

110/2022 – 5 October 2022

First release for the second quarter of 2022

## Household saving rate down to 13.7% in the euro area

Business profit share decreases to 39.8%

The **household saving rate** in the **euro area** was at 13.7% in the second quarter of 2022 (compared with 15.2% in the first quarter of 2022).

These data come from a first release of seasonally adjusted quarterly European sector accounts from **Eurostat, the statistical office of the European Union**.

**Household saving rate in the euro area**  
seasonally adjusted (%)

At the same time, the **household investment rate** in the **euro area** remained nearly stable at 10.1% in the second quarter of 2022.

### Household investment rate in the euro area seasonally adjusted (%)

[ec.europa.eu/eurostat](https://ec.europa.eu/eurostat)

In the second quarter of 2022, the **profit share of businesses (non-financial corporations)** decreased slightly from 40.0% to 39.8% in the **euro area**.

### Profit share of non-financial corporations in the euro area seasonally adjusted (%)

[ec.europa.eu/eurostat](https://ec.europa.eu/eurostat)

The **business investment rate** in the **euro area** remained stable at 23.9% in the second quarter of 2022. The peaks of the business investment rate observed in 2015Q2, 2017Q2, 2019Q2, 2019Q4 and 2020Q1 are related to large imports of intellectual property products reflecting globalisation effects.

### Investment rate of non-financial corporations in the euro area seasonally adjusted (%)

ec.europa.eu/eurostat

### Household saving rate and its components

The decrease of households' saving rate in the **euro area** is explained by *consumption* increasing by 3.5%, at a faster rate than households' *gross disposable income* (+1.7%).

### Components of household saving rate in the euro area seasonally adjusted, quarter-over-quarter (%)

■ Individual consumption expenditure

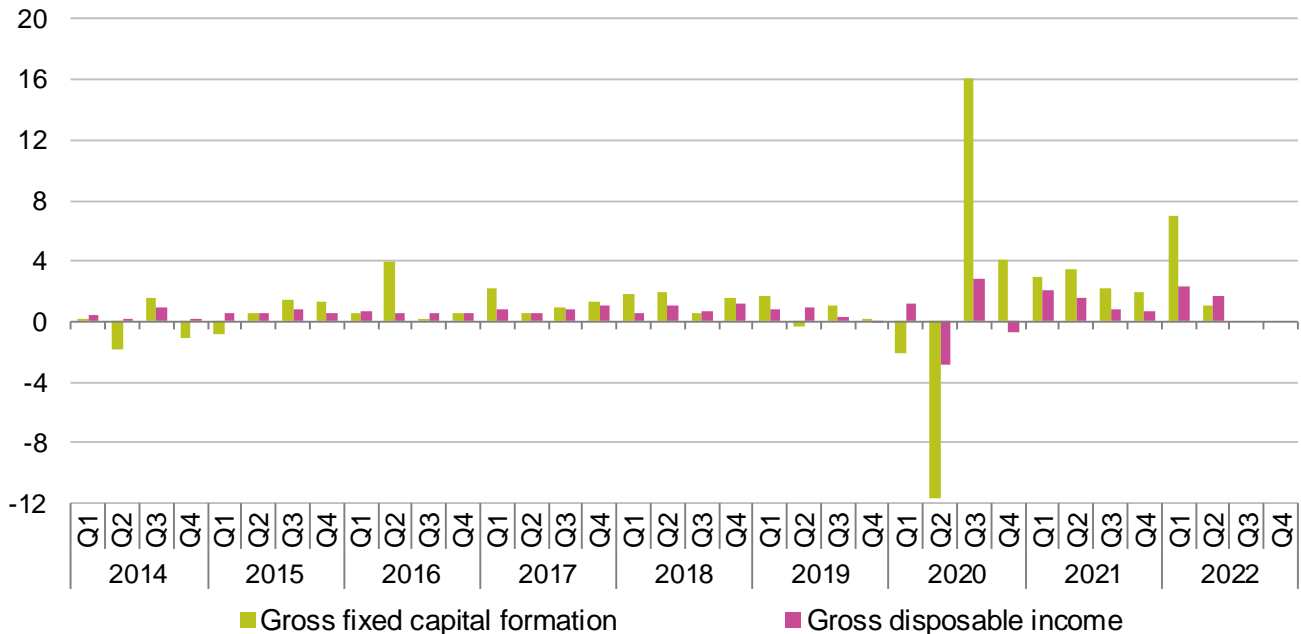

■ Gross disposable income

ec.europa.eu/eurostat

## Household investment rate and its components

Household's investment rate remained nearly stable in the **euro area** due to the growth of *gross fixed capital formation* and *gross disposable income*, by +1.1% and +1.7%, respectively.

