VORWORT

Gegenstand dieser Veröffentlichung sind die zusammengefassten Energiebilanzen 2001 und 2002, nach Mitgliedstaaten und für die Europäische Union insgesamt, ausgedrückt in spezifischen Einheiten und in Tonnen Rohöleinheiten. Die Bilanzen wurden gemäss der Methode der "Endenergiebilanzen" aufgestellt, wonach sämtliche Ströme aufgrund des tatsächlichen Energiegehalts jedes Energieträgers gemessen werden und zwar ohne Substitutionshypothese und ohne Äquivalenzberechnung.

FOREWORD

The current publication, which is exclusively devoted to the global energy balance sheets, presents, for the years 2001 and 2002, the balance sheets expressed in specific units and in tonnes of oil equivalent, for each of the Member States and for the European Union as a whole. The balance sheets have been constructed according to the methodology for "Supplied Energy Balances", where all the operations are harmonized on the basis of the energy content of each source and form of energy, without any hypothetical substitutions, nor any calculation of equivalence.

AVANT-PROPOS

Cette publication, consacrée exclusivement aux bilans globaux de l'énergie, présente pour les années 2001 et 2002 les bilans exprimés en unités spécifiques et en tonnes d'équivalent pétrole pour chacun des Etats membres et pour l'Union Européenne dans son ensemble. Les bilans ont été élaborés selon la méthodologie dite des "Bilans de l'Energie finale", où toutes les opérations sont comptabilisées sur la base du contenu énergétique de chaque source et forme d'énergie, sans aucune hypothèse de substitution ni aucun calcul d'équivalence.

⁽¹⁾ The tonne of oil equivalent is a conventional standardized unit defined on the basis of a tonne of oil with a net calorific value of 41868 kilojoules/kg. The conversion coefficients from the specific units to kgoe (kilogramme of oil equivalent) are thus computed by dividing the conversion coefficients to the kilojoules by 41868.

⁽¹⁾ La tonne d'équivalent pétrole est une unité conventionnelle standardisée définie sur la base d'une tonne de pétrole ayant un pouvoir calorifique inférieur de 41868 kilojoules/kg. Les coefficients de conversion des unités spécifiques vers le kgep (kilogramme d'équivalent pétrole) sont de ce fait calculés en divisant les coefficients de conversion vers les kilojoules par 41868.

Note: p = Provisional data / Chiffre provisoire

Gegenstand dieser Veröffentlichung sind die zusammengefassten Energiebilanzen 2001 und 2002, nach Mitgliedstaaten und für die Europäische Union insgesamt, ausgedrückt in spezifischen Einheiten und in Tonnen Rohöleinheiten. Die Bilanzen wurden gemäss der Methode der "Endenergiebilanzen" aufgestellt, wonach sämtliche Ströme aufgrund des tatsächlichen Energiegehalts jedes Energieträgers gemessen werden und zwar ohne Substitutionshypothese und ohne Äquivalenzberechnung.

The current publication, which is exclusively devoted to the global energy balance sheets, presents, for the years 2001 and 2002, the balance sheets expressed in specific units and in tons of oil equivalent, for each of the Member States and for the European Union as a whole. The balance sheets have been constructed according to the methodology for "Supplied Energy Balances", where all the operations are harmonized on the basis of the energy content of each source and form of energy, without any hypothetical substitutions, nor any calculation of equivalence.

Cette publication, consacrée exclusivement aux bilans globaux de l'énergie, présente pour les années 2001 et 2002 les bilans exprimés en unités spécifiques et en tonnes d'équivalent pétrole pour chacun des Etats membres et pour l'Union Européenne dans son ensemble. Les bilans ont été élaborés selon la méthodologie dite des "Bilans de l'Energie finale", où toutes les opérations sont comptabilisées sur la base du contenu énergétique de chaque source et forme d'énergie, sans aucune hypothèse de substitution ni aucun calcul d'équivalence.
