Handbook for compiling supply balance sheets

Animal feed: supply

Handbook for compiling supply balance sheets

Animal feed: supply

1. INTRODUCTION

The feed balance sheet questionnaire was agreed by the “Crop products statistics” Working Party of the Agricultural Statistics Committee.

The “total availability” column of the balance sheet refers to the quantities of all products intended for use for animal feeding during the reference period.

Normally, specific animals feed products are asked for in the questionnaire. For headings where no specific products are named (e.g. “by-products”, “other” or “not specified”), Member States should use their own classification, detailing the products concerned. Eurostat needs to know what products are included under these headings in order to know accurately the corresponding metabolisable energy and digestible crude protein quantities involved.

Some feed products are covered by a supply balance sheet and the quantities that should be entered in the animal feed balance questionnaire for these products are those given under “animal feedingstuffs” in the relevant supply balance sheet.

2. REFERENCE PERIOD

In general the crop year runs from July to June (12 months). For products covered by a supply balance sheet, the supply balance sheet period should be used when it matches. In the case of products for which the supply balance sheets are compiled for the calendar year (e.g. milk, animal fats), Member States are asked to provide data for the crop year. For other products the period July to June should be used or failing this, the closest possible period to this.

3. UNITS

Quantities should be given in 1 000 tonnes product weight and should represent the gross weight of the product used as feed, irrespective of the final form of the product (e.g. compound feed).

For by-products it is necessary to specify whether the data are expressed in actual weight or dry weight; the relevant dry matter percentage should also be given.

In the case of beet the weight of the roots only should be given; for other root crops it should be specified whether the weight applies to the roots only or the whole plant.

For “fodder maize” (212 000) and “other green annual fodder crops” (213 000) it should be indicated whether quantities are given in green weight or as silage.

In the case of temporary and perennial fodder crops (221 000 and 222 000) it is essential that Member States indicate whether the product weight given is in terms of hay, silage or green product. Green is defined as the green amount at harvest; silage is defined as weight of silage and not the green weight of the raw material; hay is defined as the crop cut and dried naturally on the farm.

4. ORIGIN OF ANIMAL FEEDINGSTUFFS

The origin of the various products should be given i.e. products should be classified to “home production”, “imports from EU” or “imports from non-EU countries”. This classification is necessary in order to determine the origin of Community supplies.

In the case of certain products resulting from the processing of raw materials (by-products from the milling industry, oil cakes) the following points should be noted:

- (1) The column “Imports” should include (1) feedingstuffs imported as such, either from EU or from non-EU countries and (2) produced from imported raw materials.
- (2) The column “Home production” should include feedingstuffs produced in the country from indigenous raw materials only.

5. BALANCE SHEET LINES: CONTENT OF CODES

The following are details of the data to be used for each code when filling in the feed balance questionnaire.

Marketable feedingstuffs (100 000)

Animal feedingstuffs of vegetable origin (110 000)

Cereals (111 000)

The quantities (1 000 tonnes grain) to be inserted here are those given under “animal feedingstuffs” in the cereals supply balance sheet. Separate balances are available for wheat (111 100), rye and maslin (111 200), barley (111 300), oats and mixed grains (111 400), maize (111 500), sorghum (110 600), triticale (111 700) and cereals not elsewhere specified, such as millet (111 800).

The industrial by-products of cereals not covered by these balance sheets are dealt with further down.

Rice (112 000)

The relevant quantity (1 000 tonnes broken rice) to insert here is that of the “animal feed” line in the broken rice balance.

Dried pulses (113 000)

The quantities (1 000 tonnes grain) to insert here are those given on the “animal feed” line of the dried pulses supply balance sheet. Separate balances are available for peas (113 100), beans and field beans (113 300), lupins and others, such as lentils or vetches.

Potatoes (114 000)

The quantities (1 000 tonnes tubers) to insert here are those given on the “animal feed” line in the potatoes supply balance sheet.

Sugar (115 000)

The quantities (1 000 tonnes white sugar) to insert here are those given on the “animal feed” line of the sugar supply balance sheet. Molasses are dealt with further down.

Vegetable oils and fats (116 000)

The quantities (1 000 tonnes crude oil) to insert here are those given on the “animal feed” line in the crop year vegetable fats and oils supply balance sheet.

Processed green fodder (117 000)

This heading refers to artificially dried fodder in meal or pellet form. The raw material may be lucerne or other green fodder crops artificially dried. NB: hay should not be included under this item. Quantities should be expressed in 1 000 tonnes of product weight. The amounts of raw materials processed should be deducted from the relevant totals under items 212 000, 213 000 221 000 and 222 000.

