Community survey on ICT usage in households and by individuals - Variables collected / published 2003-2022

Data published in this domain are based on the annually changing model questionnaires of the 'Community survey on ICT usage in households and by individuals'. The changes of questions in the model questionnaires are necessary because of the evolving situation of information and communication technologies (ICT). In addition, a group of questions may occasionnally focus on specific topics. For these reasons time series are sometimes short or interrupted or data seem to be missing. The following table lists the available variables per year.

Questions can be addressed to the functional mailbox: ESTAT-ICT-STATISTICS@ec.europa.eu

Document available only in English.
