European Union and euro area: GDP continues to expand at the same rate in Q3 2021, while economic sentiment eases in November 2021

In the **euro area**, GDP increased quarter-on-quarter by 2.2 % in Q3 2021, according to an estimate published by Eurostat. This follows a growth rate of 2.2 % in Q2. In year-on-year terms, GDP increased by 3.9 % in Q3 2021.

In October 2021, the volume of retail trade rose month-on-month by 0.2 % and year-on-year by 1.4 % in the euro area. This follows a month-on-month decrease of 0.4 % and a year-on-year increase of 2.6 % observed in September.

The unemployment rate in the euro area was 7.3 % in October 2021, down from 7.4 % in September and below its pre-pandemic level of 7.4 % in February 2020.

The euro area annual inflation rate (HICP) is expected to be 4.9 % in November 2021, up from 4.1 % in October, according to a flash estimate from Eurostat. Looking at the main components of euro area inflation, 'energy' is expected to have the highest annual rate (27.4 %, up from 23.7 % in October), followed by 'services' (2.7 %, up from 2.1 % in October), non-energy industrial goods (2.4 %, up from 2.0 % in October) and 'food, alcohol & tobacco' (2.2 %, up from 1.9 % in October).

DG ECFIN's Economic Sentiment Indicator (ESI) for the euro area eased in November 2021, decreasing month-on-month by 1.1 points to 117.5. The ESI was 13.5 points above its pre-pandemic level in February 2020. In November 2021, the decrease was driven by a marked decline in consumer confidence, while confidence remained broadly stable in industry and services and improved in construction and retail trade.

In November 2021, DG ECFIN's Employment Expectations Indicator (EEI) for the euro area increased month-on-month by 1.7 points to 115.6. The increase of the EEI was driven by improved employment plans in services, retail trade and

construction, while employment expectations remained broadly stable in industry.

In the **European Union** (EU), GDP increased quarter-on-quarter by 2.1 % in Q3 2021 after a growth rate of 2.1 % in Q2 2021. In year-on-year terms, GDP increased by 4.1 % in Q3 2021.

In October 2021, the volume of retail trade rose month-on-month by 0.3 % and year-on-year by 2.3 % in the EU. The EU unemployment rate was 6.7 % in October 2021, stable compared to September, slightly above its pre-pandemic value of 6.6 % in February 2020.

The ESI for the EU decreased by 1.1 points to 116.5 in November 2021, 12.6 points above its pre-pandemic level in February 2020.

The ESI for the EU increased by 1.0 points to 117.6 in October 2021, 13.7 points above its pre-pandemic level in February 2020

Situation in EU Member States: GDP increases in Q3 2021, and economic sentiment remains high in most Member States in November 2021

In Q3 2021, GDP expanded quarter-on-quarter in all Member States for which data are available, with the exception of Lithuania having a zero growth rate. Austria (3.8 %), France (3.0 %) and Portugal (2.9 %) recorded the highest growth rates and Latvia (0.6 %), Romania (0.4 %) and Slovakia (0.4 %) the lowest ones. The year-on-year GDP growth rates were positive for all Member States having available data. The highest year-on-year increases were recorded in Croatia (15.5 %), Greece (13.4 %) and Ireland (11.4 %) and the lowest ones in Spain (2.7 %), Germany (2.6 %) and Slovenia (1.3 %).

In November 2021, the highest estimated annual inflation rates (HICP) among the euro area Member States were recorded in Lithuania (9.3 %), Estonia (8.4 %) and Latvia (7.4 %), and the lowest ones in Finland and France (both 3.4 %), Portugal (2.7 %) and Malta (2.3 %).

In November 2021, the ESI increased in 14 Member States while it decreased in 13. In 17 Member States, the levels were higher than their pre-pandemic levels in February 2020. The ESI ranged from 91.6 in Czechia, 94.8 in Slovakia and 95.7 in Bulgaria to 118.0 in Austria, 119.5 in Italy and 121.8 in Sweden.