Manioc (118 000)

Quantities should be expressed in 1 000 tonnes of product weight. All forms of tapioca should be included. These products are generally imported (CN code 0714 10).

Other products of vegetable origin (119 000)

- (1) 119 400 Carob beans: 1 000 tonnes product weight
- (2) 119 600 Cocoa shells: 1 000 tonnes product weight
- (3) 119 800 Others: the name of the product and the unit used (dry weight, wet weight) should be indicated.
- (4) 119 900 Oil seeds: the quantities to be used here are those given in the oilseeds and oleaginous fruits and seeds supply balance sheet on the “animal feed” line.

Processing by-products (120 000)**By-products of the milling industry (121 000)**

This heading refers to by-products (1 000 tonnes product weight) from the milling of cereals and leguminous crops. All by-products from the milling of cereals for animal feed should be excluded (i.e. those already included in the cereals balance sheet) to avoid duplication. The type of cereal (wheat, maize, rice, others) should be specified. The PRODCOM classification describes them respectively under codes 15.61.50.10,30, 90; the Combined Nomenclature describes them under codes 23 02 10, 23 02 20, 23 02 30, 23 02 40 and 23 02 50.

By-products of the brewing industry (122 000)

This item refers to by-products (1 000 tonnes product weight) from the manufacture of malt and beer. The type of products included should be specified as well as indicating whether the quantities given are fresh (wet weight) or dried (dry weight). If possible the relevant dry matter percentages should also be provided. The PRODCOM classification

describes them under code 15.96.20; the Combined Nomenclature describes them under code 23 03 30 00.

By-products of the distilling industry (123 000)

This item refers to by-products (1 000 tonnes product weight) from the distilling of agricultural products for the production of alcohol. The type of products included should be specified as well as indicating whether the quantities given are fresh (wet weight) or dried (dry weight) together with the relevant dry matter percentages. The PRODCOM classification describes them under code 15.96.20; the Combined Nomenclature describes them under code 23 03 30 00.

By-products of the starch industry (124 000)

This line refers to by-products (1 000 tonnes product weight) from the manufacture of starch. The type of products included should be specified as well as indicating whether the quantities given are fresh (wet weight) or dried (dry weight).

- (1) 124 100: this code describes the gluten from the grain including “Gluten 60” of maize with a protein content of 60 %.
- (2) 124 200: Corn gluten feed is included under this heading and not under the heading of oil cakes of maize which refers to maize germ (126 500). If possible its protein content should be specified which normally is 21 %.

The PRODCOM classification describes them under code 15.96.20; the Combined Nomenclature describes them under code 23 03 10.

By-products of the sugar industry (125 000)

- (1) 125 100 Beet pulp: This heading refers to residues (1 000 tonnes product weight) from the processing of sugar beet. It should be indicated whether the quantities given are fresh (wet weight) or dried (dry weight) together with the relevant dry matter percentages. The PRODCOM classification describes fresh, highly pressed and dry pulp under code 15.83.30; the Combined Nomenclature describes them under code 23 03 30.
- (2) 125 200 Molasses: The quantities (1 000 tonnes product weight) to be used here are those given on the “animal feed” line of the molasses supply balance sheet.
- (3) 125 500 Others: This heading should include sugar cane bagasse (residue from cane sugar production), residuary liquors and other sugar refinery waste. The type of product and the unit used (dry weight, wet weight, etc.) should be indicated together with the relevant dry matter percentages.

Oil cakes (126 000)

The quantities (1 000 tonnes product weight) to be used here are those given on the “animal feed” line of the oil cakes supply balance sheet. The type should be mentioned: swede rape, turnip rape, sunflower, soya, linseed, maize germ, sesame, ground-nut, copra, palm kernel, cottonseed, olive cakes and others.

Other by-products (127 000)

This item refers to by-products (1 000 tonnes product weight) from those industries processing agricultural products, in particular citrus fruit and tomato pulp, residues from

the fruit and vegetable juice industry, residues from the processing of potatoes (other than the distilling industry), residues from processing in the food industry not elsewhere classified, and residues from processing in the non-food industry not elsewhere classified. The products included under this heading should be itemised, indicating whether the quantities given are fresh (wet weight) or dried (dry weight) together with the relevant dry matter percentages. The PRODCOM classification describes them under code 15.33.30; the Combined Nomenclature describes them under code 23 08 90.

Animal feedingstuffs of animal origin (130 000)

Processed marine animals (131 000)

This heading refers to animal feedingstuffs processed from fish or marine mammals.

