## Working Group meeting "Statistics on Living Conditions / HBS"

#### 8-10 June 2016

#### **Eurostat-Luxembourg**

#### **BECH Building, Room Quetelet**

# the Household Budget Survey (HBS) for the Reference Year 2015

Version: 3

#### **Version History**

Version 1 2014-05-22 HBS2015\_Transmission\_DOC\_V1\_2014-05-22 Version 2 2015-05-08 HD20 is now calculated where ME01 = 1,2 or 3

Version 3 2016-05-17 Put description of Tabular data Transmission in a separate document. Plus, some additional cosmetic changes Table 5.1 Socio-Economic Status of the Reference Person made consistent with HC24. Added a new meta-data table 5.11 to keep track of non-official Classifications used. Change of calculation dependent children (HB07.4). For the variable HD20 (Number of members economically active) only count members where ME01 is 1 or 2.

	5.12.4. Annex 4	

This document, once approved by the income and living condition working group, will become the reference document for the transmission of HBS data for the wave 2015.

#### 1. Introduction

Consumption is the focus of the Household Budget Survey (HBS) and the majority of the variables that the countries collect are at household level. However, the advantage that the HBS has over other sources of consumption is, that by being a survey at household level, it can get information about the characteristics of the household and its members. The collection of these additional characteristics at EU level allows further consumption analysis according to these characteristics.

Micro-data versus Aggregated/Tabular data

Countries are encouraged to send micro-data instead of the aggregated tables ( Tabular Data ). This reflects the high demand for information on consumption expenditure from Policy Makers and researchers. In view of the fact that this survey is so rich in information, one cannot foresee all the potential tables which can be deduced. Moreover, to ask for all the possible tables to be sent to EUROSTAT would be impractical. Even though this has been clearly explained, there is only one EU country that still finds it difficult to send the micro-data files.

Structure of the document

This document will keep the same layout as its predecessor(s) and is split into three parts:

- Chapters 1, 2 and 3 describe the format and content of the micro-data files to be transmitted to Eurostat.
- Chapter 4 describes the aggregated tables (Tabular Data) to be transmitted to Eurostat. It does not apply if micro-data files are transmitted. Some comments included in Chapter 2, may also be useful for the correct interpretation of the contents of the aggregated tables (Tabular Data).
- Chapters 5 and 6 are common.

Finally, the importance of publishing <u>information about the data</u> (i.e. **Meta-data**), together with the data, has been emphasised. Therefore, <u>a list of additional information to be transmitted, together with the data appears in chapter 6</u>. In this way a final EU aggregate quality report reflecting the six dimensions representing quality, namely:

- Relevance
- Accuracy
- Timeliness and punctuality
- Accessibility and Clarity
- Comparability
- Coherence

could be published, as close as possible to the publication of data.

#### Variance estimation

During a previous Working Group some concerns were raised about Table 5: Estimated standard errors, confidence intervals and design effects which should be sent together with the micro-data files. It is worth remembering that for the Quality Report for the previous HBS wave, Variance and Confidence Limits were computed without all the information that is needed to build an accurate model, thus reducing the accuracy of the estimates (see the Quality Report for the 2005 wave, Appendix 2 for the formulae). It is proposed again to improve the situation for the 2015 wave.

The methodology Unit in Eurostat has given some advice in the past regarding the calculation of these estimates. Three main approaches were outlined, which make possible the computation and dissemination of standard errors for National and European estimates. These include the

- 1) The decentralized approach.
- 2) An integrated approach
- 3) And a *fully centralised approach*,

After an internal discussion it was decided that the third option is feasible for the HBS. For this, Member-States are being asked to provide

- the stratum to which the ultimate sampling unit belongs
- the cluster to which the ultimate sampling unit belongs
- the final sampling weight of the units used in the estimation, adjusted for non-response and calibration

EUROSTAT will be using the SAS Surveymeans and Surveyfreq procedures to produce these estimations and Member-States will be asked to validate them.

#### 2. PROPOSED LIST OF VARIABLES FOR MICRO-DATA FILES

The following lists contain the variables proposed by Eurostat for the micro-data files of the HBS round 2015. These lists have been proposed after an analysis of the variables actually used to satisfy the information needs of the users of the HBS information at a European level during the last few years, the expected uses during the next years and to align this survey with the List of Social Statistics Core Variables (CV) as agreed between the Directors of Social Statistics. In this edition the distinction between "household" and "members" files is retained by having two separate groups of files with a common Household Reference Number Variable in all, for relationship-building purposes. Another additional file type exists, namely the one containing the 'Derived' variables.

Eurostat proposes that only the derived variables, which will be used to produce tables for Eurostat's website, will be calculated by each country. The others will be calculated accordingly on an ad hoc basis.

The definitions and explanations about the possible values are kept in this release too.

All the variable tables below, will have the following structure:

Variable	Variable	Possible Values and/or Comments	Format
Name	Label		

HA02

#### 2.1. Basic variables at the household level

Survey year(s)

These variables give information about single households and come taken from the information collected in the surveys.

CHA 4

#### 2.1.1. [HA] Identification, weighting, demographic characteristics

urvey year(s)			CIIA 4
gits of the survey	year ha	we to be specified. A range of years are to be	indicated if
	•		
dentification nur	nber		CHA 13
f the household			
	•		
4404220	1 -	1	INT 13
tratum			IN 1 13
		-1 if not applicable	
rimary sampling	g unit	1 – n	INT 13
		-1 if not applicable	
	J	TT	
A08 Region			CHA 4
	7	The Format is 2-Character Country-Code	
	ı	followed by 2-digits.	
		XX00 For the countries with no sub-divisions	
		XX99 Not specified	
ex 5.		1	
ulation	1 Dense	ely nonulated (at least 500 inhabitants/km²)	CHA 1
		*

	3 Sparse	ely populated (less than 100 inhabitants/km <sup>2</sup> )	
			ı
mple weight			<b>DEC 8.2</b>
	dentification nur f the household tratum  degion  ex 5.	dentification number f the household tratum  rimary sampling unit  degion  ex 5.  ulation sity-level  1 Dense 2 Intern 3 Spars 9 Not spars 9 Not spars 1	tits of the survey year have to be specified. A range of years are to be over more than 1 calendar year: e.g. for 2014 – 2015 specify [1415]  dentification number f the household  tratum  1 - n -1 if not applicable  rimary sampling unit 1 - n -1 if not applicable  The Format is 2-Character Country-Code followed by 2-digits.  XX00 For the countries with no sub-divisions XX99 Not specified  1 Densely populated (at least 500 inhabitants/km²) 2 Intermediate (between 100 and 499 inhabitants/km²) 9 Not specified

The weighting of the sample **applied by Eurostat** is identical to that calculated by the Member States for the national publications of the survey results. **No scaling** should be done to the weights.

