (Z8) were reallocated to the extra-EU-15 partners according to their share in the total of partner areas that integrate extra-EU-15 (D4).

$$X_{n/partner}^{SE} = X_{n/partner}^{SE} + X_{n/Z8}^{SE} \times \left[\frac{993_{n/partner}^{SE}}{993_{n/D4}^{SE}} \right]$$

where $X \in \{206, 236, 268, 320\}$
 $n \in \{2001\}$
 $\text{partner} \in \{\text{all GBR partners}\}$

Treatment of the confidential values

Eurostat had to hide some data so as the users can not be able to recalculate the confidential data provided by Sweden.

New data provided to Eurostat: 2001

Revised data provided to Eurostat: 1996-2000

ITS: percentage of intervention by Eurostat to calculate EU aggregates:

1996-1997:	4%
1998-1999:	7%
2000-2001:	7%

ITS: percentage of intervention by Eurostat to calculate EU aggregates:

1996-1997:	19%
1998-1999:	19%
2000-2001:	19%

The data concerning the years 1992 to 1995 correspond to the figures published in the Eurostat publication "International Trade in Services: EU, 1991-2000". The estimation procedures carried out for these years can be found in the "International Trade in Services, Compilation Guide", December 2001 edition.

1996 - 2001 data

The calculations (of partner zones) below have been done for all the items supplied by UK (almost the complete level of detail as published in Eurostat's publication "Geographical breakdown of the current account"). In those cases where some items were missing for at least one component of the area, they were left blank in the country's tables and estimated for the calculation of the EU aggregate only. This was the case for items *investment income* (320), *income* (300) and *current account* (993), for 6 geographic partner zones (see table under caption "All GBR items: missing partners").

Extra-EU-15 (D4):

Eurostat computed this partner by subtracting partner EU-15 (D2) from World (A1).

Other European countries (E2):

Eurostat computed this partner by subtracting partners EFTA (A5) and intra-EU (D2) from Europe (E1).

North African countries (E5):

Eurostat computed this area by aggregating the data available for Egypt (EG), Morocco (MA) and the residual supplied for North Africa (R9 or E5 depending on the gesmes message).

Other African countries (E6):

Eurostat computed this area by subtracting partner North African countries (E5) from partner Africa (E4).

Central American countries (E9):

Eurostat computed this area by aggregating the data available for Mexico (MX) and the residual supplied for Central America (R3 or E9 depending on the gesmes message).

South American countries (F1):

Eurostat computed this area by aggregating the data available for Venezuela (VE), Argentina (AR), Brazil (BR), Chile (CL), Colombia (CO), Uruguay (UY) and the residual supplied for South America (R8 or F1 depending on the gesmes message).

Near and Middle East countries (F3):

Eurostat computed this area by aggregating the data available for Israel (IL), Iran (IR), Other Near and Middle east countries (F5), Saudi Arabia (SA) and the residual of "Gulf Arabian countries" (coded R5 or F4 depending on the gesmes message).

Other Asian countries (F6):

Eurostat computed this area by subtracting partner Near and Middle East countries (F3) from partner Asia (F2).

OECD countries (A8):

Eurostat computed this area by aggregating the OECD Member countries (as defined in the BOP Vademecum).

North American Free Trade Association (B1):

Eurostat computed this area by adding the data available for the three partner countries forming this area (United States, Canada and Mexico).

Core Newly Industrializing Countries (B9):

Eurostat computed this area by adding the data available for the four partner countries forming this area (Hong Kong, South Korea, Singapore and Taiwan).

Asian NICs of the second wave of industrialisation (C1):

Eurostat computed this area by adding the data available for the three partner countries forming this area (Malaysia, Philippines and Thailand).

Latin American NICs of the second wave of industrialisation (C2):

Eurostat computed this area by adding the data available for the four partner countries forming this area (Argentina, Brazil, Chile and Mexico).

n 250 - Construction abroad;

n 251 - Construction in the compiling economy:

These items are the sub-items of *construction services* (249). Eurostat estimated them by applying the average structure of *construction services* as given by 7 other Member States for partner World.

$$X_{n / partner}^{GB} = 249_{n / partner}^{GB} \times \underset{a \in MS}{average} \left[\frac{X_{n / A1}^a}{249_{n / A1}^a} \right]$$

where MS = {DE, ES, IT, NL, AT, PT}

partner ∈ {A1, D2, D4, CA, US, JP}

X ∈ {250, 251}

n ∈ {1998, 1999, 2000, 2001}

270 - Merchanting:

