Methods and definitions

The **annual rate** measures the change of the harmonised indices of consumer prices (HICP) between a month and the same month of the previous year, and the **monthly rate** compares the indices between the two latest months.

A **contribution** shows how much of the annual inflation rate comes from a particular component of the HICP. The contributions are calculated according to a method which ensures their additivity (allowing for rounding).

Revisions and timetable

A flash estimate of euro area inflation is issued at the end of each reference month. The euro area [flash estimate for November 2019](#), published on 29 November 2019, was 1.0%.

The next flash estimate of euro area inflation with data for December 2019 is scheduled for 7 January 2020.
