VORWORT

Gegenstand dieser Veröffentlichung sind die zusammengefassten Energiebilanzen 2003 und 2004, sowohl nach Mitgliedstaaten und Beitrittskandidaten der Europäischen Union als auch für Island und Norwegen, ausgedrückt in spezifischen Einheiten und in Tonnen Rohöleinheiten. Die Bilanzen wurden gemäss der von Eurostat angewandten Methode für "Energiebilanzen" aufgestellt, wonach sämtliche Ströme aufgrund des tatsächlichen Energiegehalts jedes Energieträgers gemessen werden und zwar ohne Substitutionshypothese und ohne Äquivalenzberechnung.

FOREWORD

The current publication, which is exclusively devoted to the global energy balance sheets, presents, for the years 2003 and 2004, the balance sheets expressed in specific units and in tonnes of oil equivalent, for each Member State and Candidate Country of the European Union, Norway and Iceland. The balance sheets have been constructed according to Eurostat's methodology for Energy Balances, where all the operations are harmonized on the basis of the energy content of each source and form of energy, without any hypothetical substitutions, nor any calculation of equivalence.

AVANT-PROPOS

Cette publication, consacrée exclusivement aux bilans globaux de l'énergie, présente pour les années 2003 et 2004 les bilans exprimés en unités spécifiques et en tonnes d'équivalent pétrole pour chacun des Etats membres, les Pays Candidats à l'Union Européenne, la Norvège et l'Islande. Les bilans ont été élaborés selon la méthodologie des bilans d'énergie d'Eurostat, où toutes les opérations sont comptabilisées sur la base du contenu énergétique de chaque source et forme d'énergie, sans aucune hypothèse de substitution ni aucun calcul d'équivalence.

⁽¹⁾ The tonne of oil equivalent is a conventional standardized unit defined on the basis of a tonne of oil with a net calorific value of 41868 kilojoules/kg. The conversion coefficients from the specific units to kgoe (kilogramme of oil equivalent) are thus computed by dividing the conversion coefficients to the kilojoules by 41868.

⁽¹⁾ La tonne d'équivalent pétrole est une unité conventionnelle standardisée définie sur la base d'une tonne de pétrole ayant un pouvoir calorifique inférieur de 41868 kilojoules/kg. Les coefficients de conversion des unités spécifiques vers le kgep (kilogramme d'équivalent pétrole) sont de ce fait calculés en divisant les coefficients de conversion vers les kilojoules par 41868.
