2003 cereal harvest: Production down more than 10%

Pierre Bruyas

Exceptional climatic conditions seriously disrupted the 2003 cereal harvest. Spring frosts were followed by high temperatures, which had a negative impact on yields in the South of Europe, leading to the lowest cereal production figures recorded since 1996.

Cereal production: -10,7%

In the 2002-2003 marketing year, cereal production (excluding rice) in the European Union did not exceed 188.8 million tonnes, a decline of 10.7% on the previous year and the lowest level recorded since 1995.

- In France and Portugal the drop exceeded 20%.
- German, Italy, Belgium, United Kingdom and Austria occupied the middle ground, with a drop of 5% to 10%.
- Sweden, Finland, Greece, Spain, and Luxembourg recorded declines of 5% or less, or production remained stable.
- A sharp rise in production was recorded in Denmark, Ireland and the Netherlands (+3.4%, +8.6% and +10.7%).

The decline in production was the result of a reduction in both areas and yields. At 36.3 million hectares, areas under cultivation were also at their lowest level since 1996 (-3.0% compared to 2001-2002).

Common wheat production : -12,4%

In the 2002-2003 marketing year, common wheat production did not exceed 82.6 million tonnes, a decline of 12.4% on the previous year and the lowest level recorded since 1996.

- Finland, the Netherlands, Denmark and Sweden recorded substantial increases.
- Production in Belgium remained stable.
- There was a particularly sharp decline in Portugal (-51%) ;

EU-15	87522	94453	89172	95532	83157	94313	82578	-12.4%

- Another group of countries (Spain, France, Italy, Austria, Greece) saw a drop in production ranging from 15% to 20%.
 - Lastly, in Germany, Ireland and Luxembourg production fell by 5% and 7% respectively.
- The fall in production followed a decline in areas and yields. Areas under common wheat did not exceed 13.4 million hectares, i.e. a drop of 4.8% on 2002.
- Only Denmark, Finland and Sweden showed an increase in areas (of about 10% to 20%).
 - Areas were stable or slightly down in Belgium, Germany and the Netherlands.
 - In all other countries areas were down, with Portugal recording the greatest reduction, at -29%.
- The average yield in the Union was about 61.7q/ha, down 8.1% on the previous year.

Barley production: -2.7%.

In the 2002-2003 marketing year, barley production was 46.7 million tonnes. Despite the fact that the reduction was slight (-2.7%), the figure for this marketing year was the lowest recorded since 1996.

This was due to a drop in yields of about 3%. Areas under barley remained stable at their 2001-2002 levels, breaking with the long-term downward trend.

This stability is due in part to an increase in areas under spring barley following the repeat sowings necessitated by the winter frosts. As a result areas under barley remained stable, whereas they had been moving downward since 1996.

Situations differ substantially in the various Member States:

- Spain, Ireland, Luxembourg, Austria and the United Kingdom recorded sharp rises in production (from 2.4% to 19.1%).
- Belgium and Portugal recorded the sharpest falls in production (-26.9% and -42.5% respectively).
- France and Sweden recorded falls in excess of 10%.
- In all the other states the drop in production was between 2% and 9 %.

Grain maize production: -15.7%

Grain maize production did not exceed 34 million tonnes in the 2002-2003 marketing year, the lowest level since 1996. While areas fell only by 1.9%, yields were down 16.4% on the previous year.

- Only Greece showed an increase (10.5%) in production.
- Belgium, Germany, Spain, Italy, the Netherlands, Austria and Portugal recorded production falls of between 3.2% and 13.8%.
- France and Luxembourg recorded falls of 30.4% and 46.8%.