#### 2.1.1. [HC] Basic demographic characteristics of the reference person<sup>1</sup>

HC03	Sex of reference person	1 male	CHA 1
		2 female	
		9 not specified	
HC04	Age (in completed years) of	16	CHA 2
	reference person	$\downarrow$	
		98 (98 years or over)	
		99 not specified	
HC05	Marital status	1 Never married and never in a registered partnership	CHA 1
	of the reference	2 Married or in a registered partnership	
	person	3 Widowed or with registered partnership that ended	
		with death of partner(not remarried or in new	
		registered partnership)	
		4 Divorced or with registered partnership that was legally dissolved (not remarried or in new registered	
		partnership	
		9 Not Specified	

• For this variable, some confusion could exist between

the 'legal' (de jure) situation and

'actual' (de facto) situation. In this case, it is the 'de facto' situation which should be decisive.

HC05.1	Consensual union of the	1 Person living in consensual union	CHA 1
	reference person	2 Person not living in consensual union	
		9 Not specified	

Certain countries may have problems in collecting this information. In that case, the code '9' has to be used.

Page **7** of **59** 

Please note that "reference person" is a European concept, which usually differs from the national concept of "head of household". In a few words, the "reference person" is the adult (16+) contributing most to the total income of the household. In that sense, the reference person can also be designated as "main income earner".

#### 2.1.2. [HH] Income

The following remarks refer to the transfer of data on income:

In countries where it is not possible to obtain very detailed information, the minimum objective is to provide Eurostat with the net disposable income of the household (HH09.5 and HH09.9). Contrary to the previous HBS rounds, where very detailed information about income was requested, in this Wave only non-monetary components of income and total net disposable income have been included in the variable list.

When source of income does not concern any individual, but the household as a whole, it is allocated to the household's record. Consequently, the sum of the individual incomes does not necessarily equal to the household's income.

The amounts reported to Eurostat should be annualised (temporal weighting); the weighting of the sample is provided separately (HA10) and applied by Eurostat.

#### Primary income and income from housing

HH01.2	Income in kind from employment (wages and salaries in kind)	Benefits provided within the framework of paid employment (except imputed rent: HH03.2)	INT 14
HH02.3	Income in kind from non-salaried activities	Including withdrawals from own garden, farm or enterprise for the household's private consumption Excluding imputed rent (HH03.2)	INT 14
HH03.2*	Imputed rent	The owners' imputed rent and that of tenants living free of charge	INT 14

<sup>\*</sup> By convention, the various types of imputed rents, whether it is for an owner or a tenant living free of charge, are included in this variable.

#### Total income

HH09.5	Monetary net income (total monetary income from all sources minus income taxes)		INT 14
HH09.9	Net income (total income from all sources including non-monetary components minus income taxes)	HH09.9 = HH09.5 + HH01.2 + HH02.3 + HH03.2	INT 14

#### 2.1.3. [HI] Main source of the household's income

HI11	Main source of income	1 wages or salary	CHA 1
		2 income from self-employment	
		3 property income	
		4 pensions, retirement benefits	
		5 unemployment benefit	
		6 other current benefits and other income	
		9 not specified	

HI12	Main source of income	1 primary (HI11 = 1, 2, 3)	CHA 1
	(primary / secondary)	2 secondary (HI11 = $4, 5, 6$ )	
		9 Not Specified (HI11 = 9)	

#### 2.1.4. [HE] Household's consumption expenditure

Household's consumption expenditure will be supplied broken down by the COICOP 5-Digit classification in effect since 06/12/2013. (4 levels with up to 5-digit codes).

The List of HE variables are in Annex 1.

Note that dots ('.') have been replaced by underscores ( '\_ '), in these variable names as SAS cannot handle Variable-names containing dots.

Note: All identifiers have the same numeric Format of: INT 14

Please note that the COICOP categories "12.5.1 Life insurance" and "12.6.1 FISIM: Financial intermediation services indirectly measured" are not measurable by the HBS. For this reason, the corresponding variables have been removed from this list.

In order to be able to give a more complete overview of the structure of consumption, in particular in the food sector and the area of benefits-in-kind, consumption expenditure is to be classified into two categories. Each of them indicated by a different suffix which is added to the original HExx identifier:

"A" = expenditure effected in monetary form

"B" = expenditure effected in non-monetary form

So, for example: HE00 = HE00A + HE00B

\*\*\*

It is important in the micro-data files to make clear the distinction between the expenditure items the households declined to report and those for which zero expenditure was reported, during the reference period.

#### Eurostat recommends that

- a '0' is to be used for any expenditure categories for which the Household reported *zero* expenditure during the reference period, and
- a '.' (a dot) for categories that the Household declined to provide any value for (i.e. the value is missing).

#### 2.1.5. [HJ] Cross border consumption expenditure

These variables concern the part of the household's consumption expenditure effected abroad.

Note: All identifiers have the same Format of: INT 14

НЈ00	Total consumption expenditure effected abroad	HJ01+HJ02+HJ03+HJ04+HJ05+HJ06+ HJ07+HJ08+HJ09+HJ10+HJ11+HJ12
HJ01	Food and non-alcoholic beverages	
HJ02	Alcoholic beverages, tobacco and narcotics	
HJ03	Clothing and footwear	
HJ04	Housing, water, electricity, gas and other fuels	
HJ05	Furnishings, household equipment and routine household maintenance	
HJ06	Health	
HJ07	Transport	
HJ08	Communication	
HJ09	Recreation and culture	
HJ10	Education	
HJ11	Restaurants and hotels	
HJ12	Miscellaneous goods and services	
HJ90	Consumption expenditure on travelling and holidays abroad	

Unlike for the variables HExx, we propose to register only the expenditure made in monetary form. Moreover, the proposed level of detail is only by COICOP **division** (i.e. 2-digit). For those countries with small proportions of cross-border consumption expenditure at an aggregated level, collecting only the variables HJ00 and HJ90 is acceptable.

