## European Union and euro area: Economic sentiment continuing its recovery in September 2020, after GDP growth falling at unprecedented rates in Q2 2020

In the **euro area**, GDP fell steeply quarter-on-quarter by 11.8 % and year-on-year by 14.7 % in Q2 2020, a quarter still marked by COVID-19 containment measures in most Member States. These were by far the sharpest declines in GDP observed for the euro area since the time series started in 1995. In Q1 2020, GDP decreased quarter-on-quarter by 3.7 % and year-on-year by 3.2 %.

In August 2020, a month marked by some relaxation of COVID-19 containment measures in many Member States, the volume of retail trade rose month-on-month by 4.4 % and year-on-year by 3.7 % in the euro area, following a month-on-month decrease of 1.8 % and a year-on-year decrease of 0.1 % in July 2020.

The unemployment rate in the euro area was 8.1 % in August 2020, after 8.0 % in July 2020.

The euro area annual inflation rate (HICP) is expected to be -0.3 % in September 2020, down from -0.2 % in August 2020, according to a flash estimate from Eurostat. Looking at the main components of euro area inflation, food, alcohol & tobacco is expected to have the highest annual rate of 1.8 % in September 2020, down from 1.7 % in August 2020. The annual inflation rate for energy is expected to be -8.2 % in September 2020, down from -7.8 % in August 2020.

The Economic Sentiment Indicator (ESI) for the euro area continued to recover, albeit at a somewhat slower speed, in September 2020. The ESI grew month-on-month by 3.6 points to 91.1 in September 2020 and has so far recovered around 70 % of its combined losses of March and April 2020. In August 2020, the ESI recovery was driven by further waning pessimism in industry, retail trade, construction and, in particular, services. Confidence also improved among consumers, but to a lesser extent.

In September 2020, DG ECFIN's Employment Expectations Indicator improved month-on-month by 2.3 points to 91.8 in the euro area.

In the **European Union** (EU-27), the quarter-on-quarter GDP growth rate fell by an unprecedented 11.4 % in Q2 2020, after a decrease of 3.3 % in Q1 2020. The year-on-year GDP growth rate followed the same pattern falling by an unparalleled 13.9 % in Q2 2020, after a decrease of 2.7 % in Q1 2020.

In the EU-27, the Economic Sentiment Indicator grew month-on-month by 3.4 points to 90.2 in September 2020 and was 12.8 points below its level in February 2020, just before COVID-19 containment measures were introduced in Member States.

## Situation in EU Member States: Economic sentiment continuing to recover in France, Germany, Italy and Spain in September 2020, after GDP declining sharply in Q2 2020

In September 2020, economic sentiment continued to improve in France, Germany, Italy and Spain, the largest EU economies, after GDP declining sharply in Q2 2020.

In **Germany**, the quarter-on-quarter GDP growth rate dropped sharply to -9.7 % in Q2 2020 from -2.0 % in Q1 2020. The year-on-year GDP growth rate fell sharply to -11.3 % in Q2 2020 from -2.2 % in Q1 2020. The unemployment rate was stable at 4.4 % in August 2020 compared with July 2020. The Economic Sentiment Indicator grew to 95.5 in September 2020 from 94.3 in August 2020 and was 6.3 points below its level in February 2020.

In **France**, the quarter-on-quarter GDP growth rate dropped sharply to -13.8 % in Q2 2020 from -5.9 % in Q1 2020. The year-on-year GDP growth rate fell sharply to -18.9 % in Q2 2020 from -5.7 % in Q1 2020. The unemployment rate increased to 7.5 % in August 2020 from 7.1 % in July 2020. The ESI increased to 96.6 in September 2020 from 90.8 in August 2020 and was 8.9 points below its level in February 2020.

