## PREFACE

The European Union continued to be the most important global player in international trade in services in 2005. The EU25 increased its external surplus from €47.6bn in 2004 to €56.9bn in 2005.

- Did you know that service trade continued to exceed service output growth?
- Did you know that the EU was the most important single service trader in the world?
- Did you know that the USA was the EU's main trading partner?
- Did you know that EU recorded surplus in transportation and other services and a deficit in travel?
- Did you know that trade between Member States exceeded Extra-EU trade?
- Did you know that the USA had a steady surplus in external trade in services, while Japan a persistent deficit?
- Did you know that in 2005 the EU had the highest surplus in international trade in services with Switzerland and the biggest deficit with Turkey?

This publication provides you with the most recent and comparable statistics of the EU-15, the EU-25, Norway, the USA and Japan on annual international transactions in services.

Emphasis is put on Trade in Services and on the diversity of trading partners. Therefore, these statistics can be used to monitor the external commercial performance of different economies and thus assist trade negotiations in the context of the General Agreement on Trade in Services (GATS).

In the first part of this publication you can find an analysis of 2005 main features through comments, graphs and tables. The second and third parts provide a detailed review of 2005, displaying a complete set of tables for the EU, Norway, the USA and Japan. Finally, the fourth part gives a short description of the methodological framework.

Your needs as a user are our main concern. We can only improve with your help, so please feel free to make your comments and suggestions.

# Analytical aspects

## EU INTERNATIONAL TRADE IN SERVICES IN 2005

*EU external surplus increased to €56.9bn*

The European Union continued to be the biggest global player in international trade in services (ITS). In 2005, the EU-25's international trade in services recorded a surplus of €56.9 billion, compared to 47.6bn in 2004 and 38.5bn in 2003. The USA remained the EU's main trading partner. The development of trade with Japan continued to be rather slow. Of all the EU Member States, the UK was the biggest contributor to extra-EU transactions.

### Service trade continued to exceed service output growth

Services are increasingly important in modern economies. In 2005, their shares in EU-25 gross value added and employment were 71.9% and 67.6% respectively (Eurostat database). Recent decades have witnessed a steady rise in their importance in the EU economy.

The strong and growing role of services is not, however, reflected in international trade. On average service sectors exported less than 6% of their output, compared to an export share of close to 40% for manufacturing industry (European Commission, Quarterly Report on the Euro Area, vol. 5, No. 2). Due to their intangible nature, trade in services is inherently subject to more constraints than trade in goods. The service sectors are highly varied in their nature - some sectors being more exposed to international trade than others.

With the increasing tradability of large parts of the service economy, trade in services is now growing at similar rates to trade in goods and consequently at a pace substantially higher than that of GDP. Expansion of service trade continued to exceed service output growth by a sizeable margin.

**Chart 1: EU GDP and exports of goods and services, 1996-2005**

(At 1995 prices and exchange rates, annual percentage change)

Source: Eurostat

Since the 1990s growth in the export of goods and services has evolved in a broadly similar pattern; both growing by about 6% per year on average and services consequently retaining their roughly 20% share of overall international trade over this period. However, chart 1 shows that for the third year in a row services exports lagged behind merchandise exports.

According to figures published by the International Monetary Fund<sup>1</sup> total world international trade in services (exports + imports) in 2005 amounted to €3977.2 billion (of which intra-EU-25 trade accounted for €1057.0 billion), a 9.8% increase in value terms compared to 2004.

Looking at the different categories of services for which total world figures are available (transport<sup>2</sup>, travel<sup>3</sup> and other services<sup>4</sup>) between 2000 and 2005 the share of travel in total services decreased by 2 percentage points, down to 27% in 2005. The share of other services gained 3 percentage points (up to 49%), while the share of transport decreased from 25% to 24% in 2005 (see chart 2).

**Chart 2: Breakdown of total world trade in services, in %**

Source: IMF Balance of Payments Statistics, 2006

## The EU remained the world's largest trader in services

In 2005, the European Union remained the world's largest exporter and importer of services. The EU-25 accounted for 28.3% of global exports and 24.7% of imports<sup>5</sup>. It was followed by the USA (19.0%) and, at some considerable distance, by Japan (6.7%), China (4.4%) and Canada (3.3%).

