Eurostat is the Statistical Office of the European Communities. Its mission is to provide the European Union with high-quality statistical information. For that purpose, it gathers and analyses figures from the national statistical offices across Europe and provides comparable and harmonised data for the European Union to use in the definition, implementation and analysis of Community policies. Its statistical products and services are also of great value to Europe's business community, professional organisations, academics, librarians, NGOs, the media and citizens.

Eurostat's publications programme consists of several collections:

- **News releases** provide recent information on the Euro-Indicators and on social, economic, regional, agricultural or environmental topics.
- **Statistical books** are larger A4 publications with statistical data and analysis.
- **Pocketbooks** are free of charge publications aiming to give users a set of basic figures on a specific topic.
- **Statistics in focus** provides updated summaries of the main results of surveys, studies and statistical analysis.
- **Data in focus** present the most recent statistics with methodological notes.
- **Methodologies and working papers** are technical publications for statistical experts working in a particular field.

Eurostat publications can be ordered via the EU Bookshop at <http://bookshop.europa.eu>.

All publications are also downloadable free of charge in PDF format from the Eurostat website <http://ec.europa.eu/eurostat>. Furthermore, Eurostat's databases are freely available there, as are tables with the most frequently used and demanded short- and long-term indicators.

Eurostat has set up with the members of the 'European statistical system' (ESS) a network of user support centres which exist in nearly all Member States as well as in some EFTA countries. Their mission is to provide help and guidance to Internet users of European statistical data. Contact details for this support network can be found on Eurostat Internet site.

Preliminary remarks

Introduction

Eurostat's data-base¹⁾ on fishery statistics contains data on fishery catches, landings of fishery products, aquaculture production and fishing fleets.

This publication is intended to summarise the fisheries data for the period 1995-2008 for:

- EU-27 Member States: Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Romania, Slovak Republic, Slovenia, Spain, Sweden and the United Kingdom.
- EU Candidate Countries: Croatia, FYR of Macedonia and Turkey.
- Iceland and Norway.

Data sources

Eurostat's programme of fishery statistics includes collaboration with other international organisations with responsibilities for fishery statistics. This collaboration is co-ordinated through the Co-ordinating Working Party on Fishery Statistics (CWP). Eurostat gratefully acknowledges this contribution to its programme of work.

While every effort has been made to provide complete, comparable and harmonised data in all topics covered in the data-base and in this publication, attention is drawn to the following notes which briefly indicate the definitions used in each of the topics covered and where care has to be exercised in the use of the data.

(¹) Eurostat's databases are available free of charge through the Eurostat internet site: <http://ec.europa.eu/eurostat>

Total production

Total production is the sum of the total catches and aquaculture production. See below for the notes on these two components of total production.

Total production is recorded in the live weight equivalent of the production (for aquaculture) or of the landings (for catches).

Aquaculture production

Aquaculture means the farming of aquatic organisms including fish, molluscs, crustaceans, aquatic plants and other aquatic organisms. It includes capture-based aquaculture and the production of aquatic organisms which are harvested by an individual or corporate body which has owned them throughout their rearing period. It excludes aquatic organisms which are exploited by the public as a common property resource: these are the harvest of fisheries.

Farming means some form of intervention in the rearing process to enhance production, such as regular stocking, feeding and protection from predators and involves individual or corporate ownership of the stock being cultivated. Capture-based aquaculture means the practice of collecting “seed” material, from early life stages to adults, from the wild and subsequent on-growing to marketable size using aquaculture techniques

The national authorities of EEA countries submit aquaculture production data to Eurostat under the terms of:

Regulation (EC) no. 762/2008 of 9 July 2008 on the submission by Member States of statistics on aquaculture and repealing Council Regulation (EC) 788/96 (*OJ L218 of 13.08.2008*).

Regulation (EC) no. 788/96 of 22 April 1996 on the submission by Member States of statistics on aquaculture production (*OJ L108 of 01.05.1996*).

FAO receives aquaculture production data from national authorities on the FISHSTAT AQ questionnaire. This questionnaire uses the same concepts and definitions as the EU legislation and the data from the two sources are comparable. The FAO Fisheries Department performs a check on the quality of the data and makes the results available to Eurostat for inclusion in its data-base.

The data are recorded in the live weight equivalent of the product weight.

Catch

Catch statistics are submitted to Eurostat by EEA member countries in compliance with the following EU legislation:

Regulation (EC) No 218/2009 of 11 March 2009 on the submission of nominal catch statistics by Member States fishing in the North-East Atlantic (*OJ L87 of 31.03.2009*).

Regulation (EC) No 217/2009 of 11 March 2009 on the submission of catch and activity statistics by Member States fishing in the North-West Atlantic (*OJ L87 of 31.03.2009*).

Regulation (EC) No 216/2009 of 11 March 2009 on the submission of nominal catch statistics by Member States fishing in certain areas other than those of the North Atlantic (*OJ L87 of 31.03.2009, p.1*).

The regional organisations and FAO make the data for non-EEA countries available to Eurostat.