In **Italy**, the quarter-on-quarter GDP growth rate fell sharply to –13.0 % in Q2 2020 from –5.5 % in Q1 2020. The year-on-year GDP growth rate fell sharply to –18.0 % in Q2 2020 from –5.6 % in Q1 2020. As a result of travel restrictions implemented in response to the Covid-19 outbreak, the number of nights spent in tourist accommodation establishments dropped excessively year-on-year by 78.6 % in June 2020. The unemployment rate decreased slightly to 9.7 % in August 2020 from 9.8 % in July 2020. The ESI jumped to 89.0 in September 2020 from 80.6 in August 2020 and was 12.3 points below its level in February 2020.

In **Spain**, the quarter-on-quarter GDP growth rate fell sharply to –17.8 % in Q2 2020 from –5.2 % in Q1 2020. The year-on-year GDP growth rate dropped sharply to –21.5 % in Q2 2020 from –4.2 % in Q1 2020. The number of nights spent in tourist accommodation establishments dropped excessively year-on-year by 92.4 % in June 2020 and 66.0 % in July 2020. The unemployment rate increased to 16.2 % in August 2020 from 15.9 % in July 2020. The ESI increased to 89.7 in September 2020 from 88.1 in August 2020 and was 13.0 points below its level in February 2020.

## International context: GDP growth down sharply in the United States while rebounding significantly in China in Q2 2020

In the **United States**, the quarter-on-quarter GDP growth rate fell significantly to –9.0 % in Q2 2020 from –1.3 % in Q1 2020. The year-on-year GDP growth rate dropped sharply to –9.0 % in Q2 2020 from 0.3 % in Q1 2020. The annual consumer price index grew to 0.9 % in August 2020 from 0.4 % in July 2020. The unemployment rate decreased to 8.4 % in August 2020 from 10.2 % in July 2020.

Concerning the BRICS countries (Brazil, Russia, India, China and South Africa), in **China**, the quarter-on-quarter GDP growth rate rebounded significantly to 11.5 % in Q2 2020 from –10.0 % in Q1 2020. The year-on-year GDP growth rate grew to 3.2 % in Q2 2020 from –6.8 % in Q1 2020. The annual consumer price index dropped to 2.4 % in August 2020 from 2.7 % in July 2020.

**India** recorded a quarter-on-quarter GDP growth of –25.2 % in Q2 2020, down sharply from 0.7 % in Q1 2020. The year-on-year GDP growth rate fell steeply to –23.5 % in Q2 2020 from 3.3 % in Q1 2020. The annual consumer price index increased to 5.6 % in August 2020 from 5.3 % in July 2020.

In **Brazil** the quarter-on-quarter GDP growth rate fell significantly to –9.7 % in Q2 2020 from –2.5 % in Q1 2020. The year-on-year GDP growth rate dropped sharply to –11.4 % in Q2 2020 from –1.4 % in Q1 2020. The annual consumer price index grew slightly to 2.4 % in August 2020 from 2.3 % in July 2020.

**Russia** recorded a quarter-on-quarter GDP growth rate of –3.2 % in Q2 2020, down from –0.9 % in Q1 2020. The year-on-year GDP growth dropped to –5.6 % in Q2 2020 from –0.1 % in Q1 2020. The annual consumer price index grew to 3.6 % in August 2020 from 3.4 % in July 2020.

In **South Africa**, the quarter-on-quarter GDP growth rate fell sharply to –16.4 % in Q2 2020 from –0.5 % in Q1 2020. The year-on-year GDP growth rate dropped sharply to –17.2 % in Q2 2020 from –0.2 % in Q1 2020. The annual consumer price index decreased to 3.0 % in August 2020 from 3.2 % in July 2020.

# 1

## Summary analysis

### Latest macroeconomic developments

Data collection for a large number of indicators published in this edition of Eurostatistics has been affected by the COVID-19 crisis. For most of the concerned indicators, data are based on fewer statistical observations than usual. More information on the compilation are available in the news releases of each indicator.

Eurostat has also published a wide range of statistics related to COVID-19 in a dedicated section of its website: [COVID-19: Statistics serving Europe](#), together with practical guidance for official statisticians on the issues triggered by COVID-19.