The EU-25's share in total world trade in services decreased slightly, from 26.5% in 2004 to 25.9% in 2005. The USA and Japan also saw their shares decrease marginally - down from 19.3% to 19.0% in 2005 in the case of the USA, and from 7.1% to 6.7% for Japan. On the other hand China continued to increase its share - up from 4.1% to 4.4%.

Table 1 summarises international trade in services transactions (exports and imports) for the 15 main trading economies. In 2005, these 15 economies accounted for more than three-quarters of total world transactions in services. As the EU is treated as a single entity, intra-EU transactions are not included in this analysis.

<sup>1</sup> IMF, Balance of Payments Statistics Yearbook, 2006.

<sup>2</sup> Transportation covers all transportation services that are performed by residents of one economy for those of other and that involve the carriage of passengers, the movement of goods, rentals of carriers with crew, and related supporting and auxiliary services.

<sup>3</sup> Travel covers primarily the goods and services acquired from an economy by travellers during visits of less than one year to that economy.

<sup>4</sup> Other services comprise: communication services, construction services, insurance services, financial services, computer and information services, royalties and license fees, other business services, personal, cultural and recreational services and government services.

<sup>5</sup> Intra-EU transactions are excluded from this analysis since the EU is treated as a single entity.

This group of countries as a whole recorded a surplus of €62.7bn (up from 39.3bn in 2004). However, this total amount masks different patterns in individual countries. The EU-25 recorded a surplus of €56.9bn, compared to €47.6bn in 2004. Other countries persistently running surpluses were the USA, Switzerland, Turkey and Norway. On the other hand Japan recorded the highest deficit (€-19.3bn). Other countries with significant deficits were Russia, South Korea, Canada, China, Thailand and Mexico.

## Surplus in transportation and other services, deficit in travel

In 2005, EU-25 services trade was marked by an increase of 9.0% in exports and 7.5% in imports, compared to 2004. As a result the surplus continued to grow, reaching €56.9bn in 2005. Table 2 shows that this increased surplus was mainly due to a higher surplus in transportation (+18.4bn in 2005 compared to +14.4bn in 2004) and in “other services” (+54.3bn in 2005 compared to +47.8bn in 2004). The deficit registered for travel was slightly higher (-15.5bn compared to -14.4bn).

International receipts from transportation services rose by 11.1% in 2005, again faster than those from travel and other services, which grew in euro terms by 6.3% and 9.5% respectively. The relative strength of transportation services in a year with less dynamic merchandise trade growth seems to show stronger price increases in the transportation sector.

The surplus registered in other services in 2005 was mainly due to the surpluses recorded in other business services (+30.0bn), financial services (+20.9bn), computer and information services (+8.3bn) and construction services (+4.9bn). The largest deficit was registered in royalties and licence fees (-8.0bn).

In relative terms, financial services, construction services, other business services and royalties and licence fees expanded at double digit rates on the export side. On the import side financial services and government services experienced similar growth rates.

Chart 3 shows that in terms of total transactions (exports + imports) the shares of transportation, financial services and other business services in total EU international trade in services increased, while items such as travel and insurance services saw their shares fall.

**Chart 3: Shares in EU-25 ITS transactions with the rest of the world (in %)**

Source: Eurostat

## Trade between Member States exceeds Extra-EU trade

Almost 60% of EU trade in services was between EU Member States (Intra-EU transactions). In 2005, intra-EU exports (exports from Member States to Member States) amounted to €536.5bn, an increase of 6.5% in value terms, compared to

2004. The value of total intra-EU imports in 2005 was €520.5bn. Due to asymmetries in bilateral statistics, total intra-EU imports are not equal to total intra-EU exports. For details see *Asymmetries in EU current account data*, Eurostat Working Papers and Studies, 2006.