The situation in the four largest EU economies:

In **Germany**, GDP increased quarter-on-quarter by 1.7 % in Q3 2021 after an improvement of 2.0 % in Q2. In year-on-year terms, GDP increased by 2.6 % in Q3 2021. The annual inflation rate was 6.0 % in November 2021, up from 4.6 % in October. The unemployment rate was 3.3 % in October 2021, stable compared to September and below its pre-pandemic value of 3.5 % in February 2020. The ESI decreased month-on-month by 1.7 points to 115.8 in November 2021, following a decrease of 0.5 points in the previous month. In November 2021, the ESI was 13.6 points above its pre-pandemic level in February 2020.

In **France**, GDP increased quarter-on-quarter by 3.0 % in Q3 2021 after an improvement of 1.3 % in Q2. In year-on-year terms, GDP increased by 3.3 % in Q3 2021. The annual inflation rate was 3.4 % in November 2021, up from 3.2 % in October. The unemployment rate was 7.6 % in October 2021, down from 7.7 % in September and slightly below its pre-pandemic value of 7.7 % in February 2020. The ESI increased month-on-month by 3.0 points to 116.1 in November 2021, following an increase of 1.9 points in the previous month. In November 2021, the ESI was 10.3 points above its pre-pandemic level in February 2020.

In **Italy**, GDP increased quarter-on-quarter by 2.6 % in Q3 2021 after an improvement of 2.7 % in Q2. In year-on-year terms, GDP increased by 3.9 % in Q3 2021. The annual inflation rate was 4.0 % in November 2021, up from 3.2 % in October. The unemployment rate was 9.4 % in October 2021, up from 9.2 % in September but below its pre-pandemic value of 9.7 % in February 2020. The ESI increased month-on-month by 0.9 points to 119.5 in November 2021, following an increase of 1.8 points in the previous month. In November 2021, the ESI was 17.4 points above its pre-pandemic level in February 2020.

In **Spain**, GDP increased quarter-on-quarter by 2.0 % in Q3 2021 after an improvement of 1.1 % in Q2. In year-on-year terms, GDP rose by 2.7 % in Q3 2021. The annual inflation rate was 5.6 % in November 2021, up from 5.4 % in October. The unemployment rate was 14.5 % in October 2021, down

slightly from 14.6 % in September but above its pre-pandemic value of 13.7 % in February 2020. The ESI decreased month-on-month by 2.6 points to 109.3 in November 2021, after an increase of 2.5 points in the previous month. In November 2021, the ESI was 6.1 points above its pre-pandemic level in February 2020.

International context ⁽¹⁾: GDP growth slows down in the United States and China, rises in India and declines in Brazil in Q3 2021

In the **United States**, GDP increased quarter-on-quarter by 0.5 % in Q3 2021 after a growth rate of 1.6 % in Q2. In year-on-year terms, GDP increased by 4.9 % in Q3 2021. The annual inflation rate was 7.3 % in October 2021, up from 6.2 % in September. The unemployment rate was 4.6 % in October 2021, down from 4.8 % in September.

As regards the BRICS countries (Brazil, Russia, India, China and South Africa), **China** recorded a quarter-on-quarter GDP growth rate of 0.2 % in Q3 2021 after an increase of 1.2 % in Q2. In year-on-year terms, GDP increased by 4.9 % in Q3 2021. The annual inflation rate was 1.5 % in October 2021, up from 0.7 % in September.

In **India**, GDP rose sharply quarter-on-quarter by 12.7 % in Q3 2021, following a drop of 11.6 % in Q2. In year-on-year terms, GDP rose by 8.5 % in Q3 2021. The annual inflation rate was 4.5 % in October 2021, up from 4.4 % in September.

In **Brazil**, GDP decreased quarter-on-quarter by 0.1 % in Q3 2021, following a decline of 0.4 % in Q2. In year-on-year terms, GDP rose by 4.0 % in Q3 2021. The annual inflation rate was 10.7 % in October 2021, up from 10.2 % in September.

In **Russia**, GDP increased quarter-on-quarter by 3.5 % in Q2 2021 after a growth rate of 1.0 % in Q1. In year-on-year terms, GDP increased by 8.1 % in Q2 2021. The annual inflation rate was 8.1 % in October 2021, up from 7.4 % in September.