#### EVOLUTION OF GDP

Seasonally adjusted GDP declined by 11.8 % in the euro area (EA-19) and by 11.4 % in the EU-27 during the second quarter of 2020, compared with the previous quarter, according to an estimate published by Eurostat, the statistical office of the European Union. In the first quarter of 2020, GDP had declined by 3.3 % in EU-27 and by 3.7 % in the euro area (EA-19). Compared with the same quarter of the previous year, seasonally adjusted GDP declined by 14.7 % in the euro area and by 13.9 % in the EU-27 in the second quarter of 2020, after also -3.2 % and -2.7 % respectively in the previous quarter.

#### INDUSTRIAL PRODUCTION

In July 2020, seasonally adjusted industrial production increased by 4.1 % in both the euro area (EA-19) and the EU-27, compared with June 2020, according to estimates from Eurostat, the statistical office of the European Union. In June 2020, industrial production increased by 9.6 % in EU-27 and by 9.5 % in euro area as compared to May 2020. In July 2020 compared with July 2019, industrial production decreased by 7.7 % in the euro area and by 7.3 % in the EU-27.

#### PRODUCTION IN CONSTRUCTION

In July 2020 compared with June 2020, seasonally adjusted production in the construction sector increased by 0.2 % in the euro area (EA-19) and decreased by 0.1 % in the EU-27, according to estimates from Eurostat, the statistical office of the European Union. In June 2020, production in construction increased by 5.1 % in the euro area and by 3.8 % in the EU-27. In July 2020 compared with July 2019, production in construction decreased by 3.8 % in euro area (EA-19) and by 3.9 % in EU-27.

#### RETAIL TRADE

In August 2020 compared with July 2020, the seasonally adjusted volume of retail trade increased by 4.4 % in the euro area (EA-19) and by 3.8 % in the EU-27, according to estimates from Eurostat, the statistical office of the European Union. In July 2020, the retail trade volume decreased by 1.8 % in the euro area (EA-19) and by 1.2 % in the EU-27 compared to the previous month. In August 2020 compared with August 2019, the calendar adjusted retail sales index increased by 3.7 % in the euro area and by 3.5 % in the EU-27.

#### INFLATION

In September 2020, Euro area annual inflation is expected to be -0.3 %, down from -0.2 % in August 2020 according to a flash estimate from Eurostat, the statistical office of the European Union. In September 2019, the annual inflation rate was 0.8 % in the euro area.

#### UNEMPLOYMENT

In August 2020, the euro area (EA-19) seasonally adjusted unemployment rate slightly increased to 8.1 % from 8.0 % in July 2020. The EU-27 unemployment rate was 7.4 % in August

2020, up from 7.3 % in July 2020. These figures are published by Eurostat, the statistical office of the European Union. Eurostat estimates that 15.603 million men and women in the EU-27, of whom 13.188 million in the euro area, were unemployed in August 2020. Compared with July 2020, the number of persons unemployed increased by 238 000 in the EU-27 and by 251 000 in the euro area. Compared with August 2019, unemployment increased by 1 433 000 in the EU-27 and by 955 000 in the euro area.

## INTEREST RATES

On 10 September 2020, the Governing Council of the European Central Bank maintained its benchmark-refinancing rate at 0.0 % since 15 March 2016. On 16 September, the Federal Reserve decided to maintain the target range for the federal funds rate at 0 to ¼ percent. The Bank of Japan left the key interest rate unchanged at –0.1 % at its September 2020 meeting, after a decrease from 0.0 % in December 2015. In September 2020, the Bank of England Monetary Policy

Committee maintained its benchmark bank rate at 0.1 %. The euro area's 3-month rate, Euribor, decreased from –0.48 % in August to –0.49 % in September 2020. Long-term interest rates (monthly average weighted 10-year government bond yield) of the euro area decreased to 0.00 % in August 2020, from 0.05 % in July 2020. The EU-27 long-term interest rates decreased to 0.25 % in August 2020, from 0.29 % in July 2020.

