# Regional Gross Domestic Product in the European Union 2001

Andreas Krueger

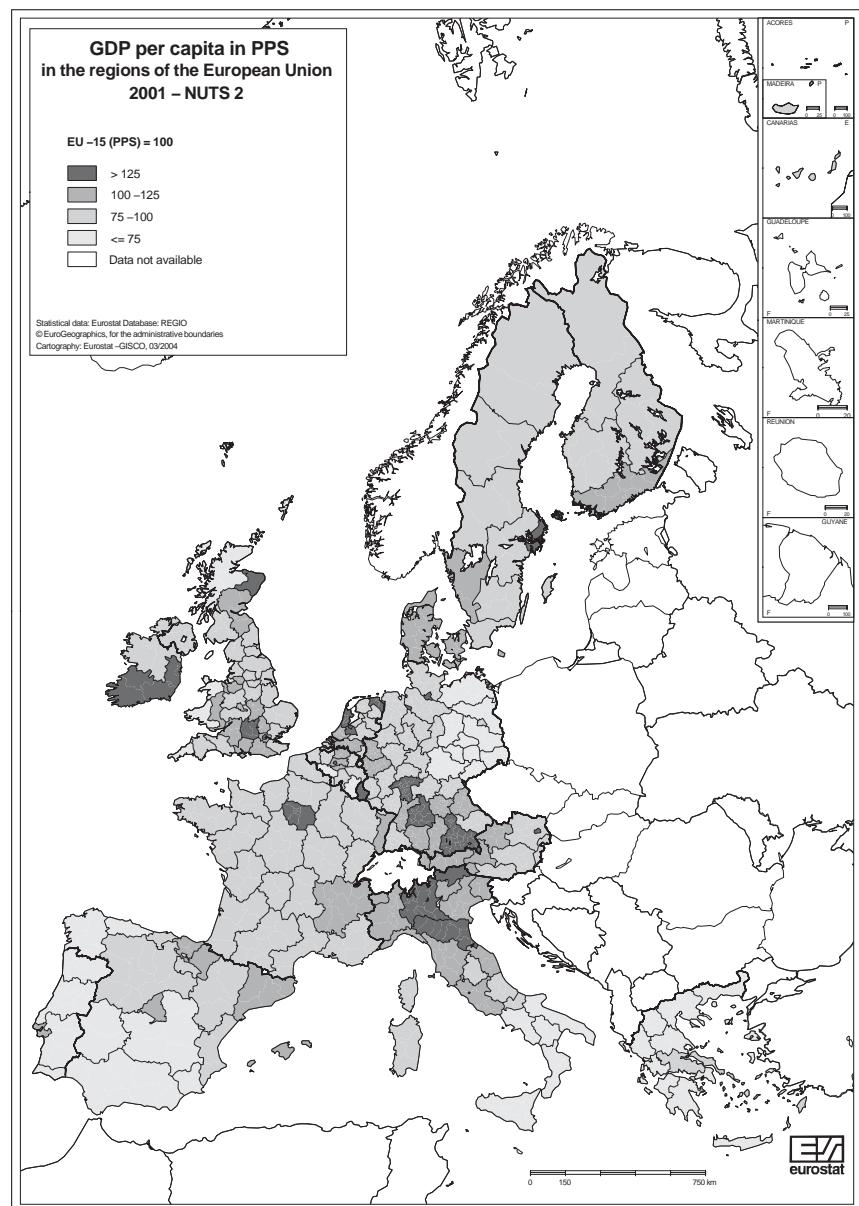

Table 1: Gross domestic Product (GDP) per capita - NUTS 2 - 2001

According to the most recent estimates for 2001, per capita GDP in purchasing power standards (PPS) in 43 of the 213 NUTS-2 regions of the European Union was below 75 % of the EU average of 23 338 PPS. Per capita GDP varied between 12 308 PPS (53 % of the EU average) for the Greek region of Dytiki Ellada and 61 316 PPS (263 % of the EU average) for Inner London in the United Kingdom.

