Introduction

1. Introduction

1.1. What is the purpose of this publication?

The purpose of this publication is to provide the compilers and users of European statistics on international trade in goods with sound information on the nomenclature used to classify the reporting and partner countries. Besides including the latest version ([Commission Implementing Regulation \(EU\) 2020/1470 of 12 October 2020](#)) of the *nomenclature of countries and territories for the European statistics on international trade in goods and on the geographical breakdown for other business statistics* — known as the '[Geonomenclature](#)' and abbreviated to GEONOM —, it also contains all the supplementary information that is essential to understand the content of this country classification and the evolution of its codes.

A further aim of this publication is to document the geographical and economic areas covered by the trade in goods statistics as disseminated by Eurostat via its [Data Navigation Tree](#) or via [Comext](#), Eurostat's reference database for international trade in goods.

In our effort to continuously improve our publications we invite our readers to provide any comments or suggestions they may have to the Comext support team at comextsupport@ec.europa.eu.

1.2. Which other documents should be read in conjunction with this publication?

Further guidance and metadata on ITGS are available from the following sources:

- The [International Trade Data Reference Metadata](#) in Single Integrated Metadata Structure (SIMS) — These metadata cover methodological, qualitative and quantitative information in a standardised structure.

- The Statistical Explained article [International trade statistics – background](#) — This article answers some frequently asked questions on European ITGS.
- The [European business statistics user manual on EU international trade in goods statistics](#) — The purpose of this user manual is to explain to a wide range of users how the statistics relating to trade in goods, both between EU Member States and with non-EU countries, are collected, compiled, processed and published at European level. The different issues are tackled in a question and answer format.
- The [European business statistics compilers' manual for international trade in goods statistics – detailed data](#) — The purpose of this publication is to provide the compilers of European statistics on international trade in goods (ITGS) with clarifications on how to apply the EU legal provisions. With the help of concrete examples, clear text, definitions and systematic legislative references, the Manual is meant to serve as a practical reference document for National Statistical Authorities involved in the compilation of European ITGS.
- The [European business statistics compilers' manual for international trade in goods statistics – aggregated data](#) — This compilers' manual is meant to serve as a practical reference document for all National Statistical Authorities involved in the compilation of aggregated data on EU international trade in goods statistics. As such, it provides the necessary definitions and practical instructions regarding the preparation and transmission of aggregated data to Eurostat.
- The [European business statistics compilers' manual for international trade in goods statistics – trade by enterprise characteristics](#) — This compilers' manual is meant to serve as a practical reference document for all National Statistical Authorities involved in the compilation of EU statistics on trade in goods by enterprise characteristics (TEC). As such, it provides the necessary definitions and practical instructions regarding the preparation and transmission of TEC data to Eurostat.
- The [European business statistics compilers' manual for international trade in goods statistics – trade by invoicing currency](#) — This compilers' manual is meant to serve as a practical reference document for all National Statistical Authorities involved in the compilation of EU statistics on trade in goods by invoicing currency (TIC). As such, it provides the necessary definitions and practical instructions regarding the preparation and transmission of TIC data to Eurostat.
- The [Legislation page of Eurostat's website](#) dedicated to International trade in goods.

1.3. Where to find everything on European ITGS?

The Eurostat website gives access to sections dedicated to specific statistical domains. One of these sections relates to statistics on [international trade in goods](#). It provides useful data paths, infographics tools, answers to frequently asked questions as well as links to all available metadata including manuals, guidelines, quality reports, classifications and legal acts.

Background information

2. Background information

2.1. What is a statistical classification or nomenclature?

A statistical classification or nomenclature is an exhaustive and structured set of mutually exclusive and well-described categories, often presented in a hierarchy that is reflected by the numeric or alphabetical codes assigned to them, used to standardise concepts and compile statistical data.

Some classifications, like the NACE (Statistical Classification of Economic Activities), are multidisciplinary, i.e. applicable in different statistical domains, while others are very closely related to their domain, like the European Shortlist for Causes of Death.