#### 2.1.6. [HQ] Household's consumption in Quantities

Household's consumption in Quantities will be based on the COICOP 5-Digit classification in effect since 2013. The prefix of 'HE' in the variable names will be replaced by 'HQ'.

The List of HQ variables are in Annex 2.

Note that dots ('.') have been replaced by underscores ( '\_ '), in these variable names as SAS cannot handle Variable-names containing dots.

Note: All identifiers have the same numeric Format of: DEC 16.1

Note: The Measurement Unit to be used are:

SolidsLiquids/non-SolidsEggsUnit

#### File format and name

File format: SAS or TSV (Tab-Separated Values) file format may be used

File names: "hh\_food.sas7bdat" or "hh\_food\_tsv.txt"

Format of file contents:

The columns should contain the variables (one variable per column) and one row should refer to one household

In case of TSV format, the first row of the file will contain the names of the variables.

Since SAS does not allow dots within identifiers, dots/underscores will be removed from the variable names proposed in this list, when imported into the Eurostat HBS IT System (e.g. the variable HH09.9 will be identified as HH099 in SAS).

#### **Documentation**

Eurostat would like to receive in a separate Meta-Data documentation file, the following information:

- the list of COICOP 5-DIGIT headings where the food products used in the national survey deviates from the list of recommended food products listed in Annex 2, including the differences between the recommended list of products.
- Measurement units (kg, litre, unit) used to record the quantities of food products and beverages.

#### 2.2. Derived variables at household level

These variables are calculated from the basic variables or from other derived variables, either at household or individual member level.

#### 2.2.1. [HB] Household size and equivalent size

HB05	Household size	01-xx	INT 2
------	----------------	-------	-------

Calculation rule: HB05 = Sum of household members.

HB05.1	Number of persons aged less than or equal to 4	01-xx	INT 2
HB05.2	Number of persons aged from 5 to 13	01-xx	INT 2
HB05.3	Number of persons aged from 14 to 15	01-xx	INT 2
HB05.4	Total number of persons aged from 16 to 24	01-xx	INT 2
HB05.5 Number of persons aged from 16 to 24 who are students		01-xx	INT 2
HB05.6	Number of persons aged from 25 to 64	01-xx	INT 2
HB05.7	Number of persons aged more than or equal to 65	01-xx	INT 2

HB06.1	Equivalent size (OECD scale)	01-xx,x	<b>DEC 5.1</b>

This variable is established by allocating weighting coefficients to the household's members according to their demographic characteristics. Given the existence of big differences in the sizes and structures of households, comparability can be improved by using expenditure or income by adult equivalent.

The OECD scale consists of allocating the following weightings to persons in the calculation of the "equivalent household's size".

- •first adult in the household = 1.0
- •each adult thereafter (aged over 13) = 0.7
- •each child (13 or under) = 0.5

Calculation rule: HB06.1 = 0.3 + (0.7\*A) + (0.5\*B)

- A = Sum of household members where MB03 > 13
- B = Sum of household members where MB03 < 14

(Please note that the first adult of the household counts as 1 because of the addition of the constant term 0.3, assuming that each household must have at least one adult).

,	······································				
HB06.2	Equivalent size (modified OECD scale)	01-xx,x	<b>DEC 5.1</b>		

The modified scale was developed on the basis of the argument that the original scale of the OECD gave relatively too much weight to additional persons.

- •first adult in the household = 1.0
- •each adult thereafter (aged over 13) = 0.5
- •each child (13 or under) = 0.3

Calculation rule: HB062 = 0.5 + (0.5\*A) + (0.3\*B)

- A = Sum of household members where MB03 > 13
- B = Sum of household members where MB03 < 14

(Please note that the first adult of the household counts as 1 because of the addition of the constant term 0.5, assuming that each household must have at least one adult).

#### 2.2.2. Type of household

HB07.4	Type of Household 1 –	1 one adult	CHA 1
	( Age limit for children set at 16	2 two adults	
	years of age )	3 more than 2 adults	
		4 one adult with dependent children	
		5 two adults with dependent	
		children	
		6 more than 2 adults with dependent	
		children	
		9 other	

#### Calculation rule:

If (MB03 < 16) or [(15 < MB03 < 25)] and (MB05 = 3) and (ME01 <> 1] and 2)]  $\rightarrow$  **DEPCHILD** + 1

Else  $\rightarrow$  ADULT + 1 (To be repeated for all household members)

If (ADULT = 1) and (**DEPCHILD** = 0)  $\rightarrow$  HB07.4 = 1

If (ADULT = 2) and (**DEPCHILD** = 0)  $\rightarrow$  HB07.4 = 2

If (ADULT > 2) and (**DEPCHILD** = 0)  $\rightarrow$  HB07.4 = 3

If (ADULT = 1) and (**DEPCHILD** > 0)  $\rightarrow$  HB07.4 = 4

If (ADULT = 2) and (**DEPCHILD** $> 0) \rightarrow HB07.4 = 5$ If (ADULT > 2) and (**DEPCHILD** $> 0) \rightarrow HB07.4 = 6$ 

Else  $\rightarrow$  HB07.4 = 9

HB07.5	Type of household – 2	10 One person household	CHA 2
11207.2	Type of nousenote 2	21 Lone parent with child(ren) aged	
	Another classification to reflect	less than 25	
	the Core Variables in EU social		
		22 Couple without child(ren) aged less than 25	
	surveys		
		23 Couple with child(ren) aged less	
		than 25	
		24 Couple or lone parent with	
		child(ren) aged less than 25 and	
		other persons living in the	
		household	
		99 other type of household	
•	•	•	
HB07.6.1	Number of persons aged 16-64	0-XX	INT 2
	in the household who are		
	working.		
HB07.6.2	Number of persons aged 16-64	0-XX	INT 2
	in the household who are		
	unemployed or who are		
	economically inactive		

#### 2.2.3. [HC] [HD] Activity and economic situation

The variables on activity and economic situation of the household also have a special importance insofar as they make it possible to categorise the households according to characteristics leading to different behaviour as regards consumption expenditure.

HC23	Socio-economic situation of	⇒Private sector	CHA 2
	the reference person	Z1 manual worker except agriculture	
		Z2 non-manual worker except agriculture	
		⇒Public sector	
		Z3 manual worker except agriculture	
		Z4 non-manual worker except agriculture	
		$\Rightarrow$ Other	
		Z5 self-employed person except	
		agriculture	
		Z6 farmer or agricultural worker	
		Z7 unemployed	
		Z8 retired	
		Z9 student or in national service	
		10 housewife or person engaged in a	
		non-economic activity	
		11 unable to work	
		88 not applicable (legal age to work	
		unattained)	
		99 not specified	
		{Note: The 'Z' represents a leading Zero}	

#### Calculation rule:

**Define the auxiliary variables: AGRICULTURE and ACTIVITY** Creating the following "*Pseudo-variables*": HC12\_P, <u>HC16\_P</u> & HC17\_P.