Merchanting was recorded on a gross basis. This item has been recalculated in net terms, because it is considered that the value of this service is the profit or loss on the transaction, i.e., the difference between the purchase price and the resale price. The final purchaser is taken to be the only party paying for the service. This amount has been allocated to the credit side. On the other side, all debits have been set to zero.

$$270_{n / partner}^{net \ GB / credit} = 270_{n / partner}^{gross \ GB / credit} - 270_{n / partner}^{gross \ GB / debit}$$

$$270_{n / partner}^{net \ GB / debit} = 0$$

where partner ∈ {A1, D2, D4, CA, US, JP}

n ∈ {1996, 1997, 1998, 1999, 2000, 2001}

271 - Other trade-related services:

This item was recalculated as the difference between *merchanting and other trade-related services* (269) and *merchanting* (270) in order to take into account the variation in item *merchanting*.

n All GBR items: missing partners

Below is a "correspondence table" between partners as defined in the BOP Vademecum and the data provided by the United Kingdom. Eurostat estimated all GBR items for the missing partners on the basis of the equation below (see table for the definition of A and B).

For some partners, only the item *investment income* (320) was missing to re-compile a geographic area. This item was then estimated by using the same procedure (applying the average breakdown of the *current account*), and *income* (300) and *current account* (993) were compiled accordingly.

Note: in the last gesmes files submitted, some partners were supplied with a different code. In the table below, S1 refers to the code used in the sending of 26/07/2002 and S2 to that of 21/08/2002.

$$X_{n/A}^{UK} = X_{n/B}^{UK} \times \underset{a \in MS}{\text{average}} \left[\frac{993_{01/A}^a}{993_{01/B}^a} \right]$$

where MS = {A3, DE, ES, FR, IT, NL, AT, PT}

A = partner area to estimate, in principle missing components in the partner to estimate

B = partner area used as reference, in principle total missing components of the area which is one level of aggregation above

X ∈ {all GBR items}

Norway

National data provider:

Statistics Norway, Division of National Accounts

Methodology applied at national level:

BPM5 and the 1993 System of National Accounts

Data collection system:

The system: Primarily a transaction-based system, complemented by the payments based International Transactions Reporting System of the Norges Bank

Main sources: External-trade statistics
Oil and gas statistics
Ocean transport statistics

National publication:

Weekly and Monthly Statistical Bulletins

Member State contact:

Mr Tore Halvorsen, Karin Snesrud

New data provided to Eurostat: 1995-1998, 2001

Revised data provided to Eurostat: 1999, 2000

1995 - 2001 data:

Minor corrections / calculations

Incorrect sign for debit flows

Eurostat changed the sign (from minus to plus) of some reported debit flows:

- debits with partner America (E7) for all the items provided (data sent last year;
- and debits with partner world for the items *compensation of employees* (310), *investment income* (320), *direct investment* (330), *dividend and distributed branch profit* (332), *reinvested earnings and undistributed branch profits* (333), *portfolio investment income* (339), *other investment* (370), *general government current transfers* (380), *other (private) current transfers* (390), and the *capital account* (994).

Non-reported aggregates

Eurostat recalculated some non-reported aggregates as the sum of their components:

- *other transportation* (214) as the sum of *space transport* (218), *rail transport* (219), *road transport* (223), *inland waterways transport* (227), *pipeline transport* (231) and *other supporting and auxiliary transport services* (232), for all partners but the world,
- *transportation* (205) as the sum of *sea transport* (206), *air transport* (210) and *other transportation* (214), for all partners but the world,
- *services* (200), as the sum of *transportation* (205), *travel* (236), *communications services* (245), *construction services* (249), *insurance services* (253), *financial services* (260), *computer and information services* (262), *royalties and licenses fees* (266), *other business services* (268), *personal, cultural and recreational services* (287) and *government services, n.i.e.* (291) for all partners but the world,
- *current account* (993) as the sum of *goods* (100), *services* (200), *income* (300) and *current transfers* (379), for all partners.
- the net *financial account* (995) with partner world was taken from the IMF's balance of payments database.

As regards aggregates relating to the geographical breakdown, the following partner areas were compiled as the sum of their Member States:

- the European Union as the sum of Belgium, Luxembourg, Denmark, Germany, Greece, Spain, France, Ireland, Italy, the Netherlands, Austria, Portugal, Finland, Sweden and the United Kingdom;
- the euro-zone as the sum of Belgium, Luxembourg, Germany, Greece (from 2001 onwards), Spain, France, Ireland, Italy, the Netherlands, Austria, Portugal and Finland;
- the EFTA as the sum of Switzerland, Iceland and Liechtenstein.