The classifications used by Eurostat and the EU Member States are specified in regulations or gentleman's agreements. This procedure ensures that the data published at European level are comparable between Member States. Note that, at national level, Member States may use a different, nationally adapted version of a classification.

2.2. What is the purpose of the Geonomenclature?

Data collection

The 'Nomenclature of countries and territories for the European statistics on international trade in goods and on the geographical breakdown for other business statistics', known as the '[Geonomenclature](#)' and abbreviated to GEONOM, is used by the EU Member States to **collect** detailed statistics on their exchanges of goods with other Member States (intra-EU trade) or with non-EU countries (extra-EU trade).

Data dissemination

The Geonomenclature is also used by Eurostat to **disseminate** data through [Comext](#), Eurostat's reference database for international trade in goods. Comext provides access not only to recent and historical trade data of the EU and its individual Member States but also to the trade statistics of a significant number of non-EU countries.

2.3. How is the Geonomenclature evolving?

Reasons for changes

The Geonomenclature is subject to revisions in order to incorporate the adjustments needed for statistical and customs purposes and to take into account any geopolitical changes that may have occurred. The alphabetical coding of countries and territories is based on the current version of the standard ISO alpha 2 (ISO 3166), insofar as it is compatible with the requirements of the EU legislation. Note that a correspondence with the former 3-digit numerical coding is still maintained.

Changes implemented through legal provisions

From 2011 onwards, measures relating to changes in country codes and their format shall be adopted by the Commission by means of implementing acts. The European Statistical System Committee shall assist the Commission in that task. The Geonomenclature was previously maintained via Commission regulations, in accordance with the opinion of the Committee on Statistics Relating to the Trading of Goods with Non-Member Countries.

Where it all began

The very first version of the Geonomenclature (valid as from 1 January 1975) was included in Annex C of [Regulation \(EEC\) No 1736/75 of the Council of 24 June 1975](#) on the external trade statistics of the Community and statistics of trade between Member States.

- Article 6
 1. *In the statistical information medium, countries and territories shall be described in such a way that they may be easily and accurately classified under the appropriate heading of the country nomenclature for the external trade statistics of the Community and statistics of trade between the Member States referred to in Article 35.*
 2. *The code number given in the country nomenclature for the external trade statistics of the Community and statistics of trade between Member States must be indicated for each country.*
- Article 35

The data referred to in Article 22 (1) shall be compiled by country according to the current version of the country nomenclature for the external trade statistics of the Community and statistics of trade between Member States given in Annex C.

2.4. Alphabetical or numerical country codes?

Alpha-2 codes in data transmitted to Eurostat

Since 1 January 1999 (see [Commission Regulation \(EC\) No 2645/98 of 9 December 1998](#)), the Geonomenclature is based on the standard ISO alpha-2 (ISO 3166). However the EU Member States were allowed to continue using the former 3-digit numerical coding until December 2003 as reference month.

Alpha-2 or numerical codes in the Comext datasets

- Alpha-2 codes are used in monthly or yearly updated Comext datasets.
- Numerical codes are used in daily updated Comext datasets as well as for historical data relating to periods prior to 1988. To ensure the continuity of the time series, the numerical coding has been maintained to store the data transmitted by the EU Member States. The numerical codes are transcoded into the alpha-2 format for the monthly and yearly updated Comext datasets only.

Note that, in any Comext dataset using the numerical format of the Geonomenclature, a '0' is added as an extra first digit to the 3-digit numerical country codes listed in the 'PARTNER' statistical dimension. As an example, the partner 'United States' appears under the code 0400 instead of 400. The purpose is to ensure consistency between the country and zone coding.

2.5. Does the Geonomenclature match with the ISO 3166 standard?

What is ISO 3166?

ISO 3166 is the International Standard for country codes and codes for their subdivisions. The purpose of ISO 3166 is to define internationally recognised codes of letters and/or numbers which can be used to refer to countries and subdivisions. However, it does not define the names of countries – this information comes from United Nations sources (Terminology Bulletin Country Names and the Country and Region Codes for Statistical Use maintained by the United Nations Statistics Divisions).

