

52/2017 - 30 March 2017

2015 GDP per capita in 276 EU regions

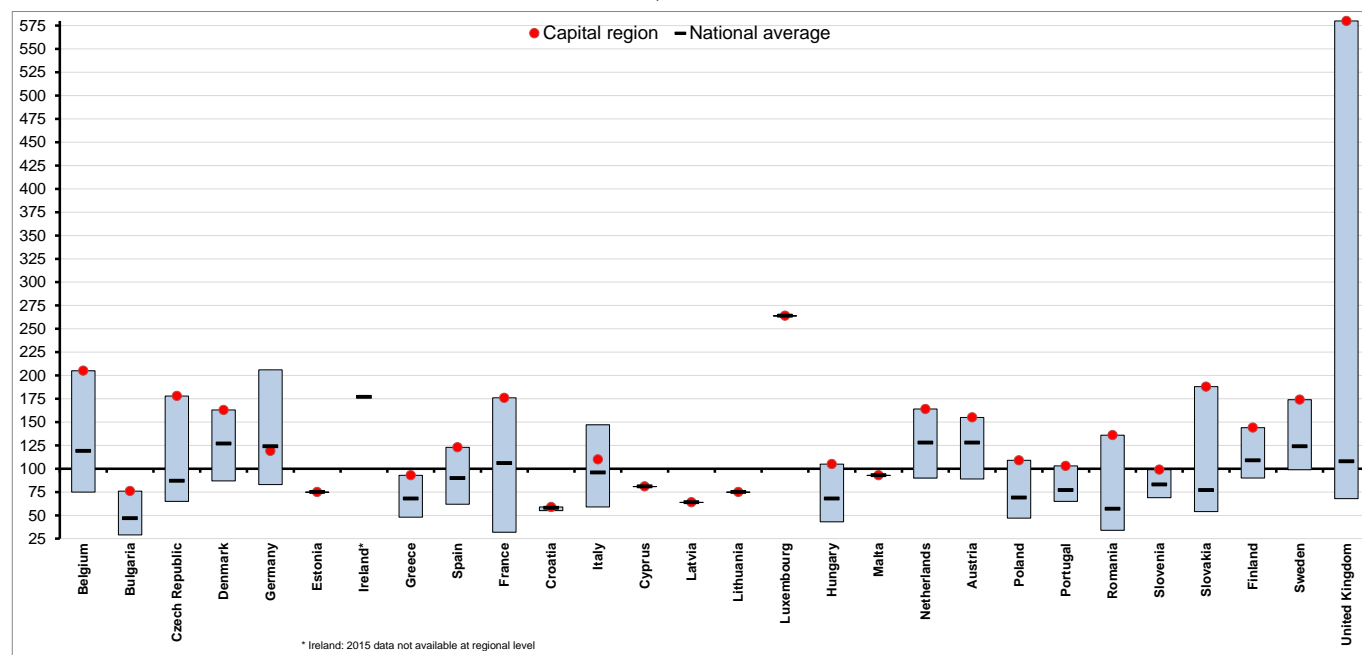

Four regions over double the EU average...

...and still nineteen regions below half of the average

In 2015, regional GDP per capita, expressed in terms of purchasing power standards, ranged from slightly less than 30% of the European Union (EU) average in the Bulgarian region of **Severozapaden**, to 580% of the average in **Inner London - West** in the United Kingdom.

This information is taken from data released by **Eurostat, the statistical office of the European Union**.

Regional GDP per capita by EU Member State in 2015
in PPS, EU28 = 100

The bar shows for each Member State the range from the region with the lowest value to that with the highest value.

The leading regions in the ranking of regional GDP per capita in 2015, after **Inner London - West** in the United Kingdom (580% of the average), were the **Grand Duchy of Luxembourg** (264%), **Hamburg** in Germany (206%) **Bruxelles/Brussel** in Belgium (205%) and **Bratislava** in Slovakia (188%).

There were 20 regions with GDP per capita 50% or more above the EU average in 2015: five were in Germany, four in the United Kingdom, two each in the Netherlands and Austria, one each in Belgium, the Czech Republic, Denmark, France, Slovakia and Sweden, as well as the Grand Duchy of Luxembourg.

After **Severozapaden** in Bulgaria (29% of the average), the lowest regions in the ranking were **Mayotte** in France (32%), **Severen tsentralen** and **Yuzhen tsentralen** in Bulgaria (both 33%) and **Nord-Est** in Romania (34%).

Among the 19 regions with GDP per capita below 50% of the EU average, five were in Bulgaria, four each in Hungary and Poland, three in Romania, two in Greece and one in France.

It should be noted, however, that in some regions the GDP per capita figures can be significantly influenced by commuter flows. Net commuter inflows in these regions push up production to a level that could not be achieved by the resident active population on its own. There is a corresponding effect in regions with commuter outflows.

* Capital region

Geographical information

These data are based on the **Nomenclature of Territorial Units for Statistics (NUTS) 2013** as set out in Commission Regulation (EU) No 1319/2013 of 9 December 2013. NUTS 2013 provides a uniform, consistent breakdown of territorial units for the production of regional statistics for the EU.

Level 2 of the nomenclature has 276 regions: Belgium (11), Bulgaria (6), the Czech Republic (8), Denmark (5), Germany (38), Ireland (2), Greece (13), Spain (19), France (27), Croatia (2), Italy (21), Hungary (7), the Netherlands (12), Austria (9), Poland (16), Portugal (7), Romania (8), Slovenia (2), Slovakia (4), Finland (5), Sweden (8) and the United Kingdom (40). Estonia, Cyprus, Latvia, Lithuania, Luxembourg and Malta are all considered as single regions at NUTS 2 level.

Methods and definitions

GDP, and thus **GDP per capita**, provides a measure of the total economic activity in a region. It may be used to compare the degree of economic development of regions. GDP does not measure the income ultimately available to private households in a region.

The **PPS** (purchasing power standard) is an artificial currency that takes into account differences in national price levels. This unit allows meaningful volume comparisons of economic indicators over countries. Aggregates expressed in PPS are derived by dividing aggregates in current prices and national currency by the respective Purchasing Power Parity (PPP).

<i>Extra-regio*</i>	4 277		3 270		

* **Extra-regio:** The extra-regio territory is made up of parts of the economic territory of a country which cannot be assigned to a single region. It consists of the national air-space, territorial waters and the continental shelf lying in international waters over which the country enjoys exclusive rights, territorial exclaves, deposits of oil, natural gas etc. worked by resident units.

Until 2011, the gross value added (GVA) produced in the extra-regio was allocated pro-rata to the inhabited regions of the country concerned. The order of magnitude of the extra-regio GVA depends in particular on the resource endowment in terms of natural gas and oil. For EU Member States the share of extra-regio GVA varies typically from almost zero to about 2.5% of total GVA at national level. In 2011, Member States and the European Commission agreed to give countries the possibility to calculate regional GDP also for the extra-regio. The resulting GDP is available only in absolute values, because the extra-regio territory by definition does not have a resident population.

Member States are entitled, but not obliged to calculate GDP for the extra-regio. In the table extra-regio GDP appears only for those Member States which decided to make use of this possibility.