Coding errors for 1999 and 2000

As was indicated by Norway, the area "Oceania and polar regions" (code F7) was recalculated as Australia (AU) + New Zealand (NZ) + the reported code E7, corresponding to "Oceania and other territories (excl. Australia and New Zealand)".

The area "America" (Eurostat's code E7) was then calculated as Canada (CA) + USA (US) + Central American countries (E9) + South American countries (F1).

Computer and information services

Information services (264) "are most likely included in 263 *computer services*." We therefore hid the latter data to show only the aggregate *computer and information services* (262) in our publications.

Geographical breakdown:

In 1999 and 2000, world data (A1) underwent downward revisions. For some items, this caused the aggregated geographical breakdown (EU (D2) + EFTA (A5) + Other Europe (E2) + Africa (E4) + America (E7) + Asia (F2) + Oceania and Polar regions (F7)) to become much bigger than the reported total world figure (negative world not allocated geographically (code Z5)). The items concerned were *goods* (100), *income* (300), *sea transport* (206).

In these cases, Eurostat corrected the geographical breakdown by distributing the negative "world not allocated geographically" (Z5) among each partner, according to its weight in the aggregate geographical breakdown.

$$X_{n/partner}^{corrected\ NO} = X_{n/partner}^{original\ NO} + X_{n/Z5}^{original\ NO} \times \frac{X_{n/partner}^{original\ NO}}{\sum_{partner \in M} X_{n/partner}^{original\ NO}}$$

where partner \in {all partners but the world}

M = {D2, A5, E2, E4, E7, F2, F7}

X \in {credit 300, credit 206, credit 100, debit 100} for n \in {1999}

X \in {credit 300, credit 206, debit 206, credit 100, debit 100} for n \in {2000}

Oceania and Polar region (F7)

This partner is missing for 2001 while it was available for 1999 and 2000 in last year data sending.

Eurostat plan to estimate this partner by applying the share for previous years of Oceania and polar regions (F7) in the world (A1) to 2001 figures.

$$X_{01/F7}^{NO} = X_{01/A1}^{NO} \times \text{average} \left[\frac{X_{n/F7}^{NO}}{X_{n/A1}^{NO}} \right]$$

where n \in {1999, 2000}

X \in {all GBR items}

United States of America

Publications used: US Department of Commerce - Economics and Statistics Administration, Bureau of Economic Analysis "Survey of Current Business", October 2002
International Monetary Fund "Balance of Payments Yearbook"

New data used by Eurostat:	2001
Revised data used by Eurostat:	1999 - 2000

The data concerning the years 1990 to 1998 correspond to the figures published in the Eurostat publications "International Trade in Services: EU, 1991-00", and "Geographical Breakdown of the Current Account: EU, 1997-00". The estimation procedures carried out for these years can be found in the "International Trade in Services, Compilation Guide", December 2001 edition.

Note: For some partners, marked with a "*" in the list below, only the breakdown of "private services" (broadly "services - government services") was available, meaning that *goods*, *income*, *current transfers* and the *current account* are not presented.

The partners of the USA shown in Eurostat's publications are:

- ü World (A1),
- ü Intra-EU (D2),
- ü Extra-EU (D4, calculated as World - Intra-EU)
- ü Switzerland* (CH),
- ü Norway* (NO),
- ü Africa* (E4),
- ü South Africa (ZA),
- ü America (E7, calculated as Canada + "Latin America and other Western Hemisphere"),
- ü Canada (CA),
- ü Mexico (MX),
- ü Argentina* (AR),
- ü Brazil* (BR),
- ü Chile* (CL),
- ü Venezuela* (VE),
- ü Israel* (IL),
- ü Hong Kong* (HK),
- ü Indonesia* (ID),
- ü Republic of Korea* (KR),
- ü Malaysia* (MY),
- ü Philippines* (PH),
- ü Singapore* (SG),
- ü Taiwan* (TW),
- ü Thailand* (TH),
- ü China* (CN),
- ü India* (IN),
- ü Japan (JP),
- ü Australia (AU),
- ü New Zealand* (NZ),
- ü International organisations (7Z "International organisations and unallocated"),
- ü NAFTA (B1 calculated as Canada+Mexico),
- ü NICs1* (B9 calculated as Hong-Kong + Republic of Korea + Singapore + Taiwan),
- ü NICs2A* (C1 calculated as Malaysia + Philippines + Thailand),
- ü and NICs2LA* (C2 calculated as Argentina + Brazil + Chile + Mexico).

