1. Introduction **9**

1.1. The importance of measuring international supply of services by modes of supply for policy needs 9

1.2. Statistics on trade in services by mode of supply in a national, international and supranational context 12

1.3. Statistical and legal framework 14

1.4. Institutional arrangements 15

1.5. Digital trade and modes of supply 16

1.6. Scope of the guide 16

1.7. Structure of this guide 17

Part A: Definitions and concepts **19**

2. Modes of supply explained **19**

2.1.The four modes of supply according to the General Agreement on Trade in Services 19

2.2. Modes of supply in practice 21

2.2.1. Multimodal supply 22

2.2.2. Subcontracting of services 24

2.2.3. Digital intermediation platforms (DIPs) 26

3. Definitions and key concepts **28**

3.1. Main concepts 28

3.1.1. Statistical units 28

3.1.2. Residence 28

3.1.3. Direction of supply 29

3.2. Data needs for measuring the international supply of services 29

3.3. Trade in services as defined in the balance of payments framework 31

3.4. Foreign affiliates statistics (FATS) 32

3.5. Main breakdowns for targeted variables 35

3.5.1. Partner country 35

3.5.2. Product breakdown 35

3.5.3. Economic activity 36

4. Classification systems **37**

4.1. Introduction 37

4.2. Classifications of products 38

4.2.1. Extended balance of payments services classification 2010 (EBOPS 2010) 38

4.2.2. Central product classification (CPC), Version 2.1. 39

4.2.3. Statistical classification of products by activity (CPA) 39
4.2.4. The General Agreement on Tariffs and Trade (GATT) services sectoral classification list (W120) 39
4.3. Classification of economic activities 40
4.3.1. International standard industrial classification of all economic activities (ISIC), Rev. 4 40
4.3.2. Statistical classification of economic activities in the European Community (NACE) Rev.2 40
4.4. Classification of countries, geographical breakdown for partner countries 41
Part B: Recommended methodology and estimation models 42
5. Data sources – overview 42
5.1. International supply of services (ISS) data collection and modes of supply 42
5.2. Main input data collections – best practices 44
5.2.1. International Trade in Services data collection 44
5.2.2. Foreign Affiliates Statistics (FATS) data collection 45
5.2.3. Sources for distribution services 48
5.3. Possible data sources for estimating the modes of supply 48
5.3.1. Main sources for estimating mode 1 50
5.3.2. Sources for estimating mode 2 51
5.3.3. Sources for estimating mode 3 54
5.3.4. Sources for estimating mode 4 56
5.4. Guidance for a survey design and using the survey responses to estimate the supply of services by modes of supply 59
5.4.1. Experience of Selected Countries Designing and Using Data Collected on Surveys 60
5.4.2. The US Experience with Collecting Mode of Supply Information on Surveys 64
5.4.3. Statistics Norway – development of a questionnaire for MoS data collection 65
6. Estimating the modes of supply 66
6.1. Introduction 66
6.2. The MSITS 2010 simplified approach 67
6.3. The simplified approach in practice: the Eurostat-WTO model 70
6.3.1. Step 1: BOP data collection and adjustments 71
6.3.1.1. Travel 71
6.3.1.2. Construction 72
6.3.1.3. Distribution services 73
6.3.2. Step 2: allocation of EBOPS categories to modes of supply 74
6.3.3. Step 3: FATS data collection and adjustments 78
6.3.3.1. Wholesale and retail trade; repair of motor vehicles and motorcycles (G) 78
6.3.3.2. Financial and insurance activities (K) 79
6.3.3.3. Isolating output sold locally 79

