European Union and euro area: Economic sentiment continues to climb in April 2021, while GDP contracts in Q1 2021

In the **euro area**, GDP decreased quarter-on-quarter by 0.6 % in Q1 2021, according to a preliminary flash estimate published by Eurostat. This follows a decline of 0.7 % in Q4 2020. In year on year terms, GDP decreased by 1.8 % in Q1 2021.

In March 2021, the volume of retail trade rose month-on-month by 2.7 % and year-on-year by 12.0 % in the euro area. This follows a month-on-month increase of 4.2 % and a year-on-year decline of 1.5 % observed in February.

The unemployment rate in the euro area was 8.1 % in March 2021, down slightly from 8.2 % in February and up from its pre-pandemic level 7.3 % in February 2020.

The euro area annual inflation rate (HICP) is expected to be 1.6 % in April 2021, up from 1.3 % in March, according to a flash estimate from Eurostat. Looking at the main components of euro area inflation, 'energy' is expected to have the highest annual rate (10.3 % in April 2021, up from 4.3 % in March), followed by 'services' (0.9 % in April, down from 1.3 % in March) and 'food, alcohol & tobacco' (0.7 % in April, down from 1.1 % in March).

DG ECFIN's Economic Sentiment Indicator (ESI) for the euro area continued its strong recovery, increasing month-on-month by 9.4 points to 110.3 in April 2021. This follows an increase of 7.5 points in March 2021. The ESI score was markedly above its long-term average of 100, and 6.3 points above its pre-pandemic level in February 2020. In April 2021, the ESI's increase was driven by improved confidence in all surveyed business sectors and among consumers.

In April 2021, DG ECFIN's Employment Expectations Indicator jumped month-on-month by 9.3 points to 107.1 in the euro area.

In the **European Union** (EU), GDP decreased quarter-on-quarter by 0.4 % in Q1 2021 after a decline of 0.5 % in Q4 2020. In year-on-year terms, GDP decreased by 1.7 % in Q1 2021. In

March 2021, the volume of retail trade rose month-on-month by 2.6 % and year-on-year by 11.6 % in the EU.

The ESI for the EU improved sharply month-on-month, up by 9.8 points to 109.7 in April 2021, which is 5.8 points above its pre-pandemic level in February 2020.

Situation in EU Member States: Economic sentiment growing in April 2021, while GDP increases in France yet decreases in Germany, Italy and Spain in Q1 2021

In **Germany**, GDP decreased quarter-on-quarter by 1.7 % in Q1 2021 after a quarter-on-quarter increase of 0.5 % in Q4 2020. It remained below its pre-pandemic level as it decreased year-on-year by 3.0 % in Q1 2021. The unemployment rate was 4.5 % in March 2021, stable compared to February. The ESI rose month-on-month by 5.7 points to 109.4 in April 2021, following an improvement of 7.9 points in the previous month. In April 2021, the ESI was 7.2 points above its pre-pandemic level in February 2020.

In **France**, GDP increased quarter-on-quarter by 0.4 % in Q1 2021 after a quarter-on-quarter decrease of 1.4 % in Q4 2020. In year-on-year terms, GDP increased by 1.5 % in Q1 2021. The unemployment rate was 7.9 % in March 2021, down slightly from 8.0 % in February. The ESI rose month-on-month by 8.5 points to 104.7 in April 2021, following an improvement of 4.9 points in the previous month. In April 2021, the ESI was 1.1 points below its pre-pandemic level in February 2020.

In **Italy**, GDP decreased quarter-on-quarter by 0.4 % in Q1 2021 after a quarter-on-quarter decrease of 1.8 % in Q4 2020. In year-on-year terms, GDP decreased by 1.4 % in Q1 2021. The unemployment rate was 10.1 % in March 2021, down slightly from 10.2 % in February. The ESI rose month-on-month by 5.3 points to 104.8 in April 2021, following an improvement of 4.9 points in the previous month. In April 2021, the ESI was 2.7 points above its pre-pandemic level in February 2020.