Extra-EU exports (exports from Member States to third countries) increased by 9.0% over the same period, reaching an amount of €406.3bn. Extra-EU imports (imports from third countries to the EU) grew by 7.5% and amounted to €349.4bn.

**Chart 4: Intra-EU and Extra-EU exports of services (in bn euro)**

Source: Eurostat

### The EU recorded surpluses with most of its partners

An analysis of the composition and trend of EU transactions with the rest of the world (Extra-EU transactions) shows that the USA continued to be the biggest trading partner for the EU. In 2005, 30.2% of total exports from the EU-25 went to and 33.2% of total imports came from the USA. However, imports from the USA increased at a faster rate than exports, leading to a reduction in the trade surplus from €10.2bn in 2004 to €6.9bn in 2005. Other important trading partners were Switzerland, Japan and Norway. These were also the countries with which the EU has considerable surpluses.

On the other hand, the highest deficits were recorded with Morocco, Thailand, Croatia, Egypt and Turkey, mainly due to deficits recorded for the item travel.

In 2005 EU exports to Russia grew at a faster rate than imports from Russia. As a result, the EU was able to increase its surplus appreciably. The value of exports to and imports from China also increased significantly. In 2005 China accounted for 2.7% of total extra-EU exports (up from 2.4% in 2004) and 2.5% of total extra-EU imports (up from 2.2% in 2004).

## UK continued to be the EU champion in trade in services

Of all the 25 Member States, the United Kingdom was the largest exporter of services in 2005. About a quarter of all EU exports to the rest of the world came from the UK. It was followed by Germany and France. Germany was the biggest importer, accounting for about 20% of total EU-25 imports. It was followed by the UK and France. The United Kingdom also registered the biggest surplus in 2005 (€ +36.9bn). The highest deficit in 2005 was recorded by Ireland, followed by Germany.

**Chart 5: Member States' (MS) share in total extra-EU ITS transactions (in %), net (in bn euro)**

Left hand scale for MS share in percentage; Right hand scale for balance in bn euro

Source: Eurostat

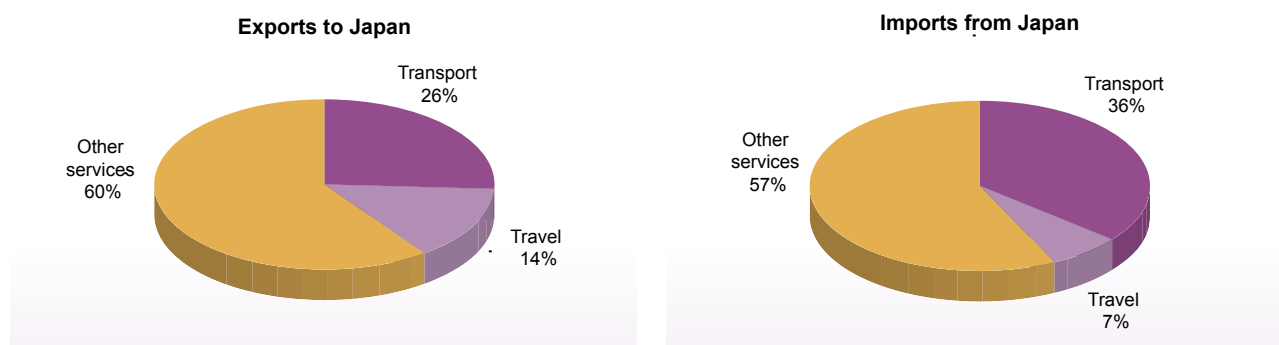

## EU trade in services with Japan rather slow

Japan is one of the most important trading partners of the European Union, ranking third in both exports and imports, after the USA and Switzerland. Table 3 shows that Japan ranks second in terms of trade balance. Japan accounts for about 5% of total EU exports and 3.3% of total EU imports. In 2005, EU25 exports in services to Japan were worth €20bn, while the imports from Japan amounted to €12bn, resulting in a surplus of €8bn. EU exports to Japan have always exceeded imports, leading to persistent surpluses.

