Identification

Resource Title: High-density clusters, 2006, final version - Population distribution - Dataset

Resource Abstract: This dataset contains high-density urban clusters, based on local population data of 2006, produced by the Eurostat-GEOSTAT grid. High-density clusters are defined as groups of contiguous raster cells of 1 sqkm size, having a population density of at least 1500 inhabitants/sqkm and a total population of at least 50000. The definition of high-density clusters underpins the degree of urbanisation classification of local administrative (LAU2) units and the definition of the Urban Audit cities. Data area available for EU countries (excluding Cyprus and the outermost regions of France), Norway, Switzerland, Liechtenstein and Iceland.

Resource Type: Dataset

Quality and Validity

Lineage The data are derived from population grid data produced by the Eurostat GEOSTAT project, combined with data on the share of land area per grid cell (JRC).