In **South Africa**, GDP increased quarter-on-quarter by 1.2 % in Q2 2021 after a growth rate of 1.0 % in Q1. In year-on-year terms, GDP rose by 19.4 % in Q2 2021. The annual inflation rate was 5.1 % in October 2021, stable compared to September.

⁽¹⁾) GDP data for Q3 2021 are not available for Russia and South Africa.

1

Summary analysis

Latest macroeconomic developments

Data collection for a large number of indicators published in this edition of Eurostatistics has been affected by the COVID-19 crisis. For most of the concerned indicators, data are based on fewer statistical observations than usual. More information on the compilation are available in the news releases of each indicator.

Eurostat has also published a wide range of statistics related to COVID-19 in a dedicated section of its website: [COVID-19: Statistics serving Europe](#), together with practical guidance for official statisticians on the issues triggered by COVID-19.

In December 2020, Eurostat launched the [European Statistical Recovery Dashboard](#) providing a monthly updated overview of the economic and social developments during the recovery from the pandemic crisis in the Member States and EU as a whole.

EVOLUTION OF GDP

Seasonally adjusted GDP increased by 2.2 % in the euro area and by 2.1 % in the EU during the third quarter of 2021, compared with the previous quarter, according to preliminary flash estimates published by Eurostat. In the second quarter of 2021, GDP had grown by 2.2 % in the euro area and by 2.1 % in the EU. Compared with the same quarter of the previous year, seasonally adjusted GDP increased by 3.9 % in the euro area and by 4.1 % in the EU in the third quarter of 2021, after +14.4 % in the euro area and +13.8 % in the EU in the second quarter of 2021.

INDUSTRIAL PRODUCTION

In September 2021, seasonally adjusted industrial production fell by 0.2 % in the euro area and by 0.5 % in the EU, compared with August 2021, according to estimates from Eurostat. In August 2021, industrial production fell by 1.7 % in the euro area and by 1.5 % in the EU as compared to July 2021.

In September 2021 compared with September 2020, industrial production increased by 5.2 % in the euro area and by 5.0 % in the EU.

PRODUCTION IN CONSTRUCTION

In September 2021 compared with August 2021, seasonally adjusted production in the construction sector increased by 0.9 % in the euro area and by 1.2 % in the EU, according to estimates from Eurostat. In August 2021 compared to the previous month, production in construction fell by 1.4 % in the euro area and by 1.8 % in the EU. In September 2021 compared with September 2020, production in construction increased by 1.5 % in the euro area and by 1.8 % in the EU.

RETAIL TRADE

In October 2021 compared with September 2021, the seasonally adjusted volume of retail trade increased by 0.2 % in the euro area and by 0.3 % in the EU, according to estimates from Eurostat. In September 2021, the retail trade volume decreased by 0.4 % in the euro area and by 0.3 % in the EU compared to the previous month. In October 2021 compared with October 2020, the calendar adjusted retail sales index increased by 1.4 % in the euro area and by 2.3 % in the EU.

INFLATION

In November 2021, the euro area annual inflation is expected to be 4.9 %, up from 4.1 % in October 2021, according to a flash estimate from Eurostat. In November 2020, the annual inflation rate was down to -0.3 % in the euro area.

UNEMPLOYMENT

In October 2021, the euro area seasonally adjusted unemployment rate was 7.3 %, down from 7.4 % in September 2021 and from 8.4 % in October 2020. The EU unemployment rate was 6.7 % in October 2021, stable compared with September 2021 and down from 7.5 % in October 2020. These figures are published by Eurostat.

Eurostat estimates that 14.312 million men and women in the EU, of whom 12.045 million in the euro area, were unemployed in October 2021. Compared with September 2021, the number

of persons unemployed decreased by 77 000 in the EU and by 64 000 in the euro area. Compared with October 2020, unemployment decreased by 1.650 million in the EU and by 1.564 million in the euro area.