- (1) 131 100 Fishmeal: This heading refers to meal (1 000 tonnes product weight) from the industrial processing of fish or fish waste. The PRODCOM classification describes them under code 15.20.17; the Combined Nomenclature describes them under code 23 01 20 00.
- (2) 131 500 Other: The quantities (1 000 tonnes product weight) to be included here are all other feed products produced from fish (e.g. fish silage) and other fisheries products: selachians, cetaceans, crustaceans, molluscs and other invertebrates, but excluding fats. The PRODCOM classification describes them under code 15.20.17; the Combined Nomenclature describes them under code 23 01 20 00

Processed from land animals (132 000)

This heading refers to animal feedingstuffs obtained by processing land animals. The products to be used here are those given on the “animal feed” line of the balance sheets for meat described by type, but established by civil year. The quantities are given in 1 000 tonnes product weight for cattle, pigs, sheep and goats, equidae, poultry, other; offal.

- (1) 132 100 Meat meal: This heading refers to meal processed from meat. The PRODCOM classification describes it under code 15.13.13; the Combined Nomenclature describes them under code 23 01 10 00.
- (2) 132 200 Bone meal: This heading refers to meal or powder obtained from the processing of bones.
- (3) 132 300 Blood meal: This heading refers to dried or dehydrated blood.
- (4) 132 400 Carcase meal: This heading refers to meal obtained from the processing of carcasses.
- (5) 132 500 Feather meal: This heading refers to meal obtained from the processing of feathers.
- (6) 132 700 Meat and bone meal: This heading refers to meal obtained from the processing of meat and bones.

- (7) 132 900 Other: Residues from the production of animal fats (e.g. greaves) should be included here.

Animal oils and fats (133 000)

The products to be used here are those given on the “animal feed” line in the animal oils and fats supply balance sheet, but established by civil year. The quantities are given in 1 000 tonnes melted fat.

- (1) 133 100 Marine animal oils and fats: marine mammals and others
- (2) 133 200 Land animal oils and fats: cattle, pigs, sheep and goats, poultry, other.

Milk and dairy products (134 000)

This heading refers to identified dairy products whose quantities are expressed in 1 000 tonnes product weight, in liquid or powder.

- (1) 134 100 Liquid whole milk: This total comprises cow (including buffalo), sheep and goats' milk fed as such to animals. The data of the milked milk is available in the ZPA1 current statistics database. The milk directly suckled is not included.
- (2) 134 200 Liquid skimmed milk and buttermilk: This heading refers to liquid skimmed milk and buttermilk in liquid feed form.
- (3) 134 300 Liquid whey: This heading comprises quantities of whey in liquid or concentrated feed form.
- (4) 134 400 Milk powder: This item refers to whole milk used in powder form. The quantities to be used are those entered on the “animal feed” line of the supply balance sheet
- (5) 134 500 Skimmed milk and buttermilk powder: This heading refers to skimmed milk and buttermilk (1 000 tonnes product weight) used in powder form.
- (6) 134 600 Whey powder: This heading comprises quantities of whey (1 000 tonnes product weight) consumed in powder or block form.

Animal feedingstuffs, not normally marketed (200 000)

This section of the questionnaire covers animal feedingstuffs produced from fodder crops or their by-products. The production data are those of the ZPA1 current statistics database.

Annual fodder crops (210 000)

This heading includes fodder produced from annual crops — whether main or secondary crops. Quantities are generally known in green weight since this is the form in which this feed is used. However, the dry matter content should be indicated when available.

Root crops (211 000)

- (1) 211 100 Sugar beet: This item (1 000 tonnes roots) refers to unprocessed sugar beet consumed in that form.
- (2) 211 200 Fodder beet: This item (1 000 tonnes roots) refers to fodder beet, semi-sugar beet or sugar beet cultivated exclusively for animal feed.
- (3) 211 300 Swedes: As this heading (1 000 tonnes) may include the roots only or the whole plant, the exact contents of this code should be specified.
- (4) 211 400 Fodder turnips: As in the case of swedes above, this heading may include the roots only or the whole plant so the exact contents (1 000 tonnes) of this code should be specified.
- (5) 211 500 Fodder carrots: Likewise, this heading may include the roots only or the whole plants so the exact contents (1 000 tonnes) of this code should be specified.
- (6) 211 600 Fodder kale and cabbage: This item (1 000 tonnes whole plant) refers to fodder kale and cabbage cultivated for animal feed.
- (7) 211 700 Other root crops: This heading (1 000 tonnes product weight) refers to Jerusalem artichokes, turnips, parsnips, gourds and fodder pumpkins used for animal feed.
- (8) 211 800 Sweet potatoes: 1 000 tonnes product weight.

