## **FOREWORD**

The current publication presents the global energy balance sheets for the years 2006 and 2007. The balance sheets are expressed in fuel specific units and in tonnes of oil equivalent. They are compiled according to Eurostat's methodology for Energy Balances, based on the physical energy content of each source of energy. It covers the European Union, Member States and Candidate Countries as well as Norway.

## CONVERSION COEFFICIENTS

<sup>(1)</sup> The tonne of oil equivalent is a conventional standardized unit defined on the basis of a tonne of oil with a net calorific value of 41868 kilojoules/kg. The conversion coefficients from the specific units to kgoe (kilogramme of oil equivalent) are thus computed by dividing the conversion coefficients to the kilojoules by 41868.

Note: p = Provisional data , : = data not available