## EXCHANGE RATES

The euro/US dollar exchange rate (monthly average) decreased to USD at 1.1792 in September 2020, from USD 1.1828 in August 2020. The euro/Japanese yen exchange rate decreased to JPY 124.50 in September 2020, from JPY 125.40 in August 2020. The euro increased against the Swiss franc to CHF 1.0786 in September 2020, from CHF 1.0767 in August 2020. The euro/UK pound sterling exchange rate increased to GBP 0.909 in September 2020, from GBP 0.901 in August 2020.

# Growth forecasts for the euro area (1)

## Growth assessment

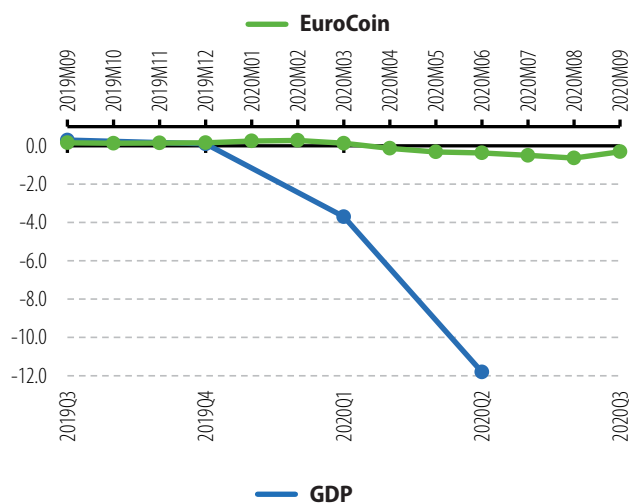

In the extraordinary times of COVID-19 spreading over the world and having major health and economic impacts, which can not be tracked with usual short-term indicators, the EUROFRAME group of research institutes has decided on 6 May to suspend the release of **Euro Growth Indicator** estimates until further notice.

The **€-coin** turned upwards from –0.64 in August 2020 to –0.31 in September 2020, after decreasing for six consecutive months. The indicator benefited from the improvement in consumer and business confidence and a more favourable developments in non-durable goods consumption.

For a description of the sources and methods on the indicators of growth and turning points, see the [Methodological notes](#) at the end of this section.

(1) Euro area growth assessment is based on the indicators' news releases and do not necessarily reflect Eurostat's views.

## Cyclical indicators for the euro area <sup>(1)</sup>

### Growth assessment

The **Business Climate Indicator (BCI)** <sup>(2)</sup> for the euro area decreased by 1.19 points in September 2020, following a decrease of 1.34 points in August 2020.

The **Composite leading indicators (CLIs)** were published on 8 October 2020. The composite leading indicators for September 2020 continue to recover from the Covid-19 crisis lows, but at a moderating pace. For all major OECD economies, the CLIs in September 2020 continue to signal that the GDP will remain below trend. While in France and Germany, the CLIs are now pointing to a stabilisation in growth, in the United States, Japan, United Kingdom, Canada and Italy they continue to point to a moderation in growth.

Among major emerging economies, the CLIs for India and Russia continue to signal moderating growth. This is also the assessment for Brazil (albeit with the level of GDP expected to be above trend). In China, the CLI (for manufacturing) points to a stabilisation in growth.

With the resurgence of COVID-19 cases in many countries, there remains considerable uncertainty around the possibility of future mitigation measures that may curtail economic activity, and which may not be fully factored into current indicators used in the construction of the CLIs. As such this month's CLIs should continue to be interpreted with care.

As always, the magnitude of the CLI should be regarded as an indication of the strength of the signal rather than as a measure of the degree of growth in economic activity.

The **DZ BANK's Euro-Indicator** fell to its lowest level in April 2020. Since then, the indicator trended upwards uninterrupted. In September 2020, the indicator rose by 0.8 % compared with August 2020 and now stands at 97.9 points. In August 2020, the indicator was at 97.1 points. In year-to-year-terms, the loss in September 2020 was lower than in the previous month. The rate rose from -1.51 % in August 2020 to -0.61 % most recently.