The country codes can be represented either as a two-letter code (alpha-2) which is recommended as the general purpose code, a three-letter code (alpha-3) which is more closely related to the country name and a three digit numeric code (numeric-3) which can be useful to avoid using Latin script.

ISO 3166 is regularly updated to reflect changes in country names and subdivisions. These changes are done by the ISO 3166 Maintenance Agency (ISO3166/MA).

Correspondence between Geonomenclature and ISO 3166

The similarities and the differences are all documented in [Chapter 9 Correspondence ISO 3166 – Geonomenclature](#) on the basis of the following flags:

- * = Full correspondence
- + = Partial correspondence
- ** = ISO 3166 code classified under a different Geonomenclature code
- >>> = Geonomenclature codes with no correspondence in ISO 3166

The Geonomenclature matches with the ISO 3166 standard for most countries. In a few cases, the same code corresponds to a larger territory either in the Geonomenclature or in the ISO 3166 standard.

2.6. Which country nomenclature in which datasets?

European statistics on international trade in goods are disseminated on the Eurostat website through different datasets. Those datasets are all gathered under the theme 'International trade' and the '[International trade in goods](#)' dedicated branch.

The figure below shows that trade in goods data are grouped into four categories: aggregated data, detailed data, trade by enterprise characteristics and trade by invoicing currency.

More details on Eurostat's online database code list are provided in [Chapter 10 Link to Eurostat's online database \(data navigation tree\) code list](#).

2.7. How are economic or geographical zones coded?

In order to answer further user needs, the Geonomenclature is complemented by partner codes relating to economic and geographical zones. Those zones are defined on the basis of 4-digit numerical codes as shown in the examples below. The zones and their respective composition are documented in [Chapter 5 Economic zones](#) and [Chapter 6 Geographical zones](#). The geographical

zones are graphically presented in [Chapter 7 Maps](#).

Examples of economic zones (codes 1xxx):

- 1010 European Union (evolutionary definition)
- 1013 Euro area since 1999 (evolutionary definition)
- 1031 ACP — African, Caribbean and Pacific countries
- 1053 OPEC — Organisation of Petroleum Exporting Countries

Examples of geographical zones (codes 5xxx):

- 5000 World
- 5300 America
- 5310 North America
- 5320 Central America and Caribbean

Geonomenclature

3. Geonomenclature

3.1. Legal basis

The country classification currently in application is laid down by the [Commission Implementing Regulation \(EU\) 2020/1470](#) of 12 October 2020 on the nomenclature of countries and territories for the European statistics on international trade in goods and on the geographical breakdown for other business statistics — **Version valid as from 1 January 2021**

For an overview of the legislative developments over the past decades, see [section 2.3. How is the Geonomenclature evolving?](#)

3.2. Latest changes

3.2.1. Reasons for changes

Changes with effect from 1 January 2021

- Need to distinguish – according to the conditions laid down in relevant provisions of Union law – between United Kingdom (in respect of Northern Ireland) and United Kingdom (excluding Northern Ireland). Codes XI and XU are therefore created, with effect from 1 January 2021. These changes are to be seen in the broader context of the withdrawal of the United Kingdom from the European Union, and of the specific provisions agreed so as to avoid a hard border between Ireland and Northern Ireland.

Changes with effect from 1 January 2020

- The Italian municipality of Campione d'Italia, an Italian exclave in the territory of Switzerland, and the Italian waters of Lake Lugano should be included in the customs territory of the Union because the historical reasons justifying the exclusion of those territories, such as their isolation and economic disadvantages, no longer apply. For the same reasons, those territories should be included in the general arrangements for excise duty while continuing to be excluded from the common system of value added tax. In order to ensure that these changes apply consistently from the same point in time, the inclusion of those territories in the customs territory of the Union should apply from 1 January 2020.

Changes with effect from 1 January 2014

- With effect from 1 January 2014, Mayotte shall cease to be an overseas country or territory, to which the provisions of Part Four of the Treaty on the Functioning of the European Union (TFEU) apply, and shall become an outermost region of the Union within the meaning of Article 349 TFEU.