INTEREST RATES

On 28 October 2021, the Governing Council of the European Central Bank maintained its benchmark-refinancing rate at 0.0 % since 15 March 2016. On 3 November 2021, the Federal Reserve decided to maintain the target range for the federal funds rate at 0.0 to $\frac{1}{4}$ percent. The Bank of Japan left the key interest rate unchanged at -0.1 % at its October 2021 meeting, after a decrease from 0.0 % in December 2015. The euro area's 3-month rate, Euribor, decreased at -0.57 % in November 2021 from -0.55 % in October 2021. Long-term interest rates

(monthly average weighted 10-year government bond yield) of the euro area (EA) increased to 0.23 % in October 2021, from 0.07 % in September 2021. The EU long-term interest rates increased to 0.62 % in October 2021, from 0.39 % in September 2021.

EXCHANGE RATES

The euro/US dollar exchange rate (monthly average) decreased to USD 1.1414 in November 2021 from USD 1.1601 in October 2021. The euro/Japanese yen exchange rate decreased from JPY 131.210 in October 2021 to JPY 130.120 in November 2021. The euro decreased against the Swiss franc from CHF 1.0708 in October 2021 to CHF 1.0522 in November 2021.

Growth forecasts for the euro area (¹)

Growth assessment

The **€-COIN** (²) indicator fell from 0.71 in October to 0.16 in November, close to the levels recorded in the final part of 2020, pointing to a significant slowdown in economic activity.

In the extraordinary times of COVID-19 spreading over the world and having major health and economic impacts, which cannot be tracked with usual short-term indicators,

the EUROFRAME group of research institutes has decided on 6 May 2020 to suspend the release of **Euro Growth Indicator** estimates until further notice.

For a description of the sources and methods on the indicators of growth and turning points, see the [Methodological notes](#) at the end of this section.

Figure 1: Quarter-over-quarter GDP growth indicators (Q/Q-1)

(¹) Euro area growth assessment is based on the indicators' news releases and do not necessarily reflect Eurostat's views.

(²) As of January 2021, a new version of the indicator has been released, which incorporates some revisions to the database and to the sample on which the estimates are based. More information has been included regarding services – a sector whose importance has increased in terms of value added in the euro area.

Cyclical indicators for the euro area (¹)

Growth assessment

The **Business Climate Indicator (BCI) (²)** for the euro area (EA) increased by 1.80 points in November 2021, following an increase by 1.75 points in October 2021.

The OECD **Composite Leading Indicators (CLIs)**, designed to anticipate turning points in economic activity relative to trend, continue to suggest that economic growth in the OECD area as a whole may reach a peak in the coming months.

The latest CLIs reaffirm last month's assessment which showed signs of a possible upcoming peak in the growth of economic activity in the United States, Japan, Germany and the United Kingdom. Similar signals have now emerged in Canada and the euro area as a whole, including Italy. However, in France, the CLI is pointing to a continuation in growth, albeit at a moderating pace.

Among major emerging-market economies, the CLIs continue to anticipate growth losing momentum in China (industrial sector). In India, the CLI indicates stable growth while in Brazil, the outlook continues to deteriorate with the CLI now contracting to below trend levels. By contrast, the CLI for Russia continues to point to a steady increase in growth above long-term trends.

The OECD composite leading indicators, which include order books, building permits, confidence indicators, long-

term interest rates, new car registrations and many more, are cyclical indicators designed to anticipate fluctuations in economic activity over the next six to nine months. They paint a broad picture of economic activity based on a large amount of recent forward-looking data.

Persisting uncertainties stemming largely from recent developments in the ongoing COVID-19 pandemic may result in higher than usual fluctuations in the CLI and its components. As such, the CLIs should be interpreted with care and their magnitude should be regarded as an indication of the strength of the signal rather than a precise measure of anticipated growth in economic activity.

The **DZ BANK's Euro-Indicator** stands at 101.9 points. In November, the indicator improved slightly compared to the previous month, rising by 0.1 %. Relative to the previous year's level, the gap is now 3.96 %, which is slightly more than the 3.57 % recorded in October 2021.

DZ BANK's Euro Indicator has been characterised by repeated ups and downs since this spring. The economic picture in the Eurozone is currently quite mixed, and neither a radical recovery nor a significant economic slump is to be expected in the coming months.

(¹) Euro area growth assessment is based on the indicators' releases and do not necessarily reflect Eurostat's views; IFO Economic Climate Indicator has been discontinued.
(²) The BCI press release has been discontinued.