<sup>(1)</sup> Euro area growth assessment is based on the indicators' releases and do not necessarily reflect Eurostat's views; IFO Economic Climate Indicator has been discontinued.

<sup>(2)</sup> The BCI press release has been discontinued.

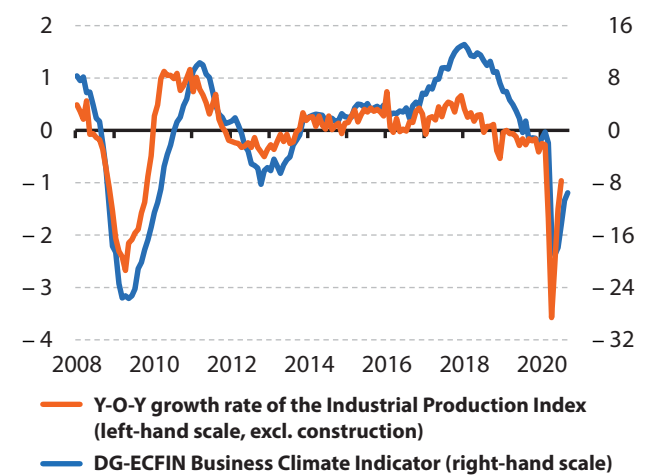

**Table 1:** Comparison of indicators of turning points in the business cycle for the euro area

(1) Due to the Covid-19 pandemic, the GDP and employment estimates for Q1 and Q2 2020, as well as the IPI estimates for M3, M4, M5, M6 and M7 2020 could be considered as values not following the previous path of the series, namely, outliers. Outliers can affect trend cycle decompositions. To reduce the impact of the last point in the time series, an outlier correction has been performed and the filters run on the corrected data. After the trend cycle decomposition, the outlier was then re-introduced in the irregular component. This is mainly visible in the decompositions obtained by the Hodrick and Prescott (HP) filter because the output cycle component includes also the irregular one (see also methodological notes).

## Methodological notes (1)

### Indicators of growth and turning points — sources and methods

The **EUROFRAME Euro Growth Indicator**: calculated by the OFCE (Paris) in cooperation with the EUROFRAME group, which consists of: CPB (Den Haag), DIW (Berlin), ESRI (Dublin), ETLA (Helsinki), IFW (Kiel), NIESR (London), PROMETEIA (Bologna), WIFO (Vienna), and CASE (Poland). The purpose of this leading indicator is to anticipate the development of the GDP in the euro area two quarters ahead of official statistics. The indicator considers surveys from industry, construction, and households, ISM survey of US industry, real euro/dollar exchange rate, and European stock index. The indicator is based on ordinary least squares (OLS) estimation of the GDP growth rate, and released on a monthly basis.

**€-COIN**: a monthly 'smoothed' estimate of quarter-on-quarter GDP growth in the euro area, calculated by the Banca d'Italia. It is obtained by collecting a large set of statistics and extracting from it information relevant to forecast future GDP. It tracks GDP growth anticipating official GDP releases by several months, by giving each month an early estimate of euro area growth in terms of quarter-on-quarter changes in GDP. Moreover, it sheds light on the underlying trend by removing short-run fluctuations and measurement errors from the growth rate; in this respect it is not only a forecast, but also an indicator of the true growth momentum in the euro area.

The **OECD Composite Leading Indicator**: designed to predict cyclical turning points (peaks and troughs) in GDP as a proxy of the business growth cycle of the overall economy. It comprises a set of component series from a wide range of economic indicators.

**DG ECFIN: Business Climate Indicator** (monthly), designed to deliver a clear and early assessment of the cyclical situation of the euro area. The indicator uses, as input, five balances of opinions from DG ECFIN's Business and Consumer Surveys. The resulting 'common factor' may be read as a survey result: the higher the level, the healthier the cyclical situation, and a rise in the indicator points to an upswing in activity and an improvement in business climate.