1999 to 2001 data

Sub-items of *Other business, professional and technical services*:

These items were provided for partner World only. Eurostat estimated their geographical breakdown in order to produce or correct other items, namely:

- ü *Travel* (236) includes "Medical services" and "Training services".
- ü *Operational leasing* (272) (only partners World, intra-EU, Canada and Japan).
- ü *Legal accounting, management consulting and public relations services* (274) includes "Accounting, auditing and bookkeeping" and "Management of health care facilities" (only partners World, intra-EU, Canada and Japan).
- ü *Audio-visual and related services* (288) includes "Miscellaneous disbursements".
- ü *Other personal, cultural and recreational services* (289) is "Sports and performing arts".

The geographical breakdown of these sub-items (in the US classification) was estimated by using the average share of each partner in the World as given for "Other business, professional and technical services" (referred to as 284 in the formula below)

$$X_{n/partner}^{US} = X_{n/A1}^{US} \times \left(\frac{284_{n/partner}^{US}}{284_{n/A1}^{US}} \right)$$

where $X \in \{\text{US sub items of "Other business, professional and technical services"}\}$

partner $\in \{\text{D2, CH, NO, E4, ZA, E7, CA, MX, AR, BR, CL, VE, IL, HK, ID, KR, MY, PH, SG, TW, TH, CN, IN, JP, AU, NZ, 7Z, B1, B9, C1, C2}\}$

n $\in \{1999, 2000, 2001\}$

Sub-items of "Other private services, Affiliated" (included in the corresponding item *Services between affiliated enterprises, n.i.e. - 285*):

In the US classification, some items were provided with affiliated flows and for partner World only. Eurostat estimated their geographical breakdown in order to correct the corresponding unaffiliated items in conformance with the Eurostat BOP classification, namely:

- ü "Financial services, affiliated", corresponding to item *Financial services* (260)
- ü "Computer and Information services, affiliated", corresponding to item *Computer and Information services* (262)
- ü "Operational leasing, affiliated" corresponding to item *Operational leasing* (272 - only partners World, intra-EU, Canada and Japan)
- ü "Management and consulting services, affiliated" included to item *Legal accounting, management consulting and public relations services* (274 - only partners World, intra-EU, Canada and Japan)
- ü "Research, development and testing services, affiliated" corresponding to item *Research and development services* (279)

The geographical breakdown of these sub-items (in the US classification) was estimated by using the average share of each partner in the World as given for "Other private services, affiliated" (corresponding to item *services between affiliated enterprises, n.i.e.; - 285*):

$$X_{n/partner}^{US, \text{affiliated}} = X_{n/A1}^{US} \times \left(\frac{285_{n/partner}^{US}}{285_{n/A1}^{US}} \right)$$

where $X \in \{\text{US sub items of "Other private services, affiliated"}\}$

partner $\in \{\text{D2, CH, NO, E4, ZA, E7, CA, MX, AR, BR, CL, VE, IL, HK, ID, KR, MY, PH, SG, TW, TH, CN, IN, JP, AU, NZ, 7Z, B1, B9, C1, C2}\}$

n $\in \{1999, 2000, 2001\}$

Afterwards, the total (Affiliated+Unaffiliated) amounts were calculated by summing the affiliated items to the corresponding unaffiliated items in order to obtain the corrected Eurostat BOP items. The affiliated amounts were after subtracted to the original item *services between affiliated enterprises, n.i.e* (285).

100 - Goods:

"Repairs on goods" (item 160) was included in the US item "Installation, maintenance and repairs of equipment". This figure was taken from the IMF Yearbook for partner World, and Eurostat estimated its geographical breakdown in order to correct "Goods, adjusted, excluding military" and "Services". The geographical breakdown of "repairs on goods" was estimated by using the average share of each partner in the World as given for "Installation, maintenance and repairs of equipment" (referred to as 281 in the following equation). This estimation has been done for all partners (even when "Goods" was not available), at least to correct item 281.

$$160_{n/partner}^{US} = 160_{n/A1}^{US} \times \left(\frac{281_{n/partner}^{US}}{281_{n/A1}^{US}} \right)$$

where partner \in {D2, CH, NO, E4, ZA, E7, CA, MX, AR, BR, CL, VE, IL, HK, ID, KR, MY, PH, SG, TW, TH, CN, IN, JP, AU, NZ, 7Z, B1, B9, C1, C2}
n \in {1999, 2000, 2001}

207 - Passenger transport on sea;

211 - Passenger transport by air:

The breakdown of US item "Passenger fares" (referred to as 970 in the equation below) between *passenger transport on sea* (207) and *passenger transport by air* (211) was available only with partner World. Eurostat estimated these two items for other partners by using their share in "Passenger fares" as provided for partner World.