**Components of household investment rate in the euro area**  
seasonally adjusted, quarter-over-quarter (%)

[ec.europa.eu/eurostat](https://ec.europa.eu/eurostat)

## Non-financial corporations profit share and its components

The slight decrease of business profit share in the **euro area** is explained by the increase of business *gross value added* at a slower rate (+2.0%) than *compensation of employees (wages and social contributions) plus taxes less subsidies on production* (+2.4%).

**Components of profit share of non-financial corporations in the euro area**  
seasonally adjusted, quarter-over-quarter (%)

[ec.europa.eu/eurostat](https://ec.europa.eu/eurostat)

## Non-financial corporations' investment rate and its components

Business investment rate remained stable in the **euro area** as the growth rates of business *gross fixed capital formation* and *gross value added* were similar (+2.2% and +2.0% respectively).

### Components of investment rate of non-financial corporations in the euro area seasonally adjusted, quarter-over-quarter (%)

## Geographical information

The **euro area** (EA19) consists of 19 Member States: Belgium, Germany, Estonia, Ireland, Greece, Spain, France, Italy, Cyprus, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Austria, Portugal, Slovenia, Slovakia and Finland, plus the European Central Bank, the European Stability Mechanism and the European Financial Stability Facility.

## Methods and definitions

The **gross saving rate of households** (household saving rate) is defined as gross saving divided by gross disposable income, with the latter including the change in the net equity of households in pension funds reserves. Gross saving is the part of the gross disposable income which is not spent as final consumption expenditure. Therefore, the saving rate increases when gross disposable income grows at a higher rate than final consumption expenditure.

The **gross investment rate of households** (household investment rate) is defined as gross fixed capital formation divided by gross disposable income, with the latter being adjusted for the change in the net equity of households in pension funds reserves. Household investment mainly consists of the purchase and renovation of dwellings. The **gross investment rate of non-financial corporations** is defined as gross fixed capital formation divided by gross value added. This ratio relates the investment of non-financial businesses in fixed assets (buildings, machinery etc.) to the value added created during the production process.

The **profit share of non-financial corporations** is defined as gross operating surplus divided by gross value added. This profitability-type indicator shows the share of the value added created during the production process remunerating capital. It is the complement of the share of wage costs (plus other taxes less other subsidies on production) in value added.

The compilation of the European sector accounts follows the **European System of Accounts 2010 (ESA2010)** and covers the period from the first quarter of 1999 onwards. The data comes from a first release of seasonally adjusted quarterly European sector accounts released by **Eurostat, the statistical office of the European Union** and the **European Central Bank (ECB)**.

Institutional sectors bring together economic units with broadly similar characteristics and behaviour, namely: households (including non-profit institutions serving households), non-financial corporations, financial corporations, government and the rest of the world. In the latter, to measure the external transactions of the euro area / European Union (EU), it is necessary to remove cross-border flows within the area concerned.

The method used for compilation is the same as for previous releases. However, these estimates are based on source data that are subject to revisions under the COVID-19 containment measures.

## Revisions and timetable

Compared with data released on 27 July 2022, the household saving rate for the first quarter of 2022 was revised upwards from 15.0% to 15.2%. The household investment rate was revised downwards from 10.2% to 10.1%. The profit share of non-financial corporations for the first quarter of 2022 was revised upwards from 39.2% to 40.0%. The investment rate of non-financial corporations was revised downwards from 24.3% to 23.9%.

Around 94 days after the end of the quarter, Eurostat publishes the first news release and a subset of quarterly key indicators in its website. Around 120 days after the end of the quarter, Eurostat publishes the final release and detailed annual and quarterly sector accounts of Member States of the European Economic Area and derived key indicators, including annual indicators such as debt-to-income ratios. The final news release for the second quarter of 2022, focussing on data for household real income and consumption per capita for both the euro area and the EU, will be published on 28 October 2022.
