

# Contents

<b>Introduction</b> .....	3
<b>Background</b> .....	9
Why do we need a manual for energy statistics in the household sector? .....	11
Initial developments .....	12
Contents of the manual .....	12
<b>Chapter 1: Situation of energy statistics in the household sector in the EU</b> .....	15
Introduction .....	17
1.1. Main actors in EU statistics .....	17
1.2. The Eurostat 2008 Task Force .....	18
1.3. Methods of data collection commonly used .....	19
1.4. Coverage of variables .....	20
1.5. Degree of coverage in EU .....	25
1.6. Summary and conclusions .....	25
<b>Chapter 2: Definitions</b> .....	27
Introduction .....	29
2.1. The household sector boundaries .....	29
2.2. List of definitions .....	31
2.2.1. Housing stock characteristics .....	31
2.2.2. Household characteristics .....	32
2.2.3. Consumption / expenditure of energy commodities .....	32
2.2.4. Household energy end-uses .....	32
2.2.5. Penetration of energy efficiency technologies .....	38
2.2.6. Energy controls .....	39
<b>Chapter 3: Description of methods</b> .....	41
Introduction .....	43
3.1. Business surveys .....	44
Introduction .....	44
3.1.1. Strengths and weaknesses of business surveys .....	44
3.1.2. Issues to consider .....	45
3.1.3. The Questionnaire Design Process .....	47
3.1.4. More information .....	47
3.2. Households surveys .....	47
3.2.1. Strength and weaknesses .....	47
3.2.2. Survey design .....	47

3.2.3. Survey methods .....	49
3.2.4. Questionnaire design .....	50
3.2.5. Guidelines for wording survey questions .....	51
3.2.6. Interviewer training .....	52
3.2.7. Data validation .....	52
3.2.8. Survey frequency .....	52
3.2.9. Summary and conclusions .....	52
<b>3.3. Use of administrative data .....</b>	<b>52</b>
Introduction .....	52
3.3.1. Strengths and weaknesses of using administrative data .....	53
3.3.2. Examples of energy-relevant administrative data .....	54
3.3.3. Producing statistics from an administrative data source .....	55
3.3.4. Quality and accuracy issues .....	57
3.3.5. Adding information from other registers: Data matching .....	57
3.3.6. Summary and conclusions .....	58
<b>3.4. Modelling .....</b>	<b>58</b>
Introduction .....	58
3.4.1. Strength and weaknesses .....	58
3.4.2. Types of and typical cases for modelling .....	58
3.4.3. Typical model assumptions .....	59
3.4.4. Risks .....	59
3.4.5. Summary and conclusions .....	60
<b>3.5. In situ measurements .....</b>	<b>60</b>
Introduction .....	60
3.5.1. Strength and weakness .....	61
3.5.2. Previous experiences with <i>in situ</i> measurements .....	61
3.5.3. Methodological issues for <i>in situ</i> measurement of electricity use in the household sector .....	62
3.5.4. Methodological issues for <i>in situ</i> measurement of household temperatures and thermal properties of buildings .....	66
3.5.5. Summary and conclusions .....	68
<b>Chapter 4: Practical examples of methods .....</b>	<b>69</b>
Introduction .....	71
<b>4.1. Business surveys .....</b>	<b>71</b>
4.1.1. United Kingdom good practice examples .....	71
<b>4.2. Households surveys .....</b>	<b>72</b>
4.2.1. Face to face Survey in the frame of the SECH-SPAHOUSECH project (Spain) .....	72
4.2.2. Mail survey: Electricity and natural gas consumption of households by purpose (Austria) .....	72
4.2.3. CATI/CAPI survey: Energy consumption of households (Slovenia) .....	76
4.2.4. Panel survey: Energy consumption of private households (Germany) .....	77
4.2.5. Interviewer training (United Kingdom) .....	78
<b>4.3. Administrative data .....</b>	<b>79</b>
4.3.1. Client registers of energy companies in the Netherlands .....	79
4.3.2. Administrative data from energy companies: experience from other countries .....	84

<b>4.4. Modelling</b> .....	90
4.4.1. The Cambridge Housing Model (United Kingdom) .....	90
4.4.2. Model based data validation procedure (Austria) .....	91
4.4.3. Model based Estimation of Energy Consumption in Second Residences (Austria) .....	93
<b>4.5. In situ measurements</b> .....	94
4.5.1. Good Practices on in situ electricity measurements .....	94
4.5.2. Best Practices' on in situ thermal measurements .....	100
<b>Chapter 5: Country case studies</b> .....	103
Introduction .....	105
5.1. Country case study: Austria .....	105
5.2. Country case study: Germany .....	108
5.3. Country case study: The Netherlands .....	112
5.4. Country case study: Poland .....	114
5.5. Country case study: Slovenia .....	118
5.6. Country case study: Spain .....	122
5.7. Country case study: United Kingdom .....	124
<b>Chapter 6: Going beyond the regulation</b> .....	127
Introduction .....	129
6.1. Definition of levels of coverage .....	129
6.1.1. Demographic and social variables .....	129
6.1.2. Dwelling variables .....	130
6.1.3. Energy uses .....	132
6.1.4. Energy technologies .....	132
6.1.5. Penetration of new energy efficiency technologies .....	136
<b>Chapter 7: Other issues</b> .....	139
Introduction .....	141
7.1. Renewable energy statistics .....	141
Introduction .....	141
7.1.1. Definitions .....	141
7.1.2. PV, wind, small hydro .....	142
7.1.3. Solar heat .....	142
7.1.4. Renewable heat from heat pumps .....	144
7.1.5. Solid biofuels .....	144
7.1.6. Data validation .....	146
7.1.7. Summary and conclusions .....	146
7.2. Fuel poverty .....	147
Introduction .....	147
7.2.1. Ways to measure fuel poverty .....	152
7.2.2. Next steps .....	153

7.2.3. Comparisons across Europe.....	154
7.2.4. Summary and conclusions .....	154
7.2.5. Selected other references for information .....	154
<b>7.3. Data matching .....</b>	<b>155</b>
Introduction .....	155
7.3.1. Definitions of data matching.....	155
7.3.2. Uses of matched data.....	156
7.3.3. Benefits and challenges of data matching .....	156
7.3.4. Considerations when planning to undertake data matching .....	157
7.3.5. Examples of data matching in other countries .....	158
7.3.6. Case study: The United Kingdom’s National Energy Efficiency Data-Framework.....	159
7.3.7. Data matching references .....	161
<b>Acronyms .....</b>	<b>163</b>