**Chart 6: Breakdown of EU-25 exports to and imports from Japan, 2005**

Source: Eurostat

Table 4 shows that in 2005 the EU had surpluses with Japan in all service categories except for a small deficit in government services. The biggest surpluses were recorded in travel (€ +2bn), financial services (+1.9bn) and other business services (+1.7bn).

Chart 6 shows that the composition of EU exports to Japan differs from that of imports from Japan. While transportation services accounts for 26% of total exports to Japan, their share in total imports is 36%. Travel plays a much bigger role in exports to Japan (14%) than imports from Japan (7%). The shares of other services are almost the same for both exports and imports (60% in exports against 57% in imports).

**Chart 7: Evolution of EU-15 exports and imports in services, at current prices (1995=100)**

Source: Eurostat

Data on trade between EU15 and Japan (for which a much longer time series is available) show that the development of trade in services with Japan in recent years has been rather very sluggish. Over the period 1995-2005, EU-15 exports and imports of services to the rest of the world more than doubled. During that same period trade in services with Japan increased only 1.7 fold.

The United Kingdom accounted for 29.8% of all EU-25 exports to and 26.2% of EU-25 imports from Japan. It was followed by Germany and France in both exports and imports. More than 55% of total exports and imports to and from Japan involved these three countries.

# Description of the tables

## WHICH TABLE CONTAINS THE INFORMATION THAT YOU WANT?

### Figures for different international transactions in services with the main partners

From tables 3.1.1. and 3.1.2., one can obtain information

- on **exports, imports** and **net** flows, expressed in million of **EURO**;
- for the year **2005**;
- of the EU-25 (table 3.1.1) and the EU-15 (table 3.1.2);
- in relation to **World** (including intra zone flows), **rest of the world** (Extra-EU-25/Extra EU-15), **Canada, USA** and **Japan**;
- for the **main services items of the Balance of Payments** and **44 items of internationally tradable services**.

For example:

Table 3.1.1: in **2005**, the **EU-25** exported **€ 117 207 million**, and imported **€ 87 219 million** of **Other business services** from the **rest of the world** (Extra-EU-25).

### A more precise geographical detail of the main international transactions in services

Each table of this set refers to one service item.

Tables 3.2.1. to 3.2.17. report information

- on **exports, imports** and **net** flows, expressed in million of **EURO**;
- for the year **2005**;
- of **17 items of services** (total services, transportation, travel, communications services, construction...);
- of the **EU-25**, the **EU-15**, **Norway**, **USA** and **Japan** (in columns);
- in relation to **50 partner countries and zones**.

For example:

Table 3.2.1: in **2005** the **exports** of **Services** towards **China** were of **€ 11 109 million** for **EU-25** when they were of **€ 10 919 million** for **EU-15**, **€ 9 146 million** for **USA** and **€ 5 680 million** for **Japan**.

Table 3.2.14: in **2005** the **EU-25** imported **Other business services** from the **USA** for **€ 36 966 million**, from **Asia** for **€ 16 927 million** and from **Switzerland** for **€ 10 930 million**.

### Historical series since 1997

Each table of this set reports data of the European Union trade with one partner.

From tables 3.3.1. to 3.3.6., one can find information

- on **exports, imports** and **net** flows, expressed in million of **EURO** (million of **ECU** to end of 1998);
- of the **EU-15** for the period 1997-2005;
- of the **EU-25** for the period 2003-2005;
- in relation to partners **World, Intra-EU-15, Extra-EU-15, Canada, USA** and **Japan**;
- for the **main services items of the Balance of Payments** and **44 items of internationally tradable services**.

For example:

Table 3.3.3.: for **Sea transport** the **EU-15** turned from a deficit with the **rest of the world** in **1997 (ECU – 4 419 million)** to a surplus in **2005 (€ 12 566 million)**. **EU-25** recorded a surplus of **€ 11 164 million** and **€ 13 570 million** in 2004 and 2005 respectively.

Table 3.3.4.: **Insurance services** imports from **Canada** to the **EU** registered an important increase between **1997 (ECU 58 million)** compared to **2005 (€ 293 million)**.

