

Item non-response rate – variables used to calculate disseminated indicators on IPV*

The following tables provide information regarding the item non-response rate related to the variables used to calculate disseminated indicators concerning intimate partner violence. This includes variables on occurrence, frequency, reporting and consequences of intimate partner violence, intimate partner violence by personal characteristics (limitations in everyday activities, level of education and country of birth) and commonness of intimate partner violence. Variable on degree of urbanisation is not included as it is classified according to usual residence of respondent and never not known.

* SK: Apart of screening questions of violence, majority of other questions were not asked if applicable and therefore value 9 (not known) is used in the dataset.

*PL: In the non-partner section occurrence of the episode and question whether the violence was repeated were not asked for most applicable respondents. Therefore, the routing for the rest of non-partner violence section was not implemented correctly.

*FR: There was an error in the routing of repetition of the non-partner violence and accordingly value 9 (not known) is used.

*Information for Italy is not provided as aggregated data are provided based on national violence against women survey.

Item non-response rate – variables used to calculate disseminated indicators on DV*

The following tables provide information regarding the item non-response rate related to the variables used to calculate disseminated indicators concerning domestic violence. This includes variables on type of domestic violence, occurrence of domestic violence and domestic violence by personal characteristics (limitations in everyday activities, level of education and country of birth). Variable on degree of urbanisation is not included as it is classified according to usual residence of respondent and never not known.

* SK: Apart of screening questions of violence, majority of other questions were not asked if applicable and therefore value 9 (not known) is used in the dataset.

*Information for Italy is not provided as aggregated data are provided based on national violence against women survey.

Item non-response rate – variables used to calculate disseminated indicators on sexual harassment at work*

The following tables provide information regarding the item non-response rate related to the variables used to calculate disseminated indicators concerning sexual harassment at work. This includes variables on occurrence, frequency, reporting of sexual harassment at work, sexual harassment at work by perpetrator and its commonness. Variable on degree of urbanisation is not included as it is classified according to usual residence of respondent and never not known.

COUNTRY	Reporting of SHW			Occurrence	Frequency	Perpetrator	Commonness of SHW	
	Official	Non-official	Any				Victim	No victim

Item non-response rate – variables used to calculate disseminated indicators on stalking*

The following tables provide information regarding the item non-response rate related to the variables used to calculate disseminated indicators concerning stalking. This includes variables on occurrence, reporting and consequences of stalking and stalking by perpetrator. Variable on degree of urbanisation is not included as it is classified according to usual residence of respondent and never not known.

COUNTRY	Reporting of ST			Occurrence	Perpetrator	Consequences of ST		
	Police	Support or legal service	Support, legal or police			Changed social contacts	Implemented measures	Changed work/study
BE	1.5%	1.1%	0.8%	2.9%	1.4%	1.5%	1.4%	1.4%
BG	4.9%	10.8%	3.1%	14.6%	6.4%	8.8%	7.1%	5.5%

*PT: There were several variables scoring a considerable high number of "refusal"/"don't know" answers.

*Information for Italy is not provided as aggregated data are provided based on national violence against women survey.

Item non-response rate – variables used to calculate disseminated indicators on violence during childhood*

The following tables provide information regarding the item non-response rate related to the variables used to calculate disseminated indicators concerning violence during childhood. This includes variables on experienced violence by age group, perpetrator and reporting of the violence. Variable on degree of urbanisation is not included as it is classified according to usual residence of respondent and never not known.

COUNTRY	Violence during childhood by age group					Perpetrator	Reporting of CH		
	18-29	30-44	45-64	65-74	18-74		Official body	Unofficial body	Any person or service