## Major differences in per capita GDP between regions across the EU ...

In 2001, GDP per capita, expressed in terms of purchasing power standards, in the EU's 213 NUTS-2 regions ranged between 53 % of the EU15 average in Dytiki Ellada in Greece, to 263 % of the average in the Inner London region of the United Kingdom. This means that the figures for the regions with the lowest and highest per capita GDP differed by a factor of five. The EU

average was 23 338 PPS. Some 21 regions were above 125 % of the EU15 average, while about one fifth were below 75 % of this average.

Table 1 gives an overview of the regions at NUTS level 2 with the highest and the lowest per capita GDP.

Among the ten leading regions in the ranking, the order of the first six did not change compared to 2000. Berkshire, Buckinghamshire & Oxfordshire in the UK (rank 7) and Bolzano in Italy (rank 10) are new in this group.

Among the 21 regions exceeding the 125 % level, five were in Germany, three each in Italy, the Netherlands and the United Kingdom, and one each in Belgium, France, Ireland, Luxembourg, Austria, Finland and Sweden.

During the period under review, there were 43 regions whose per capita GDP (in PPS) was below 75 % of the EU average, including eleven out of the thirteen Greek regions, five out of Portugal's seven regions, ten regions in the new Länder of Germany and six regions in Spain. Further, there were five regions in Italy, four in the United Kingdom and two in Belgium. In 2001, these 43 regions accounted for 71 million inhabitants, 18.8 % of the EU's total population.

It should be noted that 2001 data is not yet available for the French overseas departments, or Ceuta and Melilla in Spain. However, based on 2000 figures, these regions would also have fallen below 75 % of the EU15 average.

Region	GDP (PPS) per capita of NUTS2 regions as % of EU15 average
Inner London (UK)	262.7
Bruxelles-Capitale (BE)	217.5
Luxembourg	194.1
Hamburg (DE)	170.8
Île de France (FR)	164.8
Wien (AT)	156.0
Berkshire, Buckinghamshire & Oxfordshire (UK)	148.6
Oberbayern (DE)	148.0
Stockholm (SE)	145.0
Provincia Autonoma Bolzano (IT)	143.3
.....	.....
Dessau (DE)	60.1
Ionia Nisia (EL)	60.0
Cornwall & Isles of Scilly (UK)	59.4
Centro (PT)	57.8
Norte (PT)	56.9
Acores (PT)	55.7
Ipeiros (EL)	54.1
Extremadura (ES)	53.5
Anatoliki Makedonia, Thraki (EL)	53.5
Dytiki Ellada (EL)	52.7

Table 1: The regions of the EU with the lowest/highest GDP per capita (in PPS), 2001

## ... and within Member States

In seven out of the 13 Member States with NUTS-2 regions, the highest regional per capita GDP for 2001 was more than double the lowest. These countries are Belgium (Brussels: 217 % of the EU average; Hainaut: 69 %), Germany (Hamburg: 171 %; Dessau: 60 %), Spain (Madrid: 112 %; Extremadure: 54 %), France (Île-de-France: 165 %; Corse: 80 %), Italy (Bolzano: 143 %;

Calabria: 62 %), Austria (Wien: 156 %; Burgenland: 75 %) and the United Kingdom (Inner London: 263 %; Cornwall and Isles of Scilly: 60 %).

On the other hand, regional divergences are relatively moderate in Greece (Sterea Ellada: 95 %; Dytiki Ellada: 53 %) and Sweden (Stockholm: 145 %; Norra Mellansverige: 89 %).

## 5-year performance: Luxembourg and Inner London leading ...

Table 2 gives an overview of the performance of NUTS level 2 regions over the last 5 years. It shows by how many percentage points the per capita GDP (in PPS) of the 10 most dynamic and the 10 least dynamic regions of the EU has changed between 1996 and 2001 in relation to the average of EU15.

Luxembourg and Inner London, which also appear in the leading 10 regions in terms of level of GDP, have also been the most dynamic regions with increases of 33 and 32 percentage points, as compared to the EU average.