3.2.2. Changes in country codes and labels

TIPS FOR COMEXT USERS

- The codes QP, QQ, QU and QX do not distinguish between EU Member States and non-EU countries. This implies that, theoretically, the trade reported with those partner codes cannot be allocated either to intra-EU trade or to extra-EU trade. In order to maintain the principle according to which, at Member State level, the trade with the world corresponds to the aggregation of intra- and extra-EU trade, those four codes are allocated to the extra-EU partner zone in the data dissemination.

- The trade reported with the United Kingdom as partner country is available under the code GB. Since 1 February 2020, GB has been an extra-EU partner. However, the implementation of the Protocol on Ireland/Northern Ireland starting with 1 January 2021 requires special compilation measures, making it possible to distinguish between United Kingdom (in respect of Northern Ireland – code XI) and United Kingdom (excluding Northern Ireland – code XU). While most datasets present aggregated data under the single code GB, one dataset dedicated to *EU trade since 2021 with the United Kingdom* as partner country (code GB) provides the Comext users with the trade values for the three partner codes GB, XI and XU.

Development of the codes

4. Development of the codes

This chapter illustrates how the country codes have evolved over the last decades, from 1976 to the current year.

³ The Union for the Mediterranean (UfM) is an intergovernmental organisation bringing together the EU countries and 16 countries of the Southern and Eastern Mediterranean (Albania, Algeria, Bosnia and Herzegovina, Egypt, Israel, Jordan, Lebanon, Mauritania, Monaco, Montenegro, Morocco, North Macedonia, Palestine, Syria (currently suspended), Tunisia and Türkiye). It was launched in 2008. The MEDA programme is its main financial instrument, set up by Council Regulation (EC) No 1488/96 of 23 July 1996. MEDA comes from '**M**esures **D'**Accompagnement **f**inancières et **t**echniques à la réforme des structures économiques et sociales dans le cadre du partenariat euro-méditerranéen' (French for '**financial and technical measures to accompany** the reform of economic and social structures in the framework of the Euro-Mediterranean partnership').

7. Maps

This chapter graphically illustrates the zones which are documented in [Chapter 6 Geographical zones](#), with their respective composition.

Maps are produced by the Geographic information system (GIS) software maintained by the European Commission. They are provided for illustration purposes only, and do not aim at being a geo-referencing tool. Moreover, the Commission accepts no responsibility or liability whatsoever with regard to the information on this geographical dataset. More information on GIS is available at: <https://ec.europa.eu/eurostat/web/gisco/geodata>.

Correspondence ISO 3166 — Geonomenclature

9. Correspondence ISO 3166 — Geonomenclature

This chapter documents the similarities and differences between the ISO 3166 standard and the Geonomenclature on the basis of the following flags:

- * = Full correspondence
- + = Partial correspondence
- ** = ISO 3166 code classified under a different Geonomenclature code
- >>> = Geonomenclature codes with no correspondence in ISO 3166

The Geonomenclature matches with the ISO 3166 for most countries. Out of the 249 ISO 3166 codes, 229 codes have a full correspondence. There is only a partial correspondence for seven codes and 13 codes are classified under a different Geonomenclature code.

10. Link to Eurostat's online database (data navigation tree) code list

10.1. Use of Eurostat's online database code list

The geopolitical entities (reporting and partner countries) included in the '[Aggregated data](#)', '[Trade by enterprise characteristics](#)' and '[Trade by invoicing currency](#)' datasets accessible via Eurostat's Data Navigation Tree are classified according to Eurostat's online database code list. The EU Member States are listed alphabetically using their source language. The so-called protocol order is based on the Roman alphabetical order of their geographical names in source language(s).

