The graph shows the observed and projected values of LU (Lands Under) over the years from 1960 to 2100. The observed values are represented by a solid line, while the projected values are shown with a dashed line. The y-axis represents the number of LU, ranging from 2e+05 to 8e+05, while the x-axis represents the year, incrementing by 20-year intervals from 1960 to 2100.
The graph shows the population (p) over time, with two lines: observed and projected. The observed line peaks around the year 2020 and then declines. The projected line is a dashed line and similarly shows a decline after peaking around the year 2020.