# IV

### For the attention of the reader

*The purpose of this chapter is to provide the reader with some simplified explanations in order to understand the practical meaning of current international transactions. It does not pretend to give an exhaustive description of such transactions. For more detailed information, the reader should refer to the fifth edition of the IMF Balance of Payments Manual.*

### What are current international transactions?

From a country's point of view, a **current international transaction**, designated an export, takes place when a resident sells a real resource (goods, services and income) beyond the border and receives foreign currency as a counterpart. The opposite situation - an import - in which an input of real resource and an output of national currency occur in the country, reflects a current international transaction too.

Actually, current international transactions cover different kinds of economic flows. They comprise **international exchanges** and **current transfers**:

- **International exchanges** are the international economic flows implying a financial counterpart. All exports and imports of goods (involving changes in ownership), and of services, are international exchanges. Moreover, these also consist of international provision of labour, as it is the case of seasonal or other short-term workers (less than one year) and border workers who have centres of economic interest in their own economies; and of international remuneration on financial assets and liabilities, such as the payment of interests on money borrowed abroad and of dividends to non-resident shareholders for example.
- **Transfers** are unilateral economic flows that involve changes in ownership of goods and/or financial assets. They often refer to items that are given away rather than exchanged. There are capital transfers and current transfers; the latter only are regarded as current transactions. As an illustration, an international current transfer occurs when the government or a humanitarian organisation gives money, food or medical supplies to another country. The contributions of Member States to the budget of the European Union Institutions are considered as current transfers as well.

### What is the conceptual framework of international transactions?

A country's current international transactions comprise all the transactions between its residents and non-residents. They are recorded in the **balance of payments' current account**.

The **balance of payments** consists of two major accounts: the current account refers to real resources whereas the **capital and financial account** involves financial items.

The processing of these transactions follows the rules put forward in the **fifth edition of the International Monetary Fund Balance of Payments Manual (BPM5)**.

This publication covers only current international transactions, i.e., the current account part of the balance of payments.

## How do countries deal with current international transactions?

International transactions implicate a big variety of real resources. In order to describe all kinds of transactions, the current account is subdivided into a number of accounts. The broadest categorisation differentiates **goods, services, income** and **current transfers**. These four accounts are broken down into very detailed sub-items such as communications services which are in turn subdivided into telecommunications services and postal and courier services.

Current transactions are, in principle, recorded in **gross** flows. Each item should display a **credit** and a **debit** value in order to show exports and imports for this item. Due to problems of identifying gross flows for certain items some transactions are recorded **net**, that is as the difference between a credit and a debit. These offsetting mechanisms have the effect of underestimating credit and debit flows. Whenever they occur, these problems will be mentioned in the definitions below.

### Why are the balance of payments of all the countries in the world not fully compatible or comparable?

#### Problems of consistency, asymmetries

Although in theory, all balance of payments accounts are drawn up in accordance with an internationally accepted methodology, the balance of payments of all the countries in the World are not fully compatible or comparable. There are many reasons for this lack of comparability. The following are some examples:

- Not all countries have the same resources for recording and analysing information and because of the special features of data collection they are sometimes obliged to depart from the recommended standards (in the case of insurance, for example).
- Not all countries agree on the treatment of certain long term activities (e.g. construction services).
- The increasing speed of world-wide economic integration and proliferation of transactions between related companies makes it difficult to allocate flows between services and direct investment.

The statistical problems mentioned above generate statistical discrepancies between countries' current account balances. These discrepancies are called asymmetries. More specifically:

**Bilateral Asymmetry:** The balance declared by one compiling economy in relation to another does not correspond to the balance declared by its partner. The sum of these balances, called bilateral asymmetry should in theory be nil. However, misallocation of transactions creates an asymmetry at detailed item level that can be offset at an aggregated level. In the same way, a poor geographical breakdown creates a bilateral asymmetry which may be offset at an aggregated level of geographical breakdown.