NB: Calculate, only for Reference Person in each Household!

```
IF MB05 = '1' # i.e. it is the Reference person

Then do

HC12_P = ME01 # Current activity status of Ref Person

HC21_P = ME12 # Status in Employment

HC22_P = ME13 # Sector of household member

AGRICULTURE=(ISCO-08_Code=61,62,63) OR (ISCO-08_Code=92)

# The variables HC16 & HC17 don't exist, so one uses, indirectly ME01:

ACTIVITY = HC12_P
```

#### # Changed these to correspond to ME01 Code Values:

```
If (ACTIVITY=2) \rightarrow HC23 = Z7
                                               { Unemployed }
If (ACTIVITY=3) \rightarrow HC23 = Z8
                                               { Retired }
If (ACTIVITY=4) \rightarrow HC23 = \mathbb{Z}9
                                               { Student }
If (ACTIVITY=5) \rightarrow HC23 = 10
                                               { Fulfilling domestic tasks }
If (ACTIVITY=6) → HC23 = 11
                                               { Disabled }
If (ACTIVITY=7) \rightarrow HC23 = Z9
                                               { Compulsory National Service }
If (ACTIVITY=8) \rightarrow HC23 = 88
                                               { Not applicable }
If (ACTIVITY=9) → HC23 = 99
                                               { Not specified }
```

```
# for the Reference Person:
If (ACTIVITY=1,2) \rightarrow
[ If (AGRICULTURE) \rightarrow HC23=Z6
                                                  {farmer or agriculture worker}
 Else
  [ If (HC21_P=1,2) \rightarrow HC23=Z5
                                                         {employer or self-employed person}
     If (HC21 P=3,4,5) →
                                                         {employed person, either paid or not}
     HC18 = ME0908 Do:
        [ If (HC22 P=1) →
                                        {public sector}
              If (HC18=01-44)
                                         \rightarrow HC23 = Z2 { non manual worker except agric.}
              If (HC18=51-54, 71-96) \rightarrow HC23 = Z1 { manual worker except agriculture}
                                          \rightarrow HC23 = 88 { not applicable}

5 or more

The above variable is calculated by counting the number of persons employed in the household (number of ME01 = 1 or 2). $^{2}$ 

 $<sup>^2</sup>$  Please refer to the definition of the variable ME01 for the grouping of codes into 'Economically Active' and 'Economically Inactive'. Page **17** of **59** 

#### 2.3. Basic variables at member level

The following variables give information about single household members.

#### 2.3.1. [MA] Identification, weighting, demographic characteristics

MA04	Identification number of the household		CHA 13
MA05	Line number of the member of household	Z1, Z2, Z3,Z4,Z5,Z6,Z7,Z8,Z9> 15 99 Not specified	CHA 2
		{ Note: The 'Z' represents a leading Zero }	

Each member of the household is identified by a line number starting with the first member as '01'. The maximum has been set arbitrarily at 15, in order to take into account extreme situations, but it is more plausible that the sizes are much smaller.

#### 2.3.2. [MB] Basic demographic characteristics of household members

MB01	Country of Birth of household member	Country Code according to the ISO-3166-Alpha-2 classification	CHA 2
	Household member	3100-Aipha-2 classification	

If the above variable cannot be provided at the suggested level of detail, then Eurostat would like to have at least the following aggregations:

#### 10 National

- 21 Non-National but EU-National
- 22 Non-National and non-EU-National
- 99 Not Specified

MB01.1	Country of Citizenship of	Country Code according to the ISO-	CHA 2
	household member	3166-Alpha-2 classification	

If the above variable cannot be provided at the suggested level of detail, then Eurostat would like to have at least the following aggregations:

#### 10 National

- 21 Non-National but EU-National
- 22 Non-National and non-EU-National
- 99 Not Specified

MB01.2	Country of Residence of the	Country Code according to the ISO-	CHA 2
	household member	3166-Alpha-2 classification	

If the above variable cannot be provided at the suggested level of detail, then Eurostat would like to have at least the following aggregations:

#### 10 Reporting Country

- 21 Not the same as the Reporting Country but from another EU-country
- 22 Not the same as the Reporting Country and not from another EU-country
- 99 Not Specified

These variables have been added to reflect the agreement between the Directors of Social Statistics on Core Variables

member

MB02	Sex of household	1 male	CHA 1
	member(s)	2 female	
		9 not specified	
MB03	Age (in completed	Z0, Z1, Z2, Z3, Z4, Z5, Z6, Z7, Z8, Z9	CHA 2
	years) of household	=> 98 (98 years or over)	

99 not specified

MB04	Marital status of	1 Never married and never in a registered partnership	CHA 1
	household member	2 Married or in a registered partnership	
		3 Widowed or with registered partnership that ended with death	
		of partner (not remarried or in new registered partnership)	
		4 Divorced or with registered partnership that was legally	
		dissolved (not remarried or in new registered partnership	
		9 Not Specified	

{ Note: The 'Z' represents a leading Zero }

This variable has been updated to reflect the agreement between the Directors of Social Statistics on Core Variables

MB04.2	Consensual union of	1 Person living in consensual union	CHA 1
	household member	2 Person not living in consensual union	
		9 Not specified	

This variable has been updated to reflect the agreement between the Directors of Social Statistics on Core Variables. The table MB04.1 was dropped and a new table MB04.2 was introduced

De facto marital status is used for identifying persons living in consensual union. Two persons are taken to be partners in a consensual union when they have usual residence in the same household, are not married to each other, and have a marriage-like relationship to each other

MB05	Relationship	1 Reference person	CHA 1
		2 spouse or partner	
		3 child of <b>Reference person</b> and/or of the spouse	
		4 parent of <b>Reference person</b> and/or of the spouse	
		5 other relative	
		6 no family relationship (e.g.: resident employee)	
		9 not specified	

This variable is re-used in the construction of the type of household. It aims primarily at demonstrating immediate (nuclear) family relationships. In this case too, it is the 'de facto' situation which should be recorded. Thus an adopted child will be coded '3' rather than' 5'.

**Note**: The Eurostat Definition of the Reference Person is the following:

"The member that contributes most to the Household consumption budget."

If, at a National level a different definition is used, please provide us with a short explanation in the accompanying Meta-data.

#### 2.3.3. [MC] Education

MC01	Level of studies	0 Early childhood education	CHA 1
	completed by the	1 Primary education	
	household member	2 Lower secondary education	
	(ISCED 2011)	3 Upper secondary education	
		4 Post-secondary non tertiary education	
		5 Short cycle tertiary	
		6 Bachelor or equivalent	
		7 Master or equivalent	
		8 Doctorate or equivalent	
		9 Not Specified	

MC02	Level of studies currently	0 Early childhood education	CHA 1
	being followed by the	1 Primary education	
	household member	2 Lower secondary education	
	( ISCED 2011 )	3 Upper secondary education	
		4 Post-secondary non tertiary education	
		5 Short cycle tertiary	
		6 Bachelor or equivalent	
		7 Master or equivalent	
		8 Doctorate or equivalent	
		9 Not Specified	

