Producing environmental accounts with environmentally extended input output analysis	2
Abstract.....	3
Foreword.....	3
Contents.....	4
Abbreviations.....	6
1.1. Research background.....	7
1.2 EEIO in the SEEA.....	8
1.3 Current use of EEIO analysis amongst NSOs and international organisations	8
1.4 Aim.....	11
1.5 Work process.....	11
1.6 Engagement with the EEIO subgroup.....	11
1.7 Report outline	12
2.1 Background.....	13
2.2 Methodologies	14
2.2.1 Calculation procedures.....	14
2.2.2 Input data.....	15
2.3 Output.....	16
2.3.1 Overview of published data	16
2.3.2 Example – GHG emissions from domestic final use.....	17
2.3.3 Example – GHG emissions from supply and demand in the economy	20
2.3.4 Example – Emissions by <i>purpose</i> of consumption.....	22
2.3.5 Example – domestic energy use – Eurostat.....	24
2.3.6 Published documentation and communication.....	25
3.1 Background.....	26
3.2 Methodologies	27
3.2.1 Material flow accounts in raw material equivalents – Eurostat.....	27
3.2.1.1 Calculation procedure.....	27
3.2.1.2 Source data	27
3.2.2 Waste IO model.....	28
3.2.2.1 Summary of calculation procedure	28

3.2.2.2	Source data	28
3.3	Output.....	29
3.3.1	Summary of Eurostat's data output – MFA-RME.....	29
3.3.2	Summary of the Waste Input-output model data output.....	30
3.3.3	Example: Eurostat – Domestic raw material consumption by material type	31
3.3.4	Example: Eurostat – Raw material input, raw material consumption and exports 32	
3.3.5	Example: Waste IO: Direct waste and embodied waste.....	34
3.3.6	Published documentation and communication.....	37
4.1	Methodology and data.....	38
4.2	Driving forces and barriers for EEIO-based data in the SEEA	39
4.3	Communication.....	40
4.4	Moving forward	41