**Asymmetry in terms of geographical aggregation:** the world total of current account credits does not tally with the world total of debits, whereas in theory they should be equal. The difference between current account credits and debits is termed world-wide asymmetry (or discordance) of current account payments.

## The current account and its subdivisions

### Goods

This is generally the biggest category of the current account. **Goods** cover **general merchandise, non monetary gold** and since the implementation of the BPM5, **goods for processing, repairs on goods** and **goods procured in ports by carriers**. The most important component, **general merchandise**, includes all movable goods whose ownership is transferred from a resident to a non-resident and vice-versa.

### Services

Trade in **services** is the second major category of the current account. If the main part of these transactions is made in a commercial purpose, the services account also allows non-commercial transactions under the item government services n.i.e.

Considering its intangible nature, international trade in services is much more difficult to record than trade in merchandise. In certain cases for example, practical difficulties for identifying gross flows may occur as many services can be paid for by means of an international offsetting mechanism. Furthermore, certain transactions between related companies are also settled by an offsetting mechanism. In both cases the identified payment corresponds to the net result of a number of transactions that are difficult to pinpoint. Such problems could involve underestimation of the flows of services.

Transactions in services are many and varied. They include amongst others: the shipping of Italian shoes by a Greek vessel; the construction of a shelter in Switzerland by a German company; the subscription to a British newspaper by a Spanish student; the purchases of souvenirs by a Japanese tourist in France; the profit on the sale of Dutch cheese in Portugal by a Belgian merchant; the payments of annual fees by a German franchisee to its American franchisor.

The item **services** is subdivided in three components: **transportation, travel** and **other services**.

### Transportation

This item covers all transportation (sea, air and other - including land, international waterway, space and pipelines) services that are performed by residents of one economy for those of another and that involve the carriage of passengers - registered in balance of payments under **passenger services**; the movement of goods - under **freight services**; and rentals (charters) of carriers with crew, and related supporting and auxiliary services - under **supporting, auxiliary and other transport services**.

### Travel

Item **travel** covers primarily the goods and services acquired from an economy by travellers during visits of less than one year in that economy. The goods and services are purchased by, or on behalf of, the traveller or provided, without a quid pro quo, for the traveller to use or give away. Excluded is the international carriage of travellers, which is covered in passenger services under transportation.

## Other services

Since services have become increasingly important in international transactions, a greater detail in the breakdown is now required. The item other services, which is largely broken down, can not be regarded as a mere residual item as it embraces a wide range of various transactions.

**Other services** reports transactions in **communications services, construction services, insurance services, financial services, computer and information services, royalties and licence fees, other business services, personal, cultural and recreational services** and **government services**.

- **Communications services** cover two main categories of international communications transactions between residents and non-residents: telecommunications services and postal and courier services. Telecommunications encompass the transmission of sound, images, or other information by telephone, telex, telegram, cable, broadcasting, satellite, electronic mail, facsimile services etc. and include business network services, teleconferencing, and support services. Postal and courier services encompass the pick-up, transport and delivery of letters, newspapers, periodicals, brochures, other printed matter, parcels, and packages by national postal administrations and other operators. Also included are post office counter and mailbox rental services.
- **Construction services** cover work performed on construction projects and installations by employees of an enterprise in locations outside the economic territory of the enterprise. The work is generally performed for a short time period (less than one year but this rule is to be applied flexibly). Goods imported by the enterprise for use in the projects, and expenditures for local supplies, etc. are included in the value of these services rather than under goods.
- **Insurance services** cover the provision of various types of insurance to non-residents by resident insurance enterprises, and vice versa. Such services cover freight insurance, other types of direct insurance (i.e. life - including pension and annuity services, other casualty or accident, health, general liability, fire, marine, aviation, etc. insurance); also included in insurance services are agent commissions related to insurance transactions. International insurance services are estimated or valued by service charges included in total premiums earned rather than by total premiums. Gross premiums and gross claims are recorded as memorandum items.
- **Financial services** cover financial intermediary and auxiliary services (except those of insurance enterprises and pension funds) conducted between residents and non-residents. Included are intermediary service fees, such as those associated with letters of credit, bankers' acceptances, lines of credit, financial leasing, and foreign exchange transactions. Also included are commissions and other fees related to transactions in securities - brokerage, placement of issues, underwritings, redemptions, and arrangements of swaps, and options, and other hedging instruments; commissions of commodity futures traders; and services related to asset management, financial market operational and regulatory services, security custody services, etc. Service charges on purchases of International Monetary Fund resources are also included. Financial intermediation services indirectly measured are excluded.
- **Computer and information services** cover computer data and news-related service transactions between residents and non-residents. Computer services cover hardware and software consultancy and implementation: provision of advice and assistance on matters related to the management of computer resources; analysis, design and programming of systems ready to use, and technical consultancy related to software; development, production, supply and documentation of customised software including operating systems made on order for specific users; maintenance and other support services such as training. Excluded are packaged (non-customised) software and non-specific computer training courses which are treated in the same way as other educational services. Information services include database

