TABLE OF CONTENTS

SESSION 3: CHALLENGES AND USE OF POPULATION PROJECTIONS

INE-Spain strategy on population estimates and projections: facing the challenge of the statistical measure of population
Miguel Ángel Martínez Vidal, Sixto Muriel de la Riva – National Statistics Institute of Spain

Making use of long-term demographic projections in multilateral policy coordination in the European Union

Essay on ageing and health projections in Portugal
Filipa Castro Henriques, Teresa Ferreira Rodrigues – Universidade Nova de Lisboa, Portugal

Current status and future challenges of the national population projection in South Korea concerning super-low fertility patterns: a case study through international comparison
Kwang-Hee Jun – Chungnam National University, Republic of Korea
Seulki Choi – Seoul National University, Republic of Korea

SESSION 4: CONSTRUCTING ASSUMPTIONS FOR MORTALITY: DATA, METHODS AND ANALYSIS

Cohort and period mortality in Sweden in a very long perspective and projection strategies
Hans Lundström – Statistics Sweden

Towards advanced methods for computing life tables
Sixto Muriel de la Riva, Margarita Cantalapiedra Malaguilla, Federico López Carrión – National Statistics Institute of Spain

Estimating life expectancy in small population areas
Jorge Miguel Bravo – Universidade de Évora, Portugal
Joana Malta – Statistics Portugal

SESSION 5: CONSTRUCTING ASSUMPTIONS FOR FERTILITY: DATA, METHODS AND ANALYSIS

Trend reversal in childlessness in Sweden
Lotta Persson – Statistics Sweden

Is fertility converging across the Member States of the European Union?
Giampaolo Lanzieri – European Commission, Eurostat
Explanations for regional fertility reversal after 2005 in Japan: demographic, socio-economic and cultural factors……………………………………………………………………………………………….155
Miho Iwasawa, Ryuichi Kaneko
National Institute of Population and Social Security Research, Tokyo, Japan

SESSION 6: FORECASTING DEMOGRAPHIC COMPONENTS: FERTILITY

A probabilistic version of the United Nations World Population Prospects: methodological improvements by using Bayesian fertility and mortality projections……………………………171
Gerhard K. Heilig, Thomas Buetnner, Nan Li, Patrick Gerland, Francois Pelletier
United Nations Population Division
Leontine Alkema - National University of Singapore
Jennifer Chunn, Hana Ševčíková, Adrian Raftery - University of Washington, USA

Applying a fertility projection system to period effect analysis: an examination of the recent fertility upturn in Japan…………………………………………………………………………………185
Ryuichi Kaneko – National Institute of Population and Social Security Research, Tokyo, Japan

Forecasting the number of births in Portugal ……………………………………………………………..203
António Caleiro – Universidade de Évora, Portugal

SESSION 7: FORECASTING DEMOGRAPHIC COMPONENTS: MORTALITY

Application of age-transformation approaches to mortality projection for Japan …………217
Futoshi Ishii – National Institute of Population and Social Security Research, Tokyo, Japan

Lee-Carter mortality projection with "Limit Life Table" ………………………………………………….231
Jorge Miguel Bravo – University of Évora, Portugal

Mortality projections in Portugal ……………………………………………………………………….241
Edviges Coelho, Maria da Graça Magalhães – Statistics Portugal
Jorge Miguel Bravo – University of Évora, Portugal

SESSION 8: CONSTRUCTING ASSUMPTIONS FOR MIGRATIONS: DATA, METHODS AND ANALYSIS

International migration data as input for population projections…………………………………255
Anne Herm, Michel Poulain – Estonian Interuniversity Population Research Centre and Université Catholique de Louvain, Belgium

Prospective immigration to Israel through 2030: methodological issues and challenges……………………………………………………………………………………….269
Sofia Phren, Nitzan Peri – Central Bureau of Statistics, Israel

SESSION 9: FORECASTING DEMOGRAPHIC COMPONENTS: MIGRATION

Dealing with uncertainty in international migration predictions: from probabilistic forecasting to decision analysis…………………………………………………………281
Jakub Bijak – University of Southampton, United Kingdom
Model to forecast the re-immigration of Swedish-born persons. Christian Skarman, Stina Andersson, Anders Ljungberg – Statistics Sweden

The role of social networks in the projection of international migration flows: an Agent-Based approach. Carla Anjos – University of Aveiro, Portugal
Pedro Campos - Statistics Portugal and University of Porto, Portugal

Forecasting migration flows to and from Norway using an econometric model. Helge Brunborg, Ådne Cappelen - Statistics Norway

SESSIONS 10: SMALL POPULATION AND SUB-NATIONAL POPULATION PROJECTIONS

How to deal with sub-national forecasts in spatially very heterogeneous countries? Towards using some spatial theories and models. Branislav Bleha – Comenius University, Bratislava, Slovakia
Boris Váňo – Demographic Research Centre, Institute of Informatics and Statistics, Slovakia

The problematic of population projections in small island states: the case of Cape Verde. Pedro Moreno de Brito – Universidade Nova de Lisboa, Portugal
Teresa Rodrigues – Institute of Statistics and Information Management Systems, Portugal

Using national data to obtain small area estimators for population projections on sub-national level. Michael Franzén, Therese Karlsson - Statistics Sweden

Austrian Regional Population Projections below NUTS-3. Alexander Hanika – Statistics Austria

Sub-national and foreign-born population projections: the case of Andalusia. Juan Antonio Hermández, Silvia Bermúdez, Joaquín Planelles – Instituto de Estadística de Andalucía, Spain

SESSION 11: BEYOND POPULATION PROJECTIONS BY AGE AND SEX

New projections of the ethnocultural composition of the Canadian population using the Demosim microsimulation model. Éric Caron Malenfant, Laurent Martel, André Lebel – Statistics Canada

Tertiary education enrolment trends and projections in Latvia. Zane Cunska - University of Latvia

Projecting race and Hispanic origin in the U.S. population projections and an examination of the impact of net international migration. David G. Waddington, Victoria A. Velkoff – U.S. Census Bureau
SESSION 12: STOCHASTIC TECHNIQUES FOR DEMOGRAPHIC PROJECTIONS

Combining deterministic and stochastic population projections ........................................ 485
Salvatore Bertino, Eugenio Sonnino - University of Rome “La Sapienza”, Italy
Giampaolo Lanzieri – European Commission, Eurostat

A mate-matching algorithm for continuous-time microsimulation models .................. 491
Sabine Zinn – Max Planck Institute for Demographic Research Rostock, Germany

Bayesian population forecasts for England and Wales .................................................... 511
Guy Abel, Jakub Bijak, Jonathan Forster, James Raymer, Peter W. F. Smith
University of Southampton, United Kingdom

Practical population forecasting by microsimulation: application of the MicMac software ................................................................. 525
Ekaterina Ogurtsova, Jutta Gampe, Sabine Zinn – Max Planck Institute for Demographic Research Rostock, Germany

SESSION 13: STOCHASTIC NATIONAL DEMOGRAPHIC PROJECTIONS

Immigration, ethnocultural diversity and the future composition of the Canadian labour force ................................................................. 543
Alain Bélanger – Institut National de la Recherche Scientifique, Canada
Nicolas Bastien – Centre Urbanisation Culture Société, Canada

Developing stochastic population forecasts for the United Kingdom:
Progress Report and plans for future work ................................................................. 557
Emma Wright, Steve Rowan – Office for National Statistics, United Kingdom
