## Farm structure in France - 2005

# 81% of the agricultural land and 69% of the livestock are in farms of 50 ha or more

This Statistics in Focus is part of a series of country-specific publications on the results of the Farm Structure Survey (FSS) 2005. It provides a brief but nevertheless comprehensive insight into the farm structure in France. A similar publication was issued in February 2005 presenting the results of the FSS 2003 in France.

In 2005 in France, about 527.4 thousand\* agricultural holdings had an

- economic size of at least 1 European Size Unit (ESU).

   These holdings employed 844.4 thousand AWUs (annual work units), the
- equivalent of 844.4 thousand persons working full time;
  they made use of about 27.5 million ha of agricultural area, which is on average 52.1 ha per holding (compared to 48.9 ha in 2003).

Among these 527.4 thousand agricultural holdings

- 31% made use of less than one AWU, while 29% made use of 2 or more AWUs;
- 21% used less than 5 ha agricultural area, while 16% used 100 ha or more;
- 18% were holdings of the type specialist cereals, oil seed and protein crops, 14% specialist vineyard, 12% specialist cattle rearing and fattening, 12% specialist dairy farming and 9% were other grazing livestock farms, including sheep;
- 44% of their agricultural area was situated in less favoured or mountain areas;
- 2% were organic farms;
- 22% benefited from direct investment aid.

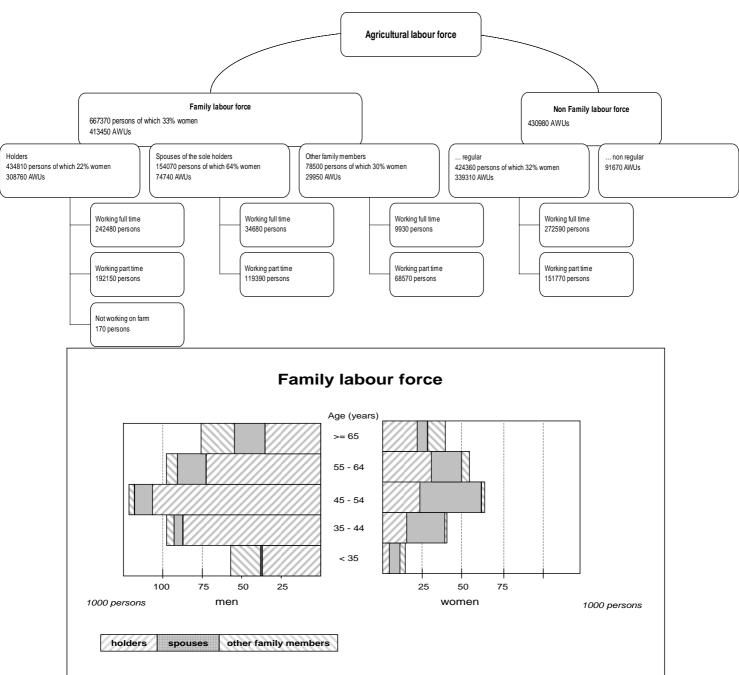

Among the 434.8 thousand sole holders

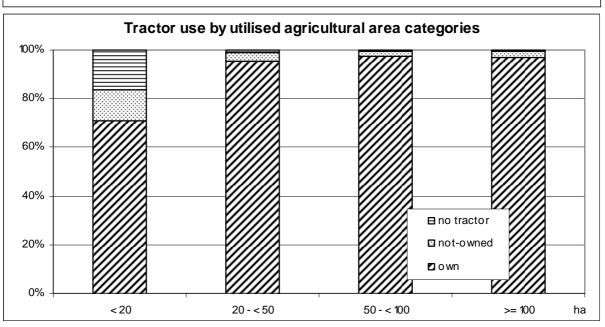

- 22% were women;
- 37% were aged 55 or more, and 10% were younger than 35 years;
- 18% had another gainful activity as their major occupation.

Due to differences in the threshold across Member States, the total number of farms is not comparable between countries. This is why the present analysis, including Tables 1-4 and the graphs focus on holdings of at least one ESU. See methodological notes for more information on the concept of the ESU.

### France 2005 - Holdings of at least 1 ESU

#### **≻METHODOLOGICAL NOTES**

The 2005 survey on the structure of agricultural holdings in France was carried out between October 2005 and April 2006 on a sample basis. The previous full-scale agricultural census was conducted in 2000. Since 2003 the results also include the overseas departments. The reference period of the survey was the crop year ending on 31 October 2005. However, in the case of the livestock, the reference date is the day of the interview.

The target population was the holdings producing agricultural goods, reaching a certain threshold (in terms of land area, number of livestock or volume of production) and independently run. These holdings were drawn from an updated permanent sampling frame. The frame was stratified by type of farming and economic size. For each department (NUTS 3) an exhaustiveness threshold (generally 250 ESU) was defined to ensure all units with greatest importance were included; these holdings were inserted into a separate stratum. Generally 20 strata (in Brittany 24) were defined in addition to the special ones. In the strata, random sampling with Neyman-allocation was applied based on SGM, or in some cases based on utilised agricultural area. In each department (NUTS 3) the number of holdings drawn varied between 300 and 1200, depending on the importance and diversity of agriculture. The sample size was 86 126 units (of which 4 081 were in the overseas departments).

For each activity ('enterprise') on a farm (for instance wheat, dairy cow or vineyard), a **standard gross margin (SGM)** is estimated, based on the area (or the number of heads) and a regional coefficient. The sum of such margins in a farm is its **economic size**, expressed in **European Size Units (ESU)**. 1 ESU is equal to 1200 euros.

Each farm is classified in the community typology by its economic size and its **type of farming**, depending on the share of each enterprise in its economic size. For instance, a farm where breeding sows account for more than 2/3 of the economic size, is classified as *specialist pig rearing* (type 5011). Depending on the level of aggregation, farms are grouped into 8 to 70 types.

Annual work unit (AWU) is equivalent to a worker employed on a full time basis for one year. In France it is 1603 hours (229 working days of 7 working hours per day).

**Livestock Unit (LU)** is equivalent to a dairy cow. The number of animals (number of heads) is converted into LU using a set of coefficients reflecting the feed requirements of the different animal categories. The LU coefficients used by EUROSTAT are different from those of France.

**Subsistence farming** refers here to all farms below 1 ESU economic size. Note that the number of farms cannot be compared between countries due to the differences in coverage of FSS.

#### **European Statistical Data Support:**

Eurostat set up with the members of the 'European statistical system' a network of support centres, which will exist in nearly all Member States as well as in some EFTA countries.

Their mission is to provide help and guidance to Internet users of European statistical data.

Contact details for this support network can be found on our Internet site: <a href="http://ec.europa.eu/eurostat/">http://ec.europa.eu/eurostat/</a>

A list of worldwide sales outlets is available at the: Office for Official Publications of the European Communities.