Notes:

European Commission: The EU economy is rebounding from the pandemic recession faster than expected. Households responded to the improving epidemiological situation and the gradual relaxation of containment measures with a spending spree that propelled EU private consumption growth. Following several years of low inflation, the strong resumption of economic activity has been accompanied by a pick-up in inflationary pressures, particularly in energy prices and wholesale prices. The exceptionally brisk rebound in global demand in the second half of 2020, met a supply weakened by the restrictions put in place to contain the spread of the pandemic. This affected several key industries, including the global logistic sector, the production of raw materials and microprocessors. The macroeconomic and budgetary projections in the forecast include the impact of the implementation of the Recovery and Resilience Facility (RRF). For further information see: https://ec.europa.eu/info/business-economy-euro/economic-performance-and-forecasts/economic-forecasts/autumn-2021-economic-forecast-recovery-expansion-amid-headwinds_en

IMF: The global economic recovery is continuing, even as the pandemic resurges. The fault lines opened up by COVID-19 are looking more persistent — near-term divergences are expected to leave lasting imprints on medium-term performance. Vaccine access and early policy support are the principal drivers of the gaps. In most cases, rising inflation reflects pandemic-related supply-demand mismatches and higher commodity prices compared to their low base from a year ago. National authorities' established policies are assumed to be maintained. For further information see: <https://www.imf.org/en/Publications/WEO/Issues/2021/10/12/world-economic-outlook-october-2021>

OECD: The euro area aggregate includes OECD member countries (Cyprus and Malta are excluded from the EA aggregate as they are not OECD member countries). The global economy continues to recover, along with trade, employment and incomes. But the revival is unbalanced, with countries, businesses and people facing very different economic realities. Consumer price inflation is projected to peak by the end of 2021, and then moderate towards levels consistent with underlying pressures from slowly rising labour costs and declining spare capacity around the world. Significant risks remain around these projections. New, more transmissible COVID-19 variants of concern may continue to appear, especially if the speed of vaccine deployment and the effectiveness of existing vaccines wane, hitting growth prospects. For further information see: <https://www.oecd.org/economic-outlook/>

ECB: Cut-off date: The June and December projections only include information on the outlook for individual euro area countries. Compared with the June 2021 projections, the technical assumptions include lower interest rates, higher oil prices and a depreciation of the euro. The technical assumptions about interest rates and commodity prices are based on market expectations with a cut-off date of 16 August 2021. Short-term interest rates refer to the three-month EURIBOR, with market expectations derived from futures rates. HICP inflation is projected to continue to rise until the end of this year, to decline in the first half of 2022 and to gradually strengthen thereafter. Bilateral exchange rates are assumed to remain unchanged over the projection horizon at the average levels. Business investment is expected to remain resilient and to recover substantially over the projection horizon. As the key driver of the recovery, private consumption is expected to grow strongly over the projection horizon, exceeding its pre-crisis level by the first quarter of 2022. For further information see: <https://www.ecb.europa.eu/pub/projections/html/index.en.html>

(1) Due to the COVID-19 pandemic that is historically unprecedented, and the uncertainty on future economic development, the GDP and employment for Q1–Q4 2020 and Q1 and Q3 2021 and the IPI estimates for M3–M12 2020 and M1–M9 2021 could be considered as values not following the previous path of the series, namely, outliers. Outliers can affect trend cycle decompositions. To reduce the impact of these recent data points in the time series, an additive outlier correction has been performed and the filters run on the corrected data. After the trend cycle decomposition, the outliers were then re-introduced in the irregular component. This is mainly visible in the decompositions obtained by the Hodrick and Prescott (HP) filter because the output cycle component includes also the irregular one (see also methodological notes). This conservative approach is justified by the still persisting high uncertainty on the future evolution of the pandemic and consequently on the economic situation.