**DZ-Euroland-Indicator**: calculated by DZ Bank (monthly), aims at predicting recessions and has also proved to reflect movements in GDP growth rate. It is built on concepts implemented by the US Conference Board for monitoring cyclical indicators. Nine series for euro area or for the main countries are selected for their leading properties, and aggregated to give a composite index which can be compared with the level of GDP in order to anticipate recessions.

(1) IFO Economic Climate Indicator has been discontinued. On 9 April IFO Institute published a new special issue on Eurozone Economic Outlook: [https://www.ifo.de/sites/default/files/secure/prognosen/EZEO\\_20Q1\\_en.pdf](https://www.ifo.de/sites/default/files/secure/prognosen/EZEO_20Q1_en.pdf).

### Trend-cycle decomposition

A trend-cycle decomposition method aims at further decomposing seasonally adjusted data into a trend component and a cyclical component (expressed as deviation from the trend). Identifying and estimating the trend and cyclical components of key economic indicators is very relevant: the trend provides information on longer-term movements in the seasonally adjusted series over several years; the cycle is a sequence of smoother fluctuations around the longer-term trend in part characterised by alternating periods of expansion and contraction.

There are many alternative methods to identify and estimate the trend and cycle components in time series. The estimates for three indicators — GDP, industrial production, and employment — are produced using three different filters:

**Hodrick-Prescott (HP)**: a filter widely used in macroeconomics to fit a smooth curve through a set of points.

**Christiano-Fitzgerald (CF)**: a well-known approximation to an ideal band pass filter, estimated non-parametrically.

**Unobserved Components (UC)**: a parametric approach which involves estimating a statistical model and decomposing the series into components, including the trend and cycle.

Since seasonally adjusted data also include an irregular component, it is important how this component is treated in trend-cycle decomposition methods. So-called de-trending methods, such as the HP filter, decompose the series as a sum of a trend and a cyclical component. In this case, the cycle also contains the irregular component. Cycle extraction methods, such as the CF filter, first extract the cyclical component within a pre-specified band of frequencies and then estimate the trend as the difference between the original series and the cycle component. In this case, the trend also contains the irregular component. Finally, the UC model estimates simultaneously the trend, the cycle and the irregular components, under some hypotheses, so that neither the trend nor the cycle contain the irregular component. A good understanding of the various components stemming from trend-cycle decomposition methods is essential, especially, in the presence of outliers at the end of the time series. In fact, different types of outliers affect different components: additive outliers typically affect the irregular component so that they will be visible in the HP filtered cycle and in the CF filtered trend and not in the trend or cycle components obtained by the UC approach. Finally, other types of outliers such as a level shift or a ramp effect will typically impact the trend. A ramp effect is a smooth, linear transition between

two time points unlike the abrupt change associated with a level shift. Understanding the nature of an outlier can require several times series points.

## Period Comparisons

**Q/Q-1:** quarter-on-quarter (q-o-q) growth/change in percentage for quarterly indicators where the difference between the value of a given quarter (Q) and that of the previous quarter (Q-1) is divided by the value of the previous quarter (Q-1) and multiplied by 100.

**Q/Q-4:** year-on-year (y-o-y) growth/change in percentage for quarterly indicators where the difference between the value of a given quarter (Q) and that of the same quarter of the

previous year (Q-4) is divided by the value of the same quarter of the previous year (Q-4) and multiplied by 100.

**M/M-1:** a month-on-month (m-o-m) growth/change in percentage for monthly indicators where the difference between the value of a given month (M) and that of the previous month (M-1) is divided by the value of the previous month (M-1) and multiplied by 100.

**M/M-12:** a year-on-year (y-o-y) growth/change in percentage for monthly indicators where the difference between the value of a given month (M) and that of the same month of the previous year (M-12) is divided by the value of the same month of the previous year (M-12) and multiplied by 100.