services: database conception, data storage, and data dissemination on-line and on magnetic media; news agency services including provision of news, photographs, and feature articles to the media; and direct, non-bulk subscriptions to newspapers and periodicals.

- **Royalties and licence fees** cover the exchange of payments and receipts between residents and non-residents for the authorised use of intangible, non-produced, non-financial assets and proprietary rights (such as patents, copyrights, trademarks, industrial processes, franchises, etc.) and with the use, through licensing agreements, of produced originals or prototypes (such as manuscripts and films).
- **Other business services** cover various categories, other than those previously defined. The grouping of these services is not indicative of their relative importance. The three following categories are identified:

- Merchandising and other trade-related services cover commissions on goods and services transactions between (i) resident merchants, commodity brokers, dealers, and commission agents and (ii) non-residents.

*Merchandising* is defined as the purchase of a good by a resident from a non-resident and the subsequent resale of the good to another non-resident; during the process, the good does not enter or leave the compiling economy. The difference between the value of goods when acquired and the value when sold is recorded as the value of merchandising services provided.

*Other trade-related* services include transactions in ships, aircraft, and auction sales. Franchising fees, brokerage in financial services and transport-related fees are excluded.

- Operational leasing services (rental) without operators cover resident/non-resident leasing and charters of ships, aircraft, and transportation equipment such as railway cars containers, rigs, etc. without crew. Financial leasing, leasing of telecommunications lines and leasing of land, buildings and other real estate, and car rentals to foreign travellers are excluded.
- Miscellaneous business professional and technical services are subdivided into:

*Legal, accounting, management consulting, and public relations services* which cover the provision (by/for residents for/by non-residents) of legal advice, representation, and documentation; auditing, bookkeeping, and tax consultant services; and management consulting related to the provision of advice, guidance, or operational assistance to business.

*Advertising, market research and public opinion polling services* transacted between residents and non-residents cover the design, creation, and marketing of advertisements by advertising agencies; media placement, including the purchase and sale of advertising space; exhibition services provided by trade fairs; the promotion of products abroad; market research; and public opinion polling abroad on various issues.

*Research and development services* cover those services that are transacted between residents and non-residents and associated with basic research, applied research, and experimental development of new products and processes. In principle, such activities in the sciences, social sciences, and humanities are covered; included is the development of operating systems that represent technological advances. Market research, technical studies, and consultancy work are excluded.

*Architectural, engineering and other technical services* cover resident/non-resident transactions related to architectural design of urban and other development projects; planning and project design and supervision of dams, bridges, airports, turnkey projects, etc.; surveying, cartography, product testing and certification, and technical inspection services.

*Agricultural, mining and on-site processing services* cover services incidental to agriculture, hunting, trapping, forestry and logging, and fishing; services rendered at oil and gas fields; waste treatment and depollution services; sanitation and other on-site processing.

*Other miscellaneous business, professional and technical services* cover placement of personnel, security and investigation services, translation and interpretation, photographic services, building cleaning, etc.

