Annex 10 – SR statistics - Information on 2019 data collection based on Directive (EU) 2016/801 - Students and Researchers Directive

The quality of the data is under assessment. There are possible limitation in the quality of these statistics caused by the:

- technical issues in providing the required statistics (the data collection systems at national level are under development in some countries)
- the methodological guidelines interpreted slightly different from country to country (e.g. the renewed categories might include or not the renewals of the permits not covered by the directive).

Eurostat is in touch with the country to increase the quality of these statistics. Therefore, the SR statistics are provisional for 2019. See below a table with summary information regarding the data availability and detected quality issues.