6.3.4. Step 4: merging the data sets using an EBOPS-ISIC/NACE Rev.2 bridge table 79
6.4. Limitations of the Eurostat-WTO model and areas for future work 83
6.5. Summary of guidance notes 84
7. Estimating mode 1 and mode 4 85
7.1. Introduction 85
7.2. Estimating a split between mode 1 and mode 4 86
7.2.1. Digitally delivered trade and Mode 1 86
7.2.2. Information and Communication Technologies (ICT)-enabled services 87
7.2.3. Adjusting the allocation shares according to the location of the partner country/area 89
7.2.4. Adjusting the model for the Covid-19 related restrictions 89
7.3. Country examples and experience 90
7.3.1. Austrian approach in estimating Modes 1 and 4 90
7.3.2. The US Experience with Estimating Modes 1 and 4 and Trade in Digitally Delivered Services 90
7.4. Summary of guidance notes and recommendations 91
8. Estimating mode 2 92
8.1. Introduction 92
8.2. Sources for estimating mode 2 93
8.2.1. Balance of payments Travel item 93
8.2.2. Tourism statistics as an auxiliary data source 94
8.2.3. Other sources 95
8.2.4. Big data sources - mobile phone data 96
8.3. Focus on excluding goods from the travel item 96
8.3.1. Exclusion of the goods value from the Travel item 97
8.3.2. Some national estimations of the goods in the Travel item 97
8.4. Mode 2 covering movement of property 99
8.5. Mode 2 in government goods and services 99
8.6. Summary of guidance notes and recommendations 99
9. Estimating mode 3 101
9.1. Introduction 101
9.2. Definition and collection of inward and outward FATS 102
9.3. From FATS to mode 3 refinements and complementary sources 105
9.4. Correspondence between economic activity and EBOPS items 105
9.5. Adjustments to FATS data 106
9.5.1. Output versus turnover for estimating mode 3 106
9.5.2. Separating the value of goods and services in the FATS turnover, and identifying turnover sold locally 109
9.5.3. Estimating missing variables using data from other domains and microdata linking 112

9.5.4. Distribution services in mode 3 113
9.5.5. Services in manufacturing activities (NACE C10-32) 113
9.6. Summary of guidance notes and recommendations 113
10. Distribution services 115
10.1. Distribution services explained 115
10.2. Distribution services under mode 1 117
10.2.1. Estimating distribution services in mode 1: approach using supply-use tables 118
10.2.2. Estimating distribution services in mode 1 using Structural Business Statistics combined with TEC statistics 119
10.3. Distribution services under mode 2 119
Part C: Focus on the users 120
11. Dissemination of statistics by mode of supply 120
11.1. Introduction 120
11.2. Dissemination strategy 120
11.3. Validation 122
11.4. Communication strategy 122
Part D Possible directions for future research 124
12. Future work and challenges 124
12.1. Introduction 124
12.2. Improving the Eurostat-WTO model and refining adjustments for ITSS data 124
12.3. Improving Mode 3 and distribution services 125
Part E: National experience and country cases 126
13. Country experiences and cases 126
13.1. Estimating modes 1 and 4 126
13.1.1. Hungarian experience in estimating modes 1, 2 and 4 using surveys 126
13.1.2. Austrian approach to estimating Modes 1 and 4 128
13.2. Estimating mode 2 – examples of estimating goods in the travel item 131
13.2.1. Czechia 131
13.2.2. Italy 131
13.2.3. The Netherlands 132
13.2.4. Poland 134
13.2.5. Spain 134
13.2.6. Sweden 135
13.3. Estimating mode 3 136
13.3.1. Italy 136
13.3.2. Poland 137
13.3.3. Spain 139

13.3.4. The United States of America....142
13.4. National practices – MoS data compilation....143
13.4.1. France....143
13.4.2. Estonia....144
13.4.3. The Netherlands....145
13.4.4. Spain....157
13.4.5. The United States of America....161
13.5. Norway - Developing a national survey for MoS compilation....163
Annexes....169
Annex I – Survey on international tourism in Italy – 2020 edition....169
Annex II – Eurostat survey on FATS sources....171
Annex III – The Netherlands, primary sources and detailed tables....173
Annex IV – Final MoS questionnaire and interview guide – Norway....177
Glossary....181
Acronyms and abbreviations....185