Methodological notes (1)

Indicators of growth and turning points — sources and methods

The **EUROFRAME Euro Growth Indicator**: calculated by the OFCE (Paris) in cooperation with the EUROFRAME group, which consists of: CPB (Den Haag), DIW (Berlin), ESRI (Dublin), ETLA (Helsinki), IFW (Kiel), NIESR (London), PROMETEIA (Bologna), WIFO (Vienna), and CASE (Poland). The purpose of this leading indicator is to anticipate the development of the GDP in the euro area two quarters ahead of official statistics. The indicator considers surveys from industry, construction, and households, ISM survey of US industry, real euro/dollar exchange rate, and European stock index. The indicator is based on ordinary least squares (OLS) estimation of the GDP growth rate, and released on a monthly basis.

€-coin: a monthly 'smoothed' estimate of quarter-on-quarter GDP growth in the euro area, calculated by the Banca d'Italia. It is obtained by collecting a large set of statistics and extracting from it information relevant to forecast future GDP. It tracks GDP growth anticipating official GDP releases by several months, by giving each month an early estimate of euro area growth in terms of quarter-on-quarter changes in GDP. Moreover, it sheds light on the underlying trend by removing short-run fluctuations and measurement errors from the growth rate; in this respect it is not only a forecast, but also an indicator of the true growth momentum in the euro area.

The **OECD Composite Leading Indicator**: designed to predict cyclical turning points (peaks and troughs) in GDP as a proxy of the business growth cycle of the overall economy. It comprises a set of component series from a wide range of economic indicators.

DG ECFIN: Business Climate Indicator (monthly), designed to deliver a clear and early assessment of the cyclical situation of the euro area. The indicator uses, as input, five balances of opinions from DG ECFIN's Business and Consumer Surveys. The resulting 'common factor' may be read as a survey result: the higher the level, the healthier the cyclical situation, and a rise in the indicator points to an upswing in activity and an improvement in business climate.

DZ-Euroland-Indicator: calculated by DZ Bank (monthly), aims at predicting recessions and has also proved to reflect movements in GDP growth rate. It is built on concepts implemented by the US Conference Board for monitoring cyclical indicators. Nine series for euro area or for the main countries are selected for their leading properties, and aggregated to give a composite index which can be compared with the level of GDP in order to anticipate recessions.

(¹) IFO Economic Climate Indicator has been discontinued. On 9 April IFO Institute published a new special issue on Eurozone Economic Outlook:
https://www.ifo.de/sites/default/files/secure/prognosen/EZEO_20Q1_en.pdf

Trend-cycle decomposition

A trend-cycle decomposition method aims at further decomposing seasonally adjusted data into a trend component and a cyclical component (expressed as deviation from the trend). Identifying and estimating the trend and cyclical components of key economic indicators is very relevant: the trend provides information on longer-term movements in the seasonally adjusted series over several years; the cycle is a sequence of smoother fluctuations around the longer-term trend in part characterised by alternating periods of expansion and contraction.

There are many alternative methods to identify and estimate the trend and cycle components in time series. The estimates for three indicators — GDP, industrial production, and employment — are produced using three different filters:

Hodrick-Prescott (HP): a filter widely used in macroeconomics to fit a smooth curve through a set of points.

Christiano-Fitzgerald (CF): a well-known approximation to an ideal band pass filter, estimated non-parametrically.

Unobserved Components (UC): a parametric approach which involves estimating a statistical model and decomposing the series into components, including the trend and cycle.

Since seasonally adjusted data also include an irregular component, it is important how this component is treated in trend-cycle decomposition methods. So-called de-trending methods, such as the HP filter, decompose the series as a sum of a trend and a cyclical component. In this case, the cycle also contains the irregular component. Cycle extraction methods, such as the CF filter, first extract the cyclical component within a pre-specified band of frequencies and then estimate the trend as the difference between the original series and the cycle component. In this case, the trend also contains the irregular component. Finally, the UC model estimates simultaneously the trend, the cycle and the irregular components, under some hypotheses, so that neither the trend nor the cycle contain the irregular component. A good understanding of the various components stemming from trend-cycle decomposition methods is essential, especially in the presence of outliers at the end of the time series. In fact, different types of outliers affect different components: additive outliers typically affect the irregular component so that they will be visible in the HP filtered cycle and in the CF filtered trend and not in the trend or cycle components obtained by the UC approach. Finally, other types of outliers such as a level shift or a ramp effect will typically impact the trend. A ramp effect is a smooth, linear transition between

two time points unlike the abrupt change associated with a level shift. Understanding the nature of an outlier can require several times series points.

