|--|-----------|
| Foreword .....   | 3         |
| <b>1 Data prerequisites .....</b>                            | <b>7</b>  |
| <b>2 Index compilation methods .....</b>                     | <b>9</b>  |
| Summary of key points .....                                  | 11        |
| <b>3 Individual product specification .....</b>              | <b>15</b> |
| 3.1. Conceptual framework .....                              | 15        |
| 3.2. Specifying the individual product in practice .....     | 17        |
| 3.2.1. Time dimension .....                                  | 17        |
| 3.2.2. Outlet dimension .....                                | 17        |
| 3.2.3. Product dimension .....                               | 18        |
| Summary of key points .....                                  | 20        |
| <b>4 Multilateral index formulas .....</b>                   | <b>23</b> |
| 4.1. Gini–Eltető–Köves–Szulc .....                           | 23        |
| 4.2. Weighted time–product dummy .....                       | 25        |
| 4.3. Geary–Khamis .....                                      | 26        |
| 4.4. Analysis of the index formulas .....                    | 28        |
| 4.4.1. Main principles .....                                 | 28        |
| 4.4.2. Test approach .....                                   | 30        |
| 4.4.3. Hedonic indices and multilateral methods .....        | 32        |
| 4.4.4. Bilateral counterparts .....                          | 34        |
| 4.4.5. Robustness .....                                      | 34        |
| 4.4.6. Explainability .....                                  | 35        |
| Summary of key points .....                                  | 35        |
| <b>5 Time windows and extension methods .....</b>            | <b>37</b> |
| Summary of key points .....                                  | 42        |
| <b>6 Aggregation structures .....</b>                        | <b>45</b> |
| Summary of key points .....                                  | 47        |
| <b>7 Seasonal products .....</b>                             | <b>49</b> |
| Summary of key points .....                                  | 50        |
| <b>8 Contributions .....</b>                                 | <b>51</b> |
| 8.1. Contributions for the GEKS–Törnqvist .....              | 51        |
| 8.2. Contributions for the weighted time–product dummy ..... | 52        |
| 8.3. Contributions for the Geary–Khamis .....                | 53        |

|           |  |           |
|-----------|--|-----------|
| <b>9</b>  | <b>Harmonised Index of Consumer Prices at constant tax rates</b>   | <b>55</b> |
| 9.1.      | Treatment of the weights   | 55        |
| 9.2.      | Compilation of the Harmonised Index of Consumer Prices at constant tax rates with a multilateral method  | 56        |
| 9.3.      | Consistency in the monthly rates between the Harmonised Index of Consumer Prices and the Harmonised Index of Consumer Prices at constant tax rates | 57        |
|           | Summary of key points  | 58        |
| <b>10</b> | <b>Introducing multilateral methods in the regular production of the Harmonised Index of Consumer Prices</b>                                       | <b>59</b> |
| 10.1.     | Test phase   | 59        |
| 10.2.     | Finalise the methodology   | 60        |
| 10.3.     | Build a production system  | 60        |
| 10.4.     | Communicate about the methodological change  | 61        |
|           | Summary of key points  | 62        |
|           | <b>Glossary</b>  | <b>63</b> |
|           | <b>Annex</b>   | <b>67</b> |
|           | Research agenda for multilateral methods   | 67        |
|           | <b>References</b>  | <b>69</b> |
