

First estimates for 2018

Wide variation of consumption per capita across EU Member States

GDP per capita ranged from 50% to 254% of EU average

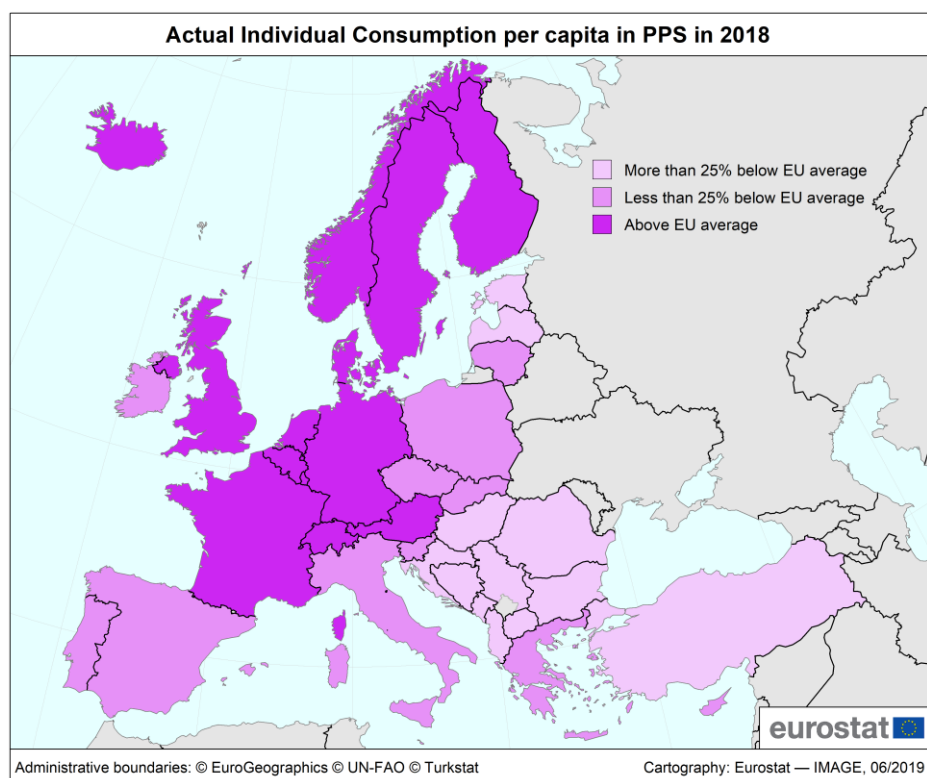

Actual Individual Consumption (AIC) is a measure of material welfare of households. Based on first preliminary estimates for 2018, AIC per capita expressed in Purchasing Power Standards (PPS) varied from 56% to 132% of the **European Union** (EU) average across the Member States.

Ten Member States recorded AIC per capita above the EU average in 2018. The highest level in the EU was recorded in **Luxembourg**, 32% above the EU average. **Germany** was around 20% above, followed by **Austria**, **Denmark**, the **United Kingdom**, the **Netherlands**, **Finland**, **Belgium**, **Sweden** and **France**, which all recorded levels between around 5% and 15% above the EU average.

AIC per capita for twelve Member States lay between the EU average and 25% below. In **Italy**, **Cyprus**, **Ireland**, **Spain** and **Lithuania** the levels were 10% or less below the EU average, while **Czechia**, **Portugal** and **Malta** were between 10% and 20% below and **Poland**, **Slovenia**, **Slovakia** and **Greece** between 20% and 25% below.

Six Member States recorded AIC per capita 25% or more below the EU average. **Estonia** was 26% below, **Latvia** and **Romania** were 30% below, while **Hungary** and **Croatia** had AIC per capita just under 40% below and **Bulgaria** was 44% below.

These figures for Actual Individual Consumption per capita, expressed in PPS, are published by **Eurostat**, the statistical office of the European Union.

GDP per capita ranged from 50% in Bulgaria to 254% in Luxembourg, of EU average

Gross Domestic Product (GDP) per capita, a measure of economic activity, also shows substantial differences between the EU Member States. In 2018, GDP per capita expressed in PPS ranged between 50% of the EU average in **Bulgaria** and 254% in **Luxembourg**. Eleven Member States recorded a level of GDP per capita above the EU average in 2018.

Actual Individual Consumption (AIC) and GDP per capita in PPS in 2018, EU = 100

	AIC per capita	GDP per capita
EU	100	100
Euro area	104	106
Luxembourg*	132	254
Germany	121	123
Austria	116	127
Denmark	114	126
United Kingdom	113	104
Netherlands	112	129
Finland	112	110
Belgium	111	115
Sweden	109	121
France	107	104
Italy	98	95
Cyprus	94	87
Ireland	94	187
Spain	90	91

Geographical information

The **European Union** (EU) includes Belgium, Bulgaria, Czechia, Denmark, Germany, Estonia, Ireland, Greece, Spain, France, Croatia, Italy, Cyprus, Latvia, Lithuania, Luxembourg, Hungary, Malta, the Netherlands, Austria, Poland, Portugal, Romania, Slovenia, Slovakia, Finland, Sweden and the United Kingdom.

The **euro area** includes Belgium, Germany, Estonia, Ireland, Greece, Spain, France, Italy, Cyprus, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Austria, Portugal, Slovenia, Slovakia and Finland.

Methods and definitions

First estimates for 2018 presented in this News Release are based on GDP and population data for 2018, extracted on 3 June 2019, and the most recent PPPs available. Revised estimates will be published in December 2019.

Actual Individual Consumption consists of goods and services actually consumed by individuals, irrespective of whether these goods and services are purchased and paid for by households, by government, or by non-profit organisations. In international volume comparisons of consumption, AIC is often seen as the preferable measure, since it is not influenced by the fact that the organisation of certain important services consumed by households, like health and education services, differs a lot across countries.

The **Purchasing Power Standard** (PPS) is an artificial currency unit that eliminates price level differences between countries. Thus one PPS buys the same volume of goods and services in all countries. This unit allows meaningful volume comparisons of economic indicators across countries. Aggregates expressed in PPS are derived by dividing aggregates in current prices and national currency by the respective Purchasing Power Parity (PPP). The level of uncertainty associated with the basic price and national accounts data, and the methods used for compiling PPPs imply that differences between countries that have indices within a close range should not be over-interpreted.

Country note:

Luxembourg: The high GDP per capita in Luxembourg is partly due to the country's large share of cross-border workers in total employment. While contributing to GDP, these workers are not taken into consideration as part of the resident population which is used to calculate GDP per capita.