In **Spain**, GDP decreased quarter-on quarter by 0.5 % in Q1 2021 after an unchanged quarter-on quarter growth rate in Q4 2020. In year-on-year terms, GDP fell by 4.3 % in Q1 2021. The unemployment rate was 15.3 % in March 2021, down slightly from 15.5 % in February. The ESI rose month-on-month by 9.1 points to 106.0 in April 2021, after an improvement of 6.2 points in the previous month. In April 2021, the ESI was 2.8 points above its pre-pandemic level in February 2020.

International context ⁽¹⁾: GDP continues to expand in the United States and China in Q1 2021

In the **United States**, GDP increased quarter-on-quarter by 1.6 % in Q1 2021 after a quarter-on-quarter increase of 1.1 % in Q4 2020. In year-on-year terms, GDP increased by 0.4 % in Q1 2021. The annual inflation rate was 2.8 % in March 2021, up from 1.6 % in February. The unemployment rate was 6.0 % in March 2021, down from 6.2 % in February.

As regards the BRICS countries (Brazil, Russia, India, China and South Africa), **China** recorded a quarter-on-quarter GDP growth rate of 0.6 % in Q1 2021 after a quarter-on-quarter increase of 2.6 % in Q4 2020. The year-on-year GDP growth

rate was 18.3 % in Q1 2021. The annual inflation rate was 0.4 % in March 2021, up from -0.2 % in February.

In **India**, GDP increased quarter-on-quarter by 7.9 % in Q4 2020 after a quarter-on-quarter improvement of 23.7 % in Q3 2020. GDP increased slightly year-on-year by 0.1 % in Q4 2020. The annual inflation rate was 5.7 % in March 2021, up from 4.5 % in February.

In **Brazil**, GDP increased quarter-on-quarter by 3.2 % in Q4 2020 after a quarter-on-quarter improvement of 7.7 % in Q3 2020. In year-on-year terms, however, GDP decreased by 1.2 % in Q4 2020. The annual inflation rate was 6.1 % in March 2021, up from 5.2 % in February.

In **Russia**, GDP decreased quarter-on-quarter by 0.2 % in Q4 2020 after a quarter-on-quarter increase of 0.6 % in Q3 2020. In year-on-year terms, GDP decreased by 2.8 % in Q4 2020. The annual inflation rate was 5.8 % in March 2021, up slightly from 5.7 % in February.

In **South Africa**, GDP increased quarter-on quarter by 1.5 % in Q4 2020 after a quarter-on-quarter improvement of 13.7 % in Q3 2020. GDP dropped year-on-year by 4.2 % in Q4 2020. The annual inflation rate was 3.2 % in March 2021, up from 2.9 % in February.

⁽¹⁾ GDP data for Q1 2021 are not available for India, Brazil, Russia and South Africa.

1

Summary analysis

Latest macroeconomic developments

Data collection for a large number of indicators published in this edition of Eurostatistics has been affected by the COVID-19 crisis. For most of the concerned indicators, data are based on fewer statistical observations than usual. More information on the compilation are available in the news releases of each indicator.

Eurostat has also published a wide range of statistics related to COVID-19 in a dedicated section of its website: [COVID-19: Statistics serving Europe](#), together with practical guidance for official statisticians on the issues triggered by COVID-19.

In December 2020, Eurostat launched the [European Statistical Recovery Dashboard](#) providing a monthly updated overview of the economic and social developments during the recovery from the pandemic crisis in the Member States and EU as a whole.

EVOLUTION OF GDP

Seasonally adjusted GDP decreased by 0.6 % in the euro area and by 0.4 % in the EU during the first quarter of 2021, compared with the previous quarter, according to flash estimates published by Eurostat. In the fourth quarter of 2020, GDP had decreased by 0.5 % in EU and by 0.7 % in the euro area. Compared with the same quarter of the previous year, seasonally adjusted GDP declined by 1.8 % in the euro area and by 1.7 % in the EU in the first quarter of 2021, after a decline of 4.9 % and 4.6 % respectively in the previous quarter.