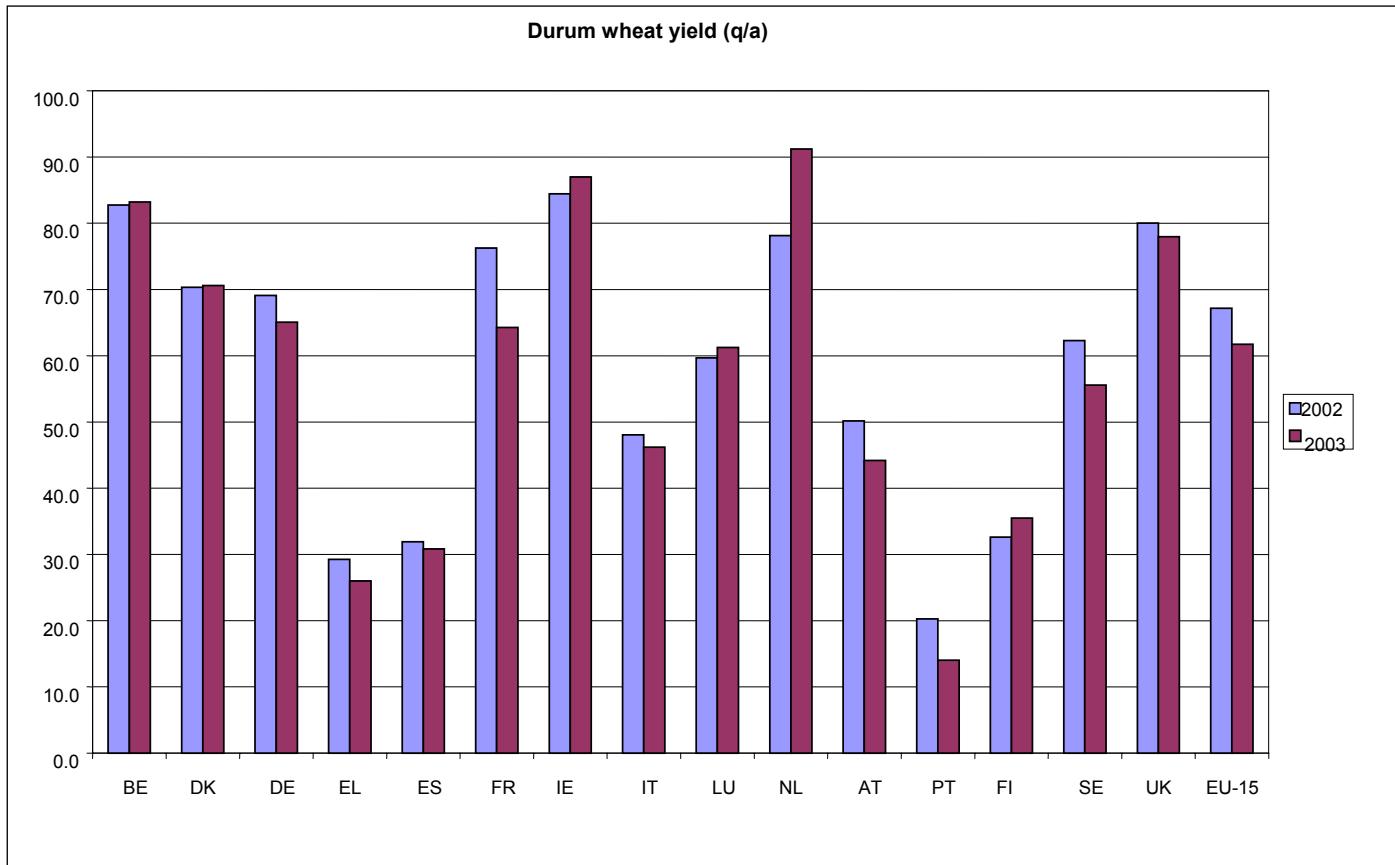

Durum wheat production: -4.5%

Durum wheat appeared less affected than other cereals. In fact production in the 2001-2002 marketing year had been at the highest level recorded since 1996. The fall in production was primarily due to a 3.0% decline in areas. At 24.4 q/ha yields remained close to normal.

➤ ESSENTIAL INFORMATION – METHODOLOGICAL NOTES

.....

Methodology box:

EU statistics on cereals are governed by Council Regulation No 837/90 of 26 March 1990. This stipulates that where production exceeds 50 000 tonnes for any cereal, the Member States shall provide Eurostat with annual data on:

- areas under cultivation,
- average yield and
- production harvested.

The data shall be submitted on the following dates:

Areas	Yield and production
- 1 October of the harvest year: provisional data .	- 15 November of the harvest year: initial estimates .
- 1 April following the harvest year: final figures .	- 1 February following the harvest year: provisional data . - 1 October following the harvest year: final figures

The following are included under cereal production:

- Common wheat ;
- Durum wheat ;
- Rye;
- Barley ;
- Oats
- Grain maize
- Cereals not elsewhere specified
- Maslin
- Sorghum
- Triticale
- Buckwheat
- Canary seed
- Mixed grains other than maslin
- Rice