#### 2.3.4. [ME] Activity

ME01	Current activity status of	⇒economically <i>active</i>	CHA 1
	household member	1 working including with employment but	
		temporarily absent	
		2 unemployed	
		⇒economically <i>inactive</i>	
		3 In <b>retirement</b> or early retirement or has	
		given up business	
		4 Pupil, student, further training, unpaid work	
		experience	
		5 Fulfilling domestic tasks	
		6 Permanently disabled	
		7 In compulsory military or community service	
		8 not applicable (legal age to work	
		unfulfilled)	
		9 not specified	

The "persons in employment" should be coded 1. Persons temporarily absent from work are regarded as being "working" if they retain a formal link with their employment.

The category **"unemployed"** (code 2) is difficult to measure. According to the definition adopted in the Labour Force Surveys, which complies with the ILO recommended definition, being unemployed covers all persons having passed a specified age who, during the reference period, were:

- •"without work", i.e. who had neither paid employment nor unpaid employment;
- •"available for work" in paid (or unpaid) employment;
- •"in search of work", i.e. who had made specific arrangements during a specified recent period to seek paid or unpaid employment.

All persons who are not classified as "working" or "unemployed" are considered inactive. The following categories of inactive can be distinguished:

- pensioners (retired) who have left their employment at the end of their active life;
- students, persons performing their national service, 'home-bound' persons engaged in various noneconomic activities:
- code 6 covers **persons unable to work** due to a physical or other disability

ME02	Hours worked	1 Full time	CHA 1
		2 Part time	
		8 Not applicable	
		9 not specified	

ME03	Type of work contract for	1 permanent job/work contract of	CHA 1
	the household member	unlimited duration	
		2 temporary job/work contract of limited	
		duration	
		8 not applicable (does not work)	
		9 not specified	

ME04	Economic	A	Agriculture, forestry and fishing	CHA 1
	sector in	В	Mining and quarrying	
	Employment	C	Manufacturing	
	of	D	Electricity, gas, steam and air conditioning supply	
	household	E	Water supply; sewerage, waste management and	
	member		remediation activities	
	(reflecting	F	Construction	
	NACE rev 2)	G	Wholesale and retail trade; repair of motor	
			vehicles and motorcycles	
		Н	Transportation and storage	
		I	Accommodation and food service activities	
		J	Information and communication	
		K	Financial and insurance activities	
		L	Real estate activities	
		M	Professional, scientific and technical activities	
		N	Administrative and support service activities	
		О	Public administration and defence; compulsory	
			social security	
		P	Education	
		Q	Human health and social work activities	
		R	Arts, entertainment and recreation	
		S	Other service activities	
		T	Activities of households as employers;	
			undifferentiated goods - and services - producing	
			activities of households for own use	
		U	Activities of extraterritorial organisations and	
		_	bodies	
		Z	Not specified	

ME09 <b>08</b>	Occupation	Z1	Commissioned armed forces officers	CHA 2
	of household	$\mathbb{Z}2$	Non-commissioned armed forces officers	
	member	$\mathbb{Z}3$	Armed forces occupations, other ranks	
	(ISCO08)	11	Chief executives, senior officials and legislators	
		12	Administrative and commercial managers	
		13	Production and specialized services managers	
		14	Hospitality, retail and other services managers	
		21	Science and engineering professionals	
		22	Health professionals	
		23	Teaching professionals	
		24	Business and administration professionals	
		25	Information and communications technology professionals	
		26	Legal, social and cultural professionals	
		31	Science and engineering associate professionals	
		32	Health associate professionals	
		33	Business and administration associate professionals	
		34	Legal, social, cultural and related associate professionals	
		35	Information and communications technicians	
		41	General and keyboard clerks	
		42	Customer services clerks	
		43	Numerical and material recording clerks	
		44	Other clerical support workers	
		51	Personal service workers	
		52	Sales workers	
		53	Personal care workers	
		54	Protective services workers	
		61	Market-oriented skilled agricultural workers	
		62	Market-oriented skilled forestry, fishery and hunting workers	
		63	Subsistence farmers, fishers, hunters and gatherers	
		71	Building and related trades workers, excluding electricians	
		72	Metal, machinery and related trades workers	
		73	Handicraft and printing workers	
		74	Electrical and electronic trades workers	
		75	Food processing, wood working, garment & other craft & related	
		0.1	trades workers	
		81	Stationary plant and machine operators	
		82	Assemblers	
		83	Drivers and mobile plant operators	
		91 92	Cleaners and helpers	
			Agricultural, forestry and fishery labourers	
		93 94	Labourers in mining, construction, manufacturing and transport	
		95	Food preparation assistants Street and related sales and service workers	
		96		
		98	Refuse workers and other elementary workers	
		98	Not Applicable	
			Not Specified	
		{ INO1	te: The 'Z' represents a leading Zero }	

ME12	Status in employment	1 employer	CHA 1
	household member	2 self-employed person	
		3 employee	
		4 unpaid family worker	
		5 apprentice	
		6 persons not classified by status	
		8 not applicable (legal age to work	
		unfulfilled)	
		9 not specified	

#### HBS2015transmissionDOC\_V3

ME13	Sector household member	1 public sector employee	CHA 1
		2 private sector employee	
		8 not applicable (legal age not fulfilled or	
		not an employee)	
		9 not specified	

Despite the difficulties encountered in earlier rounds of the surveys, the distinction between employees in the public sector and in the private sector has been preserved owing to the differences in consumption behaviour and in income level that membership of one or the other sector could have. This variable is used to construct the socio-economic situation of the individuals (ME14).

#### 2.3.5. [MF] Income

The following remarks refer to the transfer of data on income:

In countries where it is not possible to obtain very detailed information, the minimum objective is to provide Eurostat with the net disposable income of the household (HH09.9) by including its different components such as they are defined in chapter 6. However in the long term, it is desirable to provide the detail requested by Eurostat.

When source of income does not concern any individual, but the household as a whole, it is allocated to the household's record. This is why property income, income-in-kind (except those from paid employment) and housing benefits are not included in the individual's record. Consequently, the sum of the individual incomes does not necessarily equal to the household's income.

The amounts reported to Eurostat should be annualised (temporal weighting); the weighting of the sample is provided separately (HA10) and applied by Eurostat.

The incomes of the household (HH) as well as the principal source of income (HI) could be regarded as derived variables insofar as their calculation does not pose any particular problem if the detail of the individual incomes is indicated correctly.

Nevertheless, as this has not been the case in previous rounds of the surveys in all Member States, it is preferable to classify them as part of the basic variables.

#### Total income

Ī	MF09.9	Total income from all sources	This variable does not include any	INT 14