Short name, in source language(s) (geographical name) ⁽¹⁾	Official name, in source language(s) (protocol name)	Short name in English (geographical name)	Official name in English (protocol name)	Country code ⁽²⁾	Former abbreviation ⁽³⁾
Belgique/België	Royaume de Belgique/ Koninkrijk België	Belgium	Kingdom of Belgium	BE	B
България ⁽⁴⁾	Република България	Bulgaria	Republic of Bulgaria	BG	—
Česko	Česká republika	Czechia	Czech Republic	CZ	—
Danmark	Kongeriget Danmark	Denmark	Kingdom of Denmark	DK	DK
Deutschland	Bundesrepublik Deutschland	Germany	Federal Republic of Germany	DE	D
Eesti	Eesti Vabariik	Estonia	Republic of Estonia	EE	—
Éire/Ireland ⁽⁵⁾	Éire/Ireland	Ireland	Ireland	IE	IRL
Ελλάδα ⁽⁶⁾	Ελληνική Δημοκρατία	Greece	Hellenic Republic	EL	EL
España	Reino de España	Spain	Kingdom of Spain	ES	E
France	République française	France	French Republic	FR	F
Hrvatska	Republika Hrvatska	Croatia	Republic of Croatia	HR	—
Italia	Repubblica italiana	Italy	Italian Republic	IT	I
Κύπρος ⁽⁷⁾	Κυπριακή Δημοκρατία	Cyprus	Republic of Cyprus	CY	—
Latvija	Latvijas Republika	Latvia	Republic of Latvia	LV	—
Lietuva	Lietuvos Respublika	Lithuania	Republic of Lithuania	LT	—
Luxembourg	Grand-Duché de Luxembourg	Luxembourg	Grand Duchy of Luxembourg	LU	L
Magyarország	Magyarország	Hungary	Hungary	HU	—
Malta	Repubblika ta' Malta	Malta	Republic of Malta	MT	—
Nederland ⁽⁸⁾	Koninkrijk der Nederlanden	Netherlands	Kingdom of the Netherlands	NL	NL
Österreich	Republik Österreich	Austria	Republic of Austria	AT	A
Polska	Rzeczpospolita Polska	Poland	Republic of Poland	PL	—
Portugal	República Portuguesa	Portugal	Portuguese Republic	PT	P
România	România	Romania	Romania	RO	—
Slovenija	Republika Slovenija	Slovenia	Republic of Slovenia	SI	—
Slovensko	Slovenská republika	Slovakia	Slovak Republic	SK	—
Suomi/Finland	Suomen tasavalta/ Republiken Finland	Finland	Republic of Finland	FI	FIN
Sverige	Konungariket Sverige	Sweden	Kingdom of Sweden	SE	S

⁽¹⁾ The short name in the source language(s) is used to fix the protocol order and is used in multilingual documents (see [Section 7.1.2](#)).

⁽²⁾ The abbreviation to use = ISO code, except for Greece, for which EL is recommended (instead of the ISO code GR).

⁽³⁾ The former abbreviations (generally taken from the international code for automobiles) were used until the end of 2002.

⁽⁴⁾ Latin transliteration: България = Bulgaria.

⁽⁵⁾ Do not use 'Republic of Ireland'. Although this name is found in some documents, it does not have official status.

⁽⁶⁾ Latin transliteration: Ελλάδα = Elláda.

⁽⁷⁾ Latin transliteration: Κύπρος = Kýpros.

⁽⁸⁾ Use 'Netherlands' not Holland, which is only part of the Netherlands (the provinces of North and South Holland).

The Geonomenclature is the country classification used for any trade in goods data transmitted to Eurostat. It is then necessary to ensure a conversion from the Geonomenclature to Eurostat's online database code list.

10.2. Conversion of codes

10.2.1. Country codes

The Geonomenclature matches with Eurostat's online database code list except for the few codes listed below.

European business statistics geonomenclature applicable to European statistics on international trade in goods

The purpose of this publication is to provide the compilers and users of European statistics on international trade in goods with sound information on the nomenclature used to classify the reporting and partner countries. Besides including the latest version of the nomenclature of countries and territories for the European statistics on international trade in goods — known as the 'Geonomenclature' and abbreviated to GEONOM —, it also contains all the supplementary information that is essential to understand the content of this country classification and the evolution of its codes. A further aim of this publication is to document the geographical and economic areas covered by the trade in goods statistics as disseminated by Eurostat.