Region	Change of per capita GDP (in PPS) in percentage points of the EU15 average between 1996 and 2001
Luxembourg	33
Inner London (UK)	32
Southern and Eastern (IE)	27
Berks., Bucks. & Oxfordshire (UK)	22
Madeira (PT)	16
Border, Midland and Western (IE)	16
Åland (FI)	16
Peloponisos (EL)	14
Bedfordshire & Hertfordshire (UK)	13
Ipeiros (EL)	13
.....	.....
Trento (IT)	-10
Detmold (DE)	-10
Schleswig-Holstein (DE)	-10
Leipzig (DE)	-11
Hamburg (DE)	-11
Hannover (DE)	-13
Cumbria (UK)	-13
Köln (DE)	-14
Berlin (DE)	-15
Valle d'Aosta (IT)	-16

Table 2: 5-Year Performance of NUTS2 Regions

There are four regions among the 10 most dynamic which back in 1996 had a per capita GDP of under 75 % of the EU average: Madeira in Portugal (+ 16 percentage points), Border, Midland and Western in Ireland (+ 16), as well as Peloponisos (+ 14) and Ipeiros (+ 13), both in Greece.

Among the 10 least dynamic regions there was not a single one which had a per capita GDP of less than 75 % in 1996, but three of them were above 125 % at the time. Seven of these regions are in Germany, in particular larger urban agglomerations such as Berlin (-15 percentage points), Köln (-14), Hannover (-13), Hamburg (-11) and Leipzig (-11). The remaining three regions are Valle d'Aosta (-16) and Trento (-10), both in Italy, and Cumbria in the UK (-13).

### ... and regional divergences converging

The above findings suggest that regional divergences between EU regions have converged between 1996 and 2001. Further analysis confirms this: The weighted average per capita GDP (in PPS) of the five leading regions decreased from 200 % to 185 % of the EU average between 1996 and 2001. Over the same period

the weighted average of the five regions with the lowest per capita GDP increased from 50 % to 54 % of the EU average. This means that in 1996, the per capita GDP of the leading 5 regions was 4.0 times as high as that of the last 5 regions, whereas in 2001 this ratio had decreased to 3.4.

## ➤ ESSENTIAL INFORMATION – METHODOLOGICAL NOTES

**1. Data revisions:** Please note that, compared to the last publication and to the Eurostat news release 21/2004 of 18 February 2004, data for 1995 to 2001 have been revised. This publication does not take account of any data delivered to Eurostat later than 27 February, 2004.

**2. Harmonised estimation procedure:** At the level 2 regional breakdown considered in this publication, there are 213 regions in the EU. Data are also available on request for the years 1995-2001, as well as for a NUTS level 3 breakdown (1091 regions). National GDP data were provided by the national statistical offices in accordance with the rules of the European System of Accounts (ESA95). National figures are divided up between the regions according to the respective regional shares of gross value added at basic prices, this being the concept applied by ESA95.

Estimates of GDP are based on the structure of gross value added (GVA). GVA figures are used without correction for financial intermediation services indirectly measured (FISIM). Extra-regio GVA was allocated proportionally to the regions of a country. The conversion to PPS is based on national purchasing power parities. In December 2003, Purchasing Power Parities (PPP) were revised for all periods as from 1995 (see Statistics in Focus Theme 2 no. 64/2003 of 18 December 2003).

**3. Interpreting the data:** GDP and per capita GDP, are indicators of the output of a country or region and are thus a way of measuring and comparing the degree of economic development of countries or regions. However, GDP is not synonymous with the income ultimately available to private households resident in a country or region.

In addition, commuter flows hinder comparisons between countries – and particularly regions – in terms of per capita GDP. Some well-known examples include Inner London, Luxembourg and Hamburg. In such cases, net commuter arrivals generally mean that production in these regions is higher than would be possible with the resident population. Consequently, per capita GDP tends to overstate productivity in these regions and to underestimate it in the regions where the commuters live. Per capita GDP is also affected by population structure.