Period comparisons

Q/Q-1: quarter-on-quarter (q-o-q) growth/change in percentage for quarterly indicators where the difference between the value of a given quarter (Q) and that of the previous quarter (Q-1) is divided by the value of the previous quarter (Q-1) and multiplied by 100.

Q/Q-4: year-on-year (y-o-y) growth/change in percentage for quarterly indicators where the difference between the value of a given quarter (Q) and that of the same quarter of the previous year (Q-4) is divided by the value of the same quarter of the previous year (Q-4) and multiplied by 100.

M/M-1: a month-on-month (m-o-m) growth/change in percentage for monthly indicators where the difference between the value of a given month (M) and that of the previous month (M-1) is divided by the value of the previous month (M-1) and multiplied by 100.

M/M-12: a year-on-year (y-o-y) growth/change in percentage for monthly indicators where the difference between the value of a given month (M) and that of the same month of the previous year (M-12) is divided by the value of the same month of the previous year (M-12) and multiplied by 100.

Geographical information

The **euro area** consists of Belgium, Germany, Estonia, Ireland, Greece, Spain, France, Italy, Cyprus, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Austria, Portugal, Slovenia, Slovakia and Finland.

The **European Union** (EU) includes Belgium, Bulgaria, Czechia, Denmark, Germany, Estonia, Ireland, Greece, Spain, France, Croatia, Italy, Cyprus, Latvia, Lithuania, Luxembourg, Hungary, Malta, the Netherlands, Austria, Poland, Portugal, Romania, Slovenia, Slovakia, Finland and Sweden.

In the case of inflation (HICP), the euro area and the EU data refer to the respective country compositions of the euro area and the EU at a specific point in time.

In the case of 3-month interest rate and long-term government bond yields, the euro area data refer to the country composition of the euro area at a specific point in time.

(*) Indicators are selected from the PEEIs list (COM/2002/661), complemented by certain Monetary and financial indicators as well as the Economic sentiment indicator. For a complete list of data sources per indicator, please refer to the appendix.

(**) Due to the fact that the Luxembourgish Government does not have outstanding long-term debt securities with a residual maturity of close to ten years, the indicator is based on a basket of long-term bonds. This basket has an average residual maturity of close to ten years. The bonds are issued by a private credit institution and the indicator is thus not fully harmonised (source ECB).

Where nothing else has been indicated, data are neither seasonally, nor calendar adjusted.

Getting in touch with the EU

In person

All over the European Union there are hundreds of Europe Direct Information Centres. You can find the address of the centre nearest you at: https://europa.eu/european-union/contact_en

On the phone or by email

Europe Direct is a service that answers your questions about the European Union. You can contact this service

- by freephone: 00 800 6 7 8 9 10 11 (certain operators may charge for these calls),
- at the following standard number: +32 22999696 or
- by email via: https://europa.eu/european-union/contact_en

Finding information about the EU

Online

Information about the European Union in all the official languages of the EU is available on the https://europa.eu/european-union/index_en

EU publications

You can download or order free and priced EU publications at:

<https://op.europa.eu/en/>. Multiple copies of free publications may be obtained by contacting Europe Direct or your local information centre (see https://europa.eu/european-union/contact_en).

EU law and related documents

For access to legal information from the EU, including all EU law since 1951 in all the official language versions, go to EUR-Lex at: <https://eur-lex.europa.eu>

Open data from the EU

The EU Open Data Portal (<https://data.europa.eu/euodp/en/home>) provides access to datasets from the EU. Data can be downloaded and reused for free, both for commercial and non-commercial purposes.

Eurostatistics

DATA FOR SHORT-TERM ECONOMIC ANALYSIS

Eurostatistics — Data for short-term economic analysis — shows the evolution of the economic activity in the European Union, euro area and Member States. This monthly review gives a synthetic picture of the macroeconomic situation in the recent past. It is based on Principal European Economic Indicators (PEEIs), complemented by some business cycle indicators.