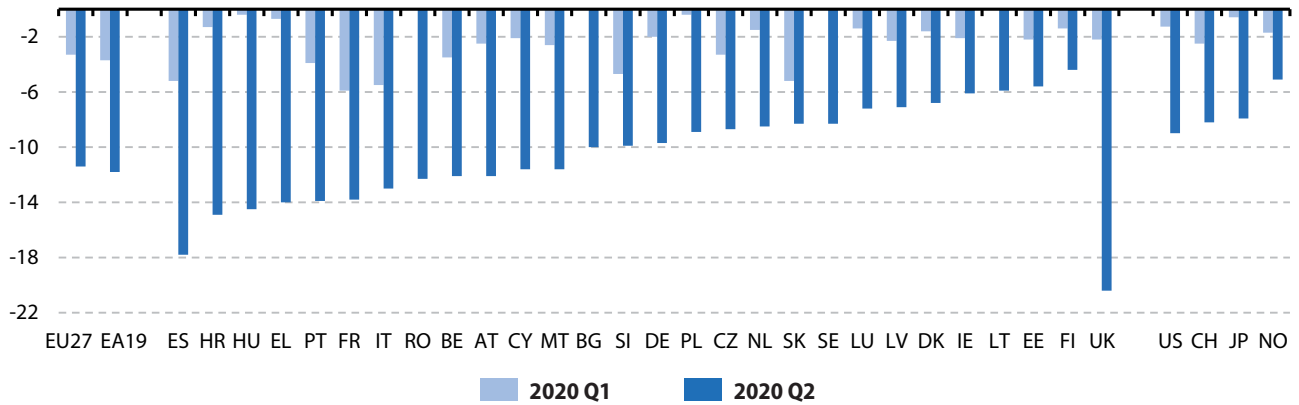

# 2

## Cross-country comparisons

This part presents the selected Principal European Economic Indicators (PEEIs) complemented by certain monetary and financial indicators for the EU Member states and some other countries.

Indicator: Source:  
 3 month Interest rate ECB  
 Long term government bond yields ECB  
 Economic Sentiment Indicator European Commission's DG for Economic and Financial Affairs (DG ECFIN)

(¹) Due to the fact that the Luxembourg Government does not have outstanding long-term debt securities with a residual maturity of close to ten years, the indicator is based on a basket of long-term bonds. This basket has an average residual maturity of close to ten years. The bonds are issued by a private credit institution and the indicator is thus not fully harmonised" (source ECB).

## **Getting in touch with the EU**

### **In person**

All over the European Union there are hundreds of Europe Direct Information Centres. You can find the address of the centre nearest you at: <https://europa.eu/contact>

### **On the phone or by e-mail**

Europe Direct is a service that answers your questions about the European Union. You can contact this service

- by freephone: 00 800 6 7 8 9 10 11 (certain operators may charge for these calls),
- at the following standard number: +32 22999696 or
- by electronic mail via: <https://europa.eu/contact>

## **Finding information about the EU**

### **Online**

Information about the European Union in all the official languages of the EU is available on the Europa website at: <https://europa.eu>

### **EU publications**

You can download or order free and priced EU publications from EU Bookshop at: <http://bookshop.europa.eu>. Multiple copies of free publications may be obtained by contacting Europe Direct or your local information centre (see <https://europa.eu/contact>).

### **EU law and related documents**

For access to legal information from the EU, including all EU law since 1951 in all the official language versions, go to EUR-Lex at: <https://eur-lex.europa.eu>

### **Open data from the EU**

The EU Open Data Portal (<https://data.europa.eu/euodp/en/data>) provides access to datasets from the EU. Data can be downloaded and reused for free, both for commercial and non-commercial purposes.

# Eurostatistics

## DATA FOR SHORT-TERM ECONOMIC ANALYSIS

Eurostatistics — Data for short-term economic analysis — shows the evolution of the economic activity in the European Union, euro area and Member States. This monthly review gives a synthetic picture of the macroeconomic situation in the recent past. It is based on Principal European Economic Indicators (PEEIs), complemented by some business cycle indicators.

---