INDUSTRIAL PRODUCTION

In February 2021, seasonally adjusted industrial production decreased by 1.0 % in the euro area and by 0.9 % the EU, compared with January 2021, according to estimates from Eurostat. In January 2021, industrial production increase by 0.8 % in both EU and euro area as compared to December 2021. In February 2021 compared with February 2020, industrial production decreased by 1.6 % in the euro area and by 1.1 % in the EU.

PRODUCTION IN CONSTRUCTION

In February 2021 compared with January 2021, seasonally adjusted production in the construction sector decreased by 2.1 % in the euro area and by 1.6 % in the EU, according to estimates from Eurostat. In January 2021 compared to the previous month, production in construction increased by 1.0 % in the EU and by 0.8 % in the euro area. In February 2021 compared with February 2020, production in construction decreased by 5.8 % in euro area and by 5.4 % in EU.

RETAIL TRADE

In March 2021 compared with February 2021, the seasonally adjusted volume of retail trade increased by 2.7 % in the euro area and by 2.6 % in the EU, according to estimates from Eurostat. In February 2021, the retail trade volume increased by 4.2 % in the euro area and by 3.8 % in the EU compared to the previous month. In February 2021 compared with February 2020, the calendar adjusted retail sales index increased by 12.0 % in the euro area and by 11.6 % in the EU.

INFLATION

In April 2021, the euro area annual inflation is expected to be 1.6 %, up from 1.3 % in March 2021, according to a flash estimate from Eurostat. In April 2020, the annual inflation rate was 0.3 % in the euro area.

UNEMPLOYMENT

In March 2021, the euro area seasonally adjusted unemployment rate was 8.1 %, down from 8.2 % in February 2021 and up from 7.1 % in March 2020. The EU unemployment rate was 7.3 % in March 2021, also down from 7.4 % in February 2021 and up from 6.4 % in March 2020. Eurostat estimates that 15.520 million men and women in the EU, of whom 13.166 million in the euro area, were unemployed in March 2021. Compared with February 2021, the number of persons unemployed decreased by 237 000 in the EU and by 209 000 in the euro area. Compared with March 2020, unemployment

rose by 2.019 million in the EU and by 1.614 million in the euro area.

INTEREST RATES

On 22 April 2021, the Governing Council of the European Central Bank maintained its benchmark-refinancing rate at 0.0 % since 15 March 2016. On 28 April 2021, the Federal Reserve decided to maintain the target range for the federal funds rate at 0.0 to ¼ percent. The Bank of Japan left the key interest rate unchanged at -0.1 % at its March 2021 meeting, after a decrease from 0.0 % in December 2015. The euro area's 3-month rate, Euribor, remained stable at -0.54 % in April 2021. Long-term interest rates (monthly average weighted 10-

year government bond yield) of the euro area (EA) increased to 0.03 % in March 2021, from -0.06 % in February 2021. The EU long-term interest rates increased to 0.31 % in March 2021, from 0.19 % in February 2021.

EXCHANGE RATES

The euro/US dollar exchange rate (monthly average) increased from USD 1.1899 in March 2021 to USD 1.1979 in April 2021. The euro/Japanese yen exchange rate increased from JPY 129.38 in March 2021 to JPY 130.49 in April 2021. The euro decreased against the Swiss franc from CHF 1.107 in March 2021 to CHF 1.103 in April 2021.

Growth forecasts for the euro area (1)

Growth assessment

The **€-COIN (2)** decreased from 1.36 in March 2021 to 0.92 in April 2021. Despite this slight drop, the indicator continues to signal an expansion in the underlying trend in the euro area's economy. A slightly weakening in industrial activity offset the further improvement in the expectations of households and firms.

In the extraordinary times of COVID-19 spreading over the world and having major health and economic impacts, which

cannot be tracked with the usual short-term indicators, the EUROFRAME group of research institutes has decided on 6 May to suspend the release of **Euro Growth Indicator** estimates until further notice.

For a description of the sources and methods on the indicators of growth and turning points, see the [Methodological notes](#) at the end of this section.

Figure 1: Quarter-over-quarter GDP growth indicators (Q/Q-1)

(1) Euro area growth assessment is based on the indicators' news releases and do not necessarily reflect Eurostat's views.