Fodder maize (212 000)

This heading comprises maize harvested before full maturity of the grain, fed green to animals or ensiled.

Quantities of fodder maize fed green (code 212 100) should be expressed in 1 000 tonnes green weight.

Quantities of fodder maize fed as silage (code 212 200) should be expressed in 1 000 tonnes silage weight.

Note that quantities of artificially dried fodder maize should be deducted as they are already included under code 117 000 — Processed green fodder.

Other green fodder crops (213 000)

This heading comprises other crops harvested green for animal feed.

Quantities of green fodder (code 213 100) should be given in 1 000 tonnes green weight.

Quantities of green fodder fed as silage (code 213 200) should be expressed in 1 000 tonnes silage weight.

Note that quantities of artificially dried green fodder should be deducted as they are already included under code 117 000 — Processed green fodder.

If possible, a breakdown by type of green or ensiled fodder (grasses, cereals, oil seeds, pulses etc.) should be given.

Perennial fodder crops (220 000) — temporary and permanent

Temporary fodder (221 000)

This heading comprises animal feedingstuffs from temporary crops (more than one and less than five years), which may be main or secondary crops.

The quantities should be expressed in 1 000 tonnes of hay or green weight depending on the type of feed: harvested or grazed. The dry matter content of the unit used should be indicated if available.

Lucerne (221 100)

This heading refers to lucerne crops only. Amounts artificially dried should be deducted as they are already included under code 117 000.

Clover (221 200)

This heading refers to clover crops only (one variety or mixed). Amounts artificially dried should be deducted as they are already included under code 117 000.

Other pulses (221 300)

This heading refers to other pulse crops (sweet clover, sainfoin, etc.). Amounts artificially dried should be deducted, as they are already included under code 117 000.

Meadows (221 400)

This heading refers to perennial herbaceous crops (less than five years) of grasses as well as mixtures of grass and pulse. Amounts artificially dried should be deducted, as they are already included under code 117 000.

Pasture (221 500)

This heading refers to perennial herbaceous crops (less than five years) intended solely or mainly for grazing.

Permanent fodder crops and pastures (222 000)

This heading comprises feedingstuffs produced from permanent herbaceous crops with duration of more than five years. The quantities should be expressed in 1 000 tonnes of hay or green weight depending on the type of feed: harvested or grazed.

Meadows (222 100)

This heading refers to permanent herbaceous crops intended mainly for conversion into hay. Amounts artificially dried should be deducted, as they are already included under code 117 000.

Pasture (222 200)

This heading refers to permanent herbaceous crops intended mainly for grazing. Where possible, a breakdown should be given between grassland and rough grazing.

The code 222 210 is reserved to pastures for reindeers.

Silage fodder (222 500)

This heading refers to the quantities of ensiled feed expressed in 1 000 tonnes silage weight.

Other (222 700)

This heading refers to other amounts of fodder products not specified above.

Crop by-products (230 000)

Straw and chaff (231 000)

This heading refers mainly to straw (1 000 tonnes product weight) from cereals and oil seeds used for animal feed. A breakdown according to the different type of crops should be provided: wheat: 231 100; barley: 231 300; oats: 231 400; pulses: 231 700; other n.e.i.: 231 800.

Leaves and tops (232 000)

This heading comprises leaves and tops (1 000 tonnes green weight) mainly from sugar beet, fodder beet or other root crops used for animal feed. Leaves or waste from the harvest of certain vegetable crops (e.g. cabbages) should also be included here as should the stalk and sheath of maize.

Other (233 000)

This heading refers to products which are country specific (233 200) e.g. vegetables or “cimature di mais” or “foraggio” for Italy. The code 233 100 comprises the “witloof roots”.

Feedingstuffs not elsewhere specified (240 000)

Vegetables (241 000)

The quantities (1 000 tonnes product weight) to be used here are those given on the “animal feed” line of the vegetables supply balance sheet. Any quantities of vegetables not included in the balance sheet or above-mentioned by-products, such as waste from retail marketing should also be included here.

Fruit (242 000)

The quantities (1 000 tonnes product weight) to be used here are those given on the “animal feed” line of the fresh fruit, citrus fruit and dried fruits supply balance sheet. Quantities of fruit not included in the balance sheet or above-mentioned by-products, such as fruit not intended for human consumption or waste from retail marketing should also be included here.

Waste materials (243 000)

This heading refers to kitchen swill and other waste (e.g. commercial waste) (in 1 000 tonnes product weight).

Other (244 000)

This heading refers to products used for animal feed, which are not mentioned elsewhere, for example, acorns.