*Services between affiliated enterprises, n.i.e.* is a residual category. It covers payments by affiliates to their parent companies for general management costs (for planning, organising and controlling) and reimbursements of expenses settled directly by parent companies, funds transferred by parent companies to affiliates for covering overhead expenses, and any other services between affiliated enterprises that cannot be broken into individual service categories.

- **Personal, cultural and recreational services** involving transactions between residents and non-residents are subdivided into two categories:
  - Audiovisual and related services comprise services and associated fees related to the production of motion pictures, radio and television programs, and musical recordings.
  - Other personal, cultural and recreational services comprise services such as those associated with museums, libraries, archives, and other cultural, sporting, and recreational activities. Also included are fees for services, including provision of correspondence courses, rendered abroad by teachers or doctors. All expenditures by travellers on education and health are excluded.
- **Government services, n.i.e.** is a residual category covering government service transactions (including those of international organisations) not contained in previous classifications. Included are all transactions by embassies, consulates, military units, and defence agencies with residents of economies in which the embassies, etc. are located and all transactions with other economies.

Transactions in this category comprise those for goods and services (such as office supplies, furnishings, utilities, official vehicles and operation and maintenance, and official entertainment) and personal expenditures incurred by diplomats and consular staff and their dependants in the economies in which they are located. Also included in this category are transactions, by other official entities (such as aid missions and government tourist, information, and promotion offices) located in economies abroad. Included, as well, are transactions that are associated with general administrative expenditures, etc. and not classified elsewhere. In addition, transactions associated with aid services that are provided by non-military agencies, do not give rise to any payments, and have offsets in transfers are included in this category. Last, transactions associated with the provision of joint military arrangements and peacekeeping forces, such as those of the United Nations, are included in government services, n.i.e..

## Income

**Income** contains two main items:

**Compensation of employees** records wages, salaries and other benefits, in cash or in kind, earned by individuals for work performed for economic units whose place of residence is different from their own (border workers, seasonal workers, employees of international organisations, etc.).

**Investment income** covers income which a resident entity derives from the ownership of external financial assets (credit) and income non-residents derive from their financial assets invested in the compiling economy (debit). This includes interest and dividends on direct, portfolio and other investments.

## Current transfers

**Current transfers** form a group separate from **goods**, **services** and **income** because they are generally conceived as showing distinctive characteristics. However, the distinction between real resources and transfers is sometimes rather arbitrary. For example, receipts by an economy from certain individuals working abroad are classified either as current transfers or as compensation of employees, depending on how long the individuals have stayed in the countries where they are working. The BPM5 sets a number of criteria that enable to establish whether a flow is a current transfer or not.

Current transfers are all transfers that are not transfers of capital. Therefore, they consist of all transfers that do not involve:

- transfers of ownership of fixed assets,
- transfers of funds linked to, or conditioned upon, acquisition or disposal of fixed assets,
- forgiveness of liabilities by creditors when no counterpart is received in return.

Current and capital transfers may also be distinguished from their effects: current transfers directly affect the level of disposable income and should affect the consumption of goods and services whereas capital transfers should result in changes in the stocks of assets of one or both parties to the transaction.

This publication contains data on EU international transactions in services between 1997 and 2005, and is divided into two parts.

The first part is analytical and gives the most recent portrait of European Union (EU-25, EU-15) international transactions. It highlights the main trends of EU trade in services in 2005 and underlines the results of the EU with its main partner zones.

The second part presents statistics on international trade in services of the EU-25 and EU-15 with partner World, Extra-EU-25/EU-15, Intra-EU-25/EU-15, Canada, the United States and Japan, for the main services items (services, transportation...) and 44 items of internationally tradable services. The period covered is from 1997 to 2005. Statistics are also available for 2005 on the geographical breakdown (in relation to 50 countries and partner zones and 17 items) of services of the EU-25, the EU-15, Norway, the United States and Japan.

To allow comparisons, these figures have been harmonised according to a common methodology.

Information is also given on the methodological framework of the 5<sup>th</sup> IMF manual which is used for current international transactions. All flows are expressed in Euro (in Ecu to end 1998).