(2) As of January 2021, a new version of the indicator has been released, which incorporates some revisions to the database and to the sample on which the estimates are based. More information has been included regarding services – a sector whose importance has increased in terms of value added in the euro area.

Cyclical indicators for the euro area ⁽¹⁾

Growth assessment

The **Business Climate Indicator (BCI)** ⁽²⁾ for the euro area (EA) increased by 1.13 points in April 2021, following an increase of 0.31 points in March 2021.

The OECD **Composite Leading Indicators (CLIs)**, designed to anticipate turning points in economic activity relative to trend, point to a steady expansion in the OECD area as a whole and in most major economies.

Among large OECD economies outside Europe, the CLIs for the United States, Japan and Canada continue to expand at a steady pace. In Europe, the CLIs for the euro area as a whole, including Germany and Italy continue to point to a steady increase, but in the United Kingdom and France, the CLIs anticipate stable growth.

Among major emerging economies, the CLIs for Russia and for the industrial sector in China point to steady increases, as previously, whereas in India the pace of expansion of the CLI is now moderating. In Brazil, the CLI continues to point to slowing growth.

Despite the gradual lifting of COVID-19 containment measures in some countries and the progress of vaccination campaigns, persisting uncertainties might result in higher than usual fluctuations in the CLI and its components. As such, the CLIs should be interpreted with care and their magnitude should be regarded as an indication of the strength of the signal rather than as a measure of the degree of growth in economic activity.

The **DZ BANK's Euro-Indicator** recorded its fifth increase in a row in April 2021. The leading indicator for the European economy rose by 0.9 % in April 2021 to a new level of 102.1 points. This brings the indicator to its highest level since June 2007 — a 14-year high. The year-on-year rate of change accelerated sharply in April 2021 from 4.4 % to 10.6 %. This increase in the 12-month rate is mainly related to a base effect, as the Euro indicator plunged almost five points in April 2020 compared to March 2020 due to the onset of the COVID-19 pandemic lockdown.

Almost all components of the Euro-Indicator contributed to the increase in the indicator.

Table 2: Comparison of indicators of turning points in the business cycle for the euro area

		2020M12	2021M01	2021M02	2021M03	2021M04
OECD - CLI	Index	98.80	98.95	99.16	99.42	99.73
DZ BANK Euro-Indicator	Index	98.86	99.28	99.92	101.14	102.10
DZ BANK Euro-Indicator	Y-O-Y growth rate	0.29	0.52	1.09	4.36	10.60
DG ECFIN Business Climate Indicator	Points of std-dev.	-0.41	-0.31	-0.14	0.31	1.13

⁽¹⁾ Euro area growth assessment is based on the indicators' releases and do not necessarily reflect Eurostat's views; IFO Economic Climate Indicator has been discontinued.

⁽²⁾ The BCI press release has been discontinued.

⁽¹⁾ Due to the COVID-19 pandemic that is historically unprecedented, and the uncertainty on future economic development, the GDP and employment for Q1–Q4 2020 and Q1 2021 and the IPI estimates for M3–M12 2020 and M1–M2 2021 could be considered as values not following the previous path of the series, namely, outliers. Outliers can affect trend cycle decompositions. To reduce the impact of these recent data points in the time series, an additive outlier correction has been performed and the filters run on the corrected data. After the trend cycle decomposition, the outliers were then re-introduced in the irregular component. This is mainly visible in the decompositions obtained by the Hodrick and Prescott (HP) filter because the output cycle component includes also the irregular one (see also methodological notes). This conservative approach is justified by the still persisting high uncertainty on the future evolution of the pandemic and consequently of the economic situation.

Methodological notes (1)

Indicators of growth and turning points — sources and methods

The **EUROFRAME Euro Growth Indicator**: calculated by the OFCE (Paris) in cooperation with the EUROFRAME group, which consists of: CPB (Den Haag), DIW (Berlin), ESRI (Dublin), ETLA (Helsinki), IFW (Kiel), NIESR (London), PROMETEIA (Bologna), WIFO (Vienna), and CASE (Poland). The purpose of this leading indicator is to anticipate the development of the GDP in the euro area two quarters ahead of official statistics. The indicator considers surveys from industry, construction, and households, ISM survey of US industry, real euro/dollar exchange rate, and European stock index. The indicator is based on ordinary least squares (OLS) estimation of the GDP growth rate, and released on a monthly basis.