		(net amount) corresponding	household allowances	
		to each single member of the		
		family		

#### 2.4. Variables required for the determination of owner-occupiers imputed rent (IR)

The determination of owner-occupiers imputed rent has some difficulties for some countries, namely those countries with small rental markets. For this reason, although Eurostat has recommended following as much as possible the indications contained in the Commission Decision of 18 July 1995 (95/309/EC, Euratom), other possibilities could also be accepted if the main method proposed by this decision does not work. The above mentioned Decision states:

- (a) to compile the output of dwelling services Member States shall apply the stratification method based on actual rents;
- (b) Member States shall use tabular analyses or statistical techniques to derive significant stratification criteria;
- (c) the actual rent shall be understood as the rent due for the right to use an unfurnished dwelling;
- (d) to compile imputed rents, actual rents from all contracts shall be exploited relating to privately-owned dwellings;
- (e) in countries where the privately rented sector is small, the corresponding level of rent in the private sector may be obtained either using increased (public) rents or, in justified exceptional cases, employing other objective methods like the user-cost method;
- (f) rents for furnished dwellings may similarly be used to enlarge the basis for imputed rents if scaled down to exclude the payment for the use of the furniture;
- (g) Member States should extrapolate a given base year figure using appropriate quantity, price and quality indicators.

This Decision only allows using the stratification method based on actual rents. However it is very unlikely that this method could work satisfactorily on countries with very small rental markets (around less than 10% of the dwellings) and sample sizes economically acceptable. For this reason Eurostat has proposed to use in these cases more powerful methods, although generally more complex, in order to exploit in the best way, the available information. These methods are of econometric nature and are based on regression techniques for the estimation of hedonic prices of dwelling rentals. The best known of these methods is Heckman's. In extreme cases where none of these methods work satisfactorily, Eurostat is open to discuss on an individual basis, the application of other methods (e.g. self-assessment, cost-user...)

The problem we face now is that the information needs for a successful implementation of any these methods are highly dependent on the method chosen and the particular circumstances of each country. Therefore it is not easy to propose a single variable list valid for all the countries of the European Union. However, in order to simplify this task for the countries, Eurostat has analysed the experience of a few countries and has prepared two lists of input variables for the application of these methods. These lists could serve as the starting point for the countries in order to determine the variables they need depending on the chosen method and the particular circumstances of their rental markets.

It is important to highlight that Eurostat is mainly interested in collecting good data on the variables "HE04.1 Actual rentals for housing" and "HE04.2 Imputed rentals for housing". These variables discussed in this section are only listed as an indication, and their role and the importance depend on how they contribute to this target. Therefore we do not preclude using other variables, provided that they are useful for estimating dwelling rentals. Moreover, if there are any variables available at national level, not included in the Eurostat lists, that could be interesting for modelling dwelling rentals, we recommend using them (e.g. any variable related to national laws on renting of dwellings or geographical location).

#### 2.4.1. Variables used to determine owner-occupiers IR using the stratification method

According to the standard method proposed by Commission Decision of 18 July 1995.

- Title (principal residence)
- Form of renting (principal residence)
- Type of dwelling (principal residence)
- Year of construction (principal residence)
- Number of rooms (principal residence)
- Useful living area in m<sup>2</sup> (principal residence)
- Years living in the same dwelling (principal residence)
- Population density domain

Although this list could be enough for many countries, Eurostat admits that some other variables could also be used, particularly some of the variables listed in the following point.

#### 2.4.2. Variables used to determine owner-occupiers IR using econometric methods

Econometric models are different from stratification methods several ways:

- (1) They use regression techniques instead of stratification techniques.
- (2) There may be some selection bias, which must be compensated by taking into account not only the features of the dwelling but also of the household.
- (3) Generally they use many more variables for building the estimation model.

This means that the use of econometric models require more input information than stratification models. The list presented below has been taken from the experiences of some countries which have applied methods of this type. However, we would like to insist that this list may vary depending on the actual method used and the features of the market of rented dwellings in each country. Therefore, it must be regarded only as a guide and never as a final list.

### VARIABLES DESCRIBING THE MAIN FEATURES OF THE DWELLING AND ITS SURROUNDING

All the variables listed in the point 2.4.1 plus the following. Most of the following variables are not included in the list to be supplied to Eurostat.

- Garage (principal residence)
- Indicator of quality and comfort of the dwelling

Scale indicating the availability of running water, separate WC, bath room, central heating, double glazing, heating system for the garage, connections for telecommunications systems (high speed internet, cable or satellite TV...), air-conditioning system, security system (alarm, CCTV, a safe ...), balcony, garden, children playground, private swimming pool, sauna, and so on.

• Availability of services in proximity to the dwelling

Scale indicating the proximity to shopping areas, sports facilities, educational centres, leisure centres, health centres, administrative offices, and so on.

#### • Orientation of the dwelling

North, South, East or West.

#### • Climatic zone

Required only if the country may be split into zones with different climates and the climate may affect the dwelling's features.

#### VARIABLES DESCRIBING THE MAIN FEATURES OF THE HOUSEHOLD

These variables are required by certain methods, such as Heckman's, in order to compensate the sample selection bias. In some countries this bias may be negligible, however very often this is not the case and we are obliged to estimate the effects of the dependence between the type of household and the housing costs.

All the variables required for this analysis are also required for other purposes and they have been already included in the list presented above. Anyhow, we are going to summarise them just below:

- Household size
- Type of household
- Net income
- Sex of the reference person
- Age (in completed years) of the reference person
- Marital status of the reference person
- Level of studies completed by the reference person
- Activity status of the reference person
