

December 2001 survey of sheep and goat populations and production forecasts for 2002

Francis Weiler, Robert Poschacher

Further decline in the EU's sheep population; increase in sheep production in the United Kingdom

The European Union's sheep population was 5.3% lower in December 2001 than a year earlier, at 89.926 million animals. This means that it has been on a continual downward trend since 1998, following two big annual increases between the end of 1995 and the end of 1997. The decline was particularly pronounced in the UK¹ (-11.4%). Five Member States (EL, E, F, I and UK) account for most sheep production in the EU, and have more than 85% of the EU's sheep population. The Member States with the biggest sheep populations are E (25% of the total) and the UK (27%).

According to the latest forecasts, sheep production will increase by 0.9% to 64.9 million animals in 2002. This slight increase is due mainly to higher output in the UK (+23.7%). Production in all the other Member States is forecast to decline. Of the countries where sheep production is important, E and I are expected to show the biggest declines (-5.7% and -5.6% respectively).

EU's goat population still declining, but higher production in Spain

Following an increase between 1996 and 1997 and between 1999 and 2000, the EU's goat population has been on a continual downward path, to stand at 11.6 million animals according to the December 2001 surveys. This means that, since the December 2000 survey, the population declined slightly (-0.2%). The EU's biggest goat populations are in EL and E, which between them account for nearly 70% of the EU total.

Gross indigenous production of goats, which has been in decline since 1997, will stand at 8.2 million animals in 2002, following what is expected to be the first annual increase (4.8%) since 1997. Production is increasing particularly strongly in E (+12.9%), although this has to be seen against an 8.1% decline in 2001. Production in E will therefore be at about the same level as in 2000.