€-coin: a monthly 'smoothed' estimate of quarter-on-quarter GDP growth in the euro area, calculated by the Banca d'Italia. It is obtained by collecting a large set of statistics and extracting from it information relevant to forecast future GDP. It tracks GDP growth anticipating official GDP releases by several months, by giving each month an early estimate of euro area growth in terms of quarter-on-quarter changes in GDP. Moreover, it sheds light on the underlying trend by removing short-run fluctuations and measurement errors from the growth rate; in this respect it is not only a forecast, but also an indicator of the true growth momentum in the euro area.

The **OECD Composite Leading Indicator**: designed to predict cyclical turning points (peaks and troughs) in GDP as a proxy of the business growth cycle of the overall economy. It comprises a set of component series from a wide range of economic indicators.

DG ECFIN: Business Climate Indicator (monthly), designed to deliver a clear and early assessment of the cyclical situation of the euro area. The indicator uses, as input, five balances of opinions from DG ECFIN's Business and Consumer Surveys. The resulting 'common factor' may be read as a survey result: the higher the level, the healthier the cyclical situation, and a rise in the indicator points to an upswing in activity and an improvement in business climate.

DZ-Euroland-Indicator: calculated by DZ Bank (monthly), aims at predicting recessions and has also proved to reflect movements in GDP growth rate. It is built on concepts implemented by the US Conference Board for monitoring cyclical indicators. Nine series for euro area or for the main countries are selected for their leading properties, and aggregated to give a composite index which can be compared with the level of GDP in order to anticipate recessions.

(1) IFO Economic Climate Indicator has been discontinued. On 9 April IFO Institute published a new special issue on Eurozone Economic Outlook: https://www.ifo.de/sites/default/files/secure/prognosen/EZEO_20Q1_en.pdf.

Trend-cycle decomposition

A trend-cycle decomposition method aims at further decomposing seasonally adjusted data into a trend component and a cyclical component (expressed as deviation from the trend). Identifying and estimating the trend and cyclical components of key economic indicators is very relevant: the trend provides information on longer-term movements in the seasonally adjusted series over several years; the cycle is a sequence of smoother fluctuations around the longer-term trend in part characterised by alternating periods of expansion and contraction.

There are many alternative methods to identify and estimate the trend and cycle components in time series. The estimates for three indicators — GDP, industrial production, and employment — are produced using three different filters:

Hodrick-Prescott (HP): a filter widely used in macroeconomics to fit a smooth curve through a set of points.

Christiano-Fitzgerald (CF): a well-known approximation to an ideal band pass filter, estimated non-parametrically.

Unobserved Components (UC): a parametric approach which involves estimating a statistical model and decomposing the series into components, including the trend and cycle.

Since seasonally adjusted data also include an irregular component, it is important how this component is treated in trend-cycle decomposition methods. So-called de-trending methods, such as the HP filter, decompose the series as a sum of a trend and a cyclical component. In this case, the cycle also contains the irregular component. Cycle extraction methods, such as the CF filter, first extract the cyclical component within a pre-specified band of frequencies and then estimate the trend as the difference between the original series and the cycle component. In this case, the trend also contains the irregular component. Finally, the UC model estimates simultaneously the trend, the cycle and the irregular components, under some hypotheses, so that neither the trend nor the cycle contain the irregular component. A good understanding of the various components stemming from trend-cycle decomposition methods is essential, especially in the presence of outliers at the end of the time series. In fact, different types of outliers affect different components: additive outliers typically affect the irregular component so that they will be visible in the HP filtered cycle and in the CF filtered trend and not in the trend or cycle components obtained by the UC approach. Finally, other types of outliers such as a level shift or a ramp effect will typically impact the trend. A ramp effect is a smooth, linear transition between

two time points unlike the abrupt change associated with a level shift. Understanding the nature of an outlier can require several times series points.