$$X_{n/partner}^{US} = 970_{n/partner}^{US} \times \left(\frac{X_{n/A1}^{US}}{970_{n/A1}^{US}} \right)$$

where X \in {207, 211}
partner \in {D2, CH, NO, E4, ZA, E7, CA, MX, AR, BR, CL, VE, IL, HK, ID, KR, MY, PH, SG, TW, TH, CN, IN, JP, AU, NZ, 7Z, B1, B9, C1, C2}
n \in {1999, 2000, 2001}

236 - Travel:

"Business travel" (item 237) was included in the US item "Other unaffiliated services of other private services". The figure for "business travel" was taken from the IMF Yearbook for partner World, and Eurostat estimated its geographical breakdown in order to correct "Travel". The geographical breakdown of "Business travel" was estimated by using the average share of each partner in the World as given for "Other unaffiliated services of other private services" (referred to as 982 in the following equation).

$$237_{n/partner}^{US} = 237_{n/A1}^{US} \times \left(\frac{982_{n/partner}^{US}}{982_{n/A1}^{US}} \right)$$

where partner \in {D2, CH, NO, E4, ZA, E7, CA, MX, AR, BR, CL, VE, IL, HK, ID, KR, MY, PH, SG, TW, TH, CN, IN, JP, AU, NZ, 7Z, B1, B9, C1, C2}
n \in {1999, 2000, 2001}

246 - Postal and courier services:

This item was included in the US item "US government miscellaneous services". The figure for *postal and courier services* was taken from the IMF Yearbook for partner World, and Eurostat estimated its geographical breakdown by using the average share of each partner in the World as given for "US government miscellaneous services" (referred to as 292 in the following equation).

$$246_{n/partner}^{US} = 246_{n/A1}^{US} \times \left(\frac{292_{n/partner}^{US}}{292_{n/A1}^{US}} \right)$$

where partner \in {D2, CH, NO, E4, ZA, E7, CA, MX, AR, BR, CL, VE, IL, HK, ID, KR, MY, PH, SG, TW, TH, CN, IN, JP, AU, NZ, 7Z, B1, B9, C1, C2}
 n \in {1999, 2000, 2001}

Addendum: "Film and tape rentals" (partially included in item *Services between affiliated enterprises, n.i.e. - 285*):

The US addendum "Film and tape rentals" was originally included partly in "Affiliated other private services" (corresponding to item *services between affiliated enterprises, n.i.e. - referred to as 285*) and partly in "Other of unaffiliated other private services" - referred to as 982 in the equation below). With the new provision of "Film and tape rentals, affiliated" (partner World), Eurostat estimated first the part of "Film and tape rentals, unaffiliated" (referred to as 956 unaffiliated) that was included in "Other of unaffiliated other private services" by using the share of 982 for each partner in the World (the formula below describe the procedure). Afterwards, item 285 was corrected accordingly for the amounts imputed to "Film and tape rentals, affiliated" in order to take into account the classification of "Film and tape rentals" in item *audiovisual and related services (288)*.

$$956_{n/partner}^{US} = \left\{ (956_{n/A1}^{US} - 956_{n/A1}^{US}) \times \left[\frac{982_{n/partner}^{US}}{982_{n/A1}^{US}} \right] \right\}$$

$$285_{n/partner}^{US} = 285_{n/partner}^{US} - (956_{n/partner}^{US} - 956_{n/partner}^{US})$$

where partner \in {A1, D2, CA, JP}

n \in {1999, 2000, 2001}

total = Affiliated+Unaffiliated

Japan

Source:

Bank of Japan "Balance of Payments Monthly" (April 2002)

Methodology applied at the national level:

BPM5

New data used by Eurostat:	2001
Revised data used by Eurostat:	None

The data concerning the years 1985 to 1991 correspond to historical data converted by Eurostat from *BPM4* to *BPM5*. The data concerning the years 1992 to 2000 correspond to the figures published in the Eurostat publications "International Trade in Services: EU, 1991-2000", and "Geographical Breakdown of the Current Account: EU, 1997-2000". The estimation procedures carried out for these years can be found in the "International Trade in Services, Compilation Guide", December 2001 edition.

2001 Data

995 - Financial account:

Japan calculates the financial account as excluding reserve assets (802). Eurostat has reclassified reserve assets under the financial account.

010 - Capital and current account:

This item refers to Japan's reported *current account* (993) and *capital account* (994) items.

Geographical breakdown issues:

The extra-EU-15 partner zone (D4) was calculated as the difference between the World figure (A1) and the intra-EU-15 figure (D2).

Partner zones America (E7), NAFTA (B1), Asia (F2), NICS1 (B9) and NICS2A (C1) were calculated as the sum of the countries making up these zones.