- Occupation of the reference person
- Status in employment of the reference person
- Sector of the reference person

#### 3. PROPOSED FORMAT FOR THE TRANSMISSION OF MICRO-DATA FILES

#### 3.1. Numbering convention

Since some changes in the variable list are proposed, the question of how each variable is denominated arises again. In this section we give the main guidelines of the convention used to assign variables identifiers.

The proposed convention respects as much as possible the previous assignments of identifiers. This is done in order to facilitate the re-use of existing documentation and computer programs. That means that:

- The new variables take new identifiers, never used before.
- The identifiers of removed variables are not used any more for other variables.
- The variables kept unchanged remain with the same identifiers as before.

Therefore the proposed variable numbering does not necessarily correlate; there are numbers that are not used any more to identify a variable.

Explanation of the codes in the "FORMAT" column:

CHA X String of X alphanumeric characters

e.g.: CHAR 4 means that we can have strings up to 4 characters

INT X Integer values (X = number of positions)

e.g.: INT 1 means that we can have numbers from 0 up to 9

INT 4 means that we can have numbers from 0 up to 9999

DEC X.Y Decimal values (X = number of positions for the integer part;

Y = number of positions for the decimal part)

Plus 2 for the sign and decimal point.

e.g.: DEC 7.2 means that we can have numbers from 0.0 up to 99999.99

Note: Eurostat suggests that a Character Format (CHA) is used for all variables containing 'Modalities', i.e. lists of Codes, especially those containing Codes with a leading zero. This CHA format corresponds to the \$n. format in SAS.

#### **3.2.** Proposed format

We propose to standardise the file format for the transmission of the HBS micro-data to Eurostat. File format:SAS or TSV file format may be used

File names: "hh\_basic.sas7bdat" or "hh\_basic.tsv" for the basic variables at household level

"hm\_basic.sas7bdat" or "hm\_basic.tsv" for the basic variables at household member level "derived.sas7bdat" or "derived.tsv" for the derived variables.

Format of file contents:

The columns should contain the variables (one variable per column) and one row should refer to one household

In case of text files, the first row of the file will contain the names of the variables and the second row will contain 000000 for Numeric Variables and "CHARACTER" for the others.

Since SAS does not allow dots within identifiers, dots/underscores will be removed from the variable names proposed in this list, when imported into the Eurostat HBS IT System (e.g. the variable HH09.9 will be identified as HH099 in SAS).

#### 3.3. Standard nomenclatures and classifications

Eurostat proposes to use the most recent versions of the standard nomenclatures and classifications wherever applicable. The following table presents the most important nomenclatures and classifications for HBS:

CLASSIFICATION	CONCEPT TO BE BROKEN DOWN BY THE
	PROPOSED CLASSIFICATIONS
COICOP 5-DIGIT 2013	Consumption expenditure of households
NUTS 2013 (1- & 2-digit level )	Territorial units and regions
ISCED-2011	Education level
ISCO08	Occupation
ISO 3166	Codes for the Country names
NACE rev 2	Economic Sector in Employment

Detailed information about all these nomenclatures may be found in RAMON, the Eurostat's classification server at the URL: <a href="http://ec.europa.eu/eurostat/ramon/index.cfm?TargetUrl=DSP\_PUB\_WELC&StrLanguageCode=EN">http://ec.europa.eu/eurostat/ramon/index.cfm?TargetUrl=DSP\_PUB\_WELC&StrLanguageCode=EN</a>

#### 4. DATA TRANSMISSION PROCEDURE

In June 2005, the Directors and Heads of Unit adopted the principle of a Single Entry Point (SEP) for data sent to Eurostat. In May 2006, the Statistical Program Committee (SPC) endorsed the SEP strategy. At its meeting on 12 February 2008, the Eurostat Directors' Meeting decided that eDAMIS would be compulsory for the transmission of all regular datasets as of 1 July 2008. Any exception would have to be justified by the Director concerned.

This decision has been implemented in **eDAMIS** (electronic Data files Administration and Management Information System) which is an integrated environment of data transmission tools provided by Unit B5. eDAMIS is installed in all the National Statistical Institutes (EU + main Partner Countries) and in several other organisations (ministries, agencies, central banks...). Data senders who do not have an eDAMIS installation at their disposal can connect to the **eDAMIS Web Portal** on the Internet and upload their data via the Single Entry Point.

eDAMIS can transmit any data file format (standard formats are GESMES and <u>SDMX</u>) and allows highly secure transmission of confidential data. As an alternative to Excel sheets, eDAMIS Web Forms are available.

eDAMIS provides management services: inventory of datasets, traffic reports, links between datasets and national organisations, automatic reminders, forwarding functions, data confidentiality, etc.

Tools and services for data transmission and message standardisation (GESMES, SDMX) are made available, promoted and supported Eurostat directorate B.

The EDAMIS web portal may be found here:

https://webgate.ec.europa.eu/edamis/login/index.cfm?TargetUrl=disp\_login

#### 5. DOCUMENTATION

Eurostat would like to receive in a separate documentation file the following information:

- the method used to estimate the average food consumption per adult equivalent,
- the list of COICOP 5-DIGIT headings where the food products used in the national survey deviates from the list of food products, including the differences with the recommended list of products.
- When the countries are transmitting the micro data files they need also send Eurostat additional important Meta-data as described below. Countries are still obliged to send to EUROSTAT a complete formal Quality Report at a later stage.

#### **5.1.** Table 1: Overall information

Title of the survey	Name of the household budget survey used at national level		
Reference years	Reference year of the HBS data as collected by the countries. In case HBS data pertaining to		
	several years are provided, all the reference years must be reported		
Frequency	Frequency at which HBS is conducted at national level: continuous, annual, every five years or		
Frequency	other		
Achieved sample	Total number of households which were successfully surveyed (interviews+diaries)		
size	Total number of nodseriolds which were successfully surveyed (interviews) diames)		
EUR/NAC	For the euro area countries, the rate is 1. Otherwise, HBS data on income and expenditure are		
conversion factor	collected in NAC and has to be converted into Euro for dissemination at Eurostat level by		
Conversion factor	applying a conversion factor		
NAC/PPS	Since most of the HBS expenditure aggregates are expressed in PPS, a NAC/PPS conversion		
conversion factor	factor must be applied to the expenditure data		

#### 5.2. Table 2: Main sampling characteristics

5.2. Table	2. Wann sampling characteristics
Ultimate sampling unit	The Household Budget surveys collect information on households and persons as well. In many countries, the household itself constitutes the ultimate sampling unit (USU) but, on the other hand, households are only "built" around the selected addresses, dwellings or persons in some other countries. The latter involves enumerating all the households occupying an address or a dwelling, or having at least one sample person as current member. Consequently, the ultimate sampling unit is the address, the dwelling or the person