Period comparisons

Q/Q-1: quarter-on-quarter (q-o-q) growth/change in percentage for quarterly indicators where the difference between the value of a given quarter (Q) and that of the previous quarter (Q-1) is divided by the value of the previous quarter (Q-1) and multiplied by 100.

Q/Q-4: year-on-year (y-o-y) growth/change in percentage for quarterly indicators where the difference between the value of a given quarter (Q) and that of the same quarter of the previous year (Q-4) is divided by the value of the same quarter of the previous year (Q-4) and multiplied by 100.

M/M-1: a month-on-month (m-o-m) growth/change in percentage for monthly indicators where the difference between the value of a given month (M) and that of the previous month (M-1) is divided by the value of the previous month (M-1) and multiplied by 100.

M/M-12: a year-on-year (y-o-y) growth/change in percentage for monthly indicators where the difference between the value of a given month (M) and that of the same month of the previous year (M-12) is divided by the value of the same month of the previous year (M-12) and multiplied by 100.

Geographical information

The **euro area** consists of Belgium, Germany, Estonia, Ireland, Greece, Spain, France, Italy, Cyprus, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Austria, Portugal, Slovenia, Slovakia and Finland.

The **European Union** (EU) includes Belgium, Bulgaria, Czechia, Denmark, Germany, Estonia, Ireland, Greece, Spain, France, Croatia, Italy, Cyprus, Latvia, Lithuania, Luxembourg, Hungary, Malta, the Netherlands, Austria, Poland, Portugal, Romania, Slovenia, Slovakia, Finland and Sweden.

In the case of inflation (HICP), the euro area and the EU data refer to the respective country compositions of the euro area and the EU at a specific point in time.

In the case of 3-month interest rate and long-term government bond yields, the euro area data refer to the country composition of the euro area at a specific point in time.

(*) Indicators are selected from the PEEIs list (COM/2002/661), complemented by certain Monetary and financial indicators as well as the Economic sentiment indicator. For a complete list of data sources per indicator, please refer to the appendix.

(**) Due to the fact that the Luxembourgish Government does not have outstanding long-term debt securities with a residual maturity of close to ten years, the indicator is based on a basket of long-term bonds. This basket has an average residual maturity of close to ten years. The bonds are issued by a private credit institution and the indicator is thus not fully harmonised (source ECB).

Where nothing else has been indicated, data are neither seasonally, nor calendar adjusted.

Getting in touch with the EU

In person

All over the European Union there are hundreds of Europe Direct Information Centres. You can find the address of the centre nearest you at: https://europa.eu/european-union/contact_en

On the phone or by email

Europe Direct is a service that answers your questions about the European Union. You can contact this service

- by freephone: 00 800 6 7 8 9 10 11 (certain operators may charge for these calls),
- at the following standard number: +32 22999696 or
- by email via: https://europa.eu/european-union/contact_en

Finding information about the EU

Online

Information about the European Union in all the official languages of the EU is available on the https://europa.eu/european-union/index_en

EU publications

You can download or order free and priced EU publications at: <https://op.europa.eu/en/>. Multiple copies of free publications may be obtained by contacting Europe Direct or your local information centre (see https://europa.eu/european-union/contact_en).

EU law and related documents

For access to legal information from the EU, including all EU law since 1951 in all the official language versions, go to EUR-Lex at: <https://eur-lex.europa.eu>

Open data from the EU

The EU Open Data Portal (<https://data.europa.eu/euodp/en/home>) provides access to datasets from the EU. Data can be downloaded and reused for free, both for commercial and non-commercial purposes.

Eurostatistics

DATA FOR SHORT-TERM ECONOMIC ANALYSIS

Eurostatistics — Data for short-term economic analysis — shows the evolution of the economic activity in the European Union, euro area and Member States. This monthly review gives a synthetic picture of the macroeconomic situation in the recent past. It is based on Principal European Economic Indicators (PEEIs), complemented by some business cycle indicators.