Probability sampling	Any HBS sample should meet the basic requirement of probability sampling in design. By probability sampling is meant a sampling scheme in which each unit in the study population is given a known, non-zero probability of selection into the sample
Number of sampling stages	Most HBS sample designs involve the selection of the sample in multiple stages. A common practice is to use a two-stage selection. First, a sample of geographical areas is selected, typically with probabilities proportional to size. The second stage consists of the simple random selection, within each sample area, of households or addresses for inclusion in the survey. On the other hand, some countries draw their HBS samples using a single-stage sampling scheme involving direct selection of addresses or households. Finally, non-probabilistic schemes (quotas) were also used in previous HBS rounds
Stratification criteria	Most countries stratify the sample according to certain criteria, thus hoping to make it more accurate. Common stratification criteria are region, socio-economic status of reference person, household size or type
Over-sampling of special domains	In most cases, the entire population is sampled uniformly and the sample is distributed proportionately across different areas and population groups in the country. However, some population groups of special interest may happen to be over-sampled
Survey population: main exclusions	All Household Budget surveys are confined to the population residing in private households. Collective or institutional households (old people's homes, hospitals, hostels, boarding houses, prisons) are excluded, as are generally homeless people. As to geographical coverage, most HBS cover the entire population residing in private households in the national territory. However, for reasons of cost and accessibility, some remote areas with very small populations

	may be excluded. Occasionally, some more important groups have also been excluded
Sampling frame	Basically, there are three main sources for sample selection:  Registers: registers can provide up-to-date lists of households or individuals, with many relevant characteristics useful for stratification and efficient selection of the sample.  Use of an area frame: another way to select a sample is to obtain a sample of area units from a suitable source such as population census or a master sample of areas. In the areas selected, lists of addresses, households or persons may be prepared or updated from other sources in order to complete the process of sample selection.  Use of an existing larger sample: if the larger sample obtains relevant auxiliary information, that information can be used to improve the quality of the sample (stratification, weighting for non-response). On the other hand, using households which have been already included in another survey increase the respondent burden. It may also damage the representativity of the sample, because it is certainly difficult to include households which have already refused to co-operate in an earlier survey.
Whether substitutions are allowed	Because of high rates of non-response, it is common in Household Budget Surveys to substitute for non-respondents in the sample that was originally selected. Substitutions are usually made after matching with characteristics of the non-respondent to the extent possible.

**5.3.** Table 3: Sample size and non-response errors

-	By "gross" sample is meant the sample that is initially drawn from the sampling		
Gross sample size	frame. Generally, a gross sample contains both eligible units and units which are not		
Gross sample size	eligible for the survey (dwellings which do not exist, vacant). At this stage,		
	sampling units may be households, dwellings, addresses or persons		
Number of eligible units	It refers to the total number of sampling units initially selected minus those which are		
Number of engible units	not eligible for the survey (dwellings which do not exist, vacant)		
Number of units			
successfully contacted -			
BEFORE SUBSTITUTION	This is the total number of eligible sampling units which have been successfully		
Number of units	accessed		
successfully contacted -			
AFTER SUBSTITUTION			
Number of responding	This is the total number of households which have successfully		
households - BEFORE	co-operated with the survey, both with the interviews and the completion of the		
SUBSTITUTION	diaries. The practice of making substitutions for non-responding households further		
Number of responding	complicates the picture concerning response rates. Simply computing response rate		
households - AFTER	as the ratio of the number of households completed, to the number contacted, will		
SUBSTITUTION	provide an over-estimate in the presence of substitution		

**5.4.** Table 4: Weighting

Table it it egitting			
Calculation of the household	The household design weights lead to unbiased values for totals estimated from the		
	gross sample. They are generally calculated for each sampling unit as the reciprocal of		
design weights	the probability of selection of the unit		
Weight adjustments for non-	Description of any weight adjustments that are done to correct non-response at		
response at household level	household level		
Weight adjustments to	Description of any weight adjustments to external data sources. In most cases, the		
external data sources	calibration technique makes the accuracy better, therefore, is widely used to improve		
(calibration)	the quality of survey data		
Any other weight	For instance, trimming or top(bottom)-coding of the weight distribution so to adjust		
adjustments	for outliers		

#### 5.5. Table 5: Estimated standard errors, confidence intervals and design effects

#### 5.9. Table 8: Data collection

5.9. Tan	ne 8: Data conecti	011
	Recording unit	The period for which a diary is maintained is called the recording period and
	Recording period	its duration and distribution over time is the primary determinant of the
	Distribution of	structure of the survey. The recording period may be of 'fixed' type, i.e.
	recording periods	defined in terms of the same calendar period for all households in the sample.
	over the survey	However, in most cases a so-called 'moving' reference period is used, the
Diaries	year	exact timing of which is different for different households in the sample. The
		recording periods are staggered over the survey period to even out the effect
	Items covered in	of seasonal and other temporal variations for the sample as a whole. This is
	the diary	done by dividing the sample into a number of sub-samples, and distributing
	tric triary	these sub-samples in terms of the recording period uniformly over the survey
		period
	Instrument	A sample household may be subject to more than one interview during the
	Recording unit	time it is in the survey. The common pattern in Household Budget surveys is
		to have two interviews per household arranged around the recording period.
Collection of		Mostly these consist of an initial interview before the recording period and a
substantive		final interview after the recording period. Generally, background
information	Items covered	characteristics are covered in the first interview and income questions in the
		second. However, other instruments may be used for the collection of
		substantive information, mostly registers and/or questionnaires
		(household/individual)