The national authorities are requested to submit catch statistics for all commercial, subsistence and recreational fisheries. However the reporting of data for recreational fisheries is known to be incomplete.

The data are reported as the live weight equivalent of the landings (i.e. the landed weight of a product to which an appropriate

conversion factor has been applied). The data therefore exclude quantities of fishery products which are caught but not landed. For example, fish caught but rejected at sea (a non-commercial species, under-sized fish, etc) or fish consumed on board the vessel.

The flag of the fishing vessels is used as the primary indication of the nationality of the catch, though this concept may be varied in certain circumstances (for example, in the case of joint ventures and chartering of vessels).

Landings

Each EEA member country reports annual data on the quantities and values of fishery products landed in its ports under the terms of:

Regulation (EC) 1921/2006 of 18 December 2006, on the submission of statistical data on landings of fishery products in Member States and repealing Council Regulation (EEC) 1382/91 (*OJ L403 of 30.12.2006*).

The data are the landings (expressed as the product weight) of all fishery products in the reporting country, regardless of the nationality of the vessel making the landings. Landings by vessels of the reporting country in foreign ports are excluded.

Fishing fleet

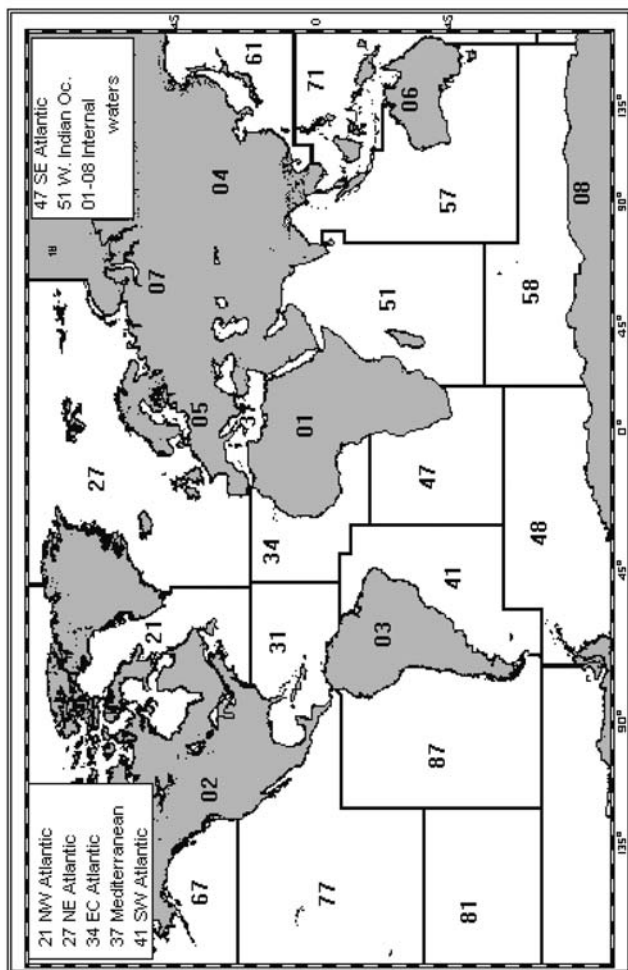

The data for EU Member States are derived from the Community Fishing Fleet Register maintained by the European Commission's Directorate-General for Fisheries and Maritime Affairs.

Data for Iceland and Norway are compiled from fleet files submitted by the national authorities.

Gross Tonnage (GT) under the London Convention (1969) was adopted as the unit of tonnage measurement in the 1990s. This was a change from the previously used Gross Registered Tonnage

(GRT) under the Oslo Convention (1946). Implementation of the change involved re-measurement of vessels over time. This was carried out at different rates in different countries and was largely complete by 2003. However care should be taken when comparing data between countries and over time since the GT of a vessel is generally significantly greater than the GRT.

* 2006-data have been used for Poland (and hence EU-27 total) for 2007

Contents of Eurostat's data-base of fishery statistics

Sector:	Total Production (= Catch + Aquaculture Production)
Years:	1950 onwards
Periodicity:	annual
Species:	individually identified species
Areas:	by major fishing areas
Countries:	EU members, EU-candidate countries, Iceland, Norway
Unit:	tonnes live weight
Data Source :	Eurostat; For fishing areas, countries and years not covered by EU legislation, FAO.

Four Member States (Denmark 11%, Spain 16%, France 12%, and the United Kingdom 12%) accounted for 51% of the EU-27 total fisheries production in 2007.

The EU-27 production in 2007 was 31% less than in 1995.

Total fisheries production includes aquaculture production. Aquaculture production data for 2008 is not available until end December 2009. Therefore the total fisheries production of all fishery products can not be calculated for 2008.

Contents of Eurostat's data-base of fishery statistics

Sector:	Catches Northwest Atlantic (Major Fishing Area 21)
Years:	1950 onwards
Periodicity:	annual
Species:	individually identified species by NAFO divisions and sub-divisions (1960 onwards) and by major fishing area (1950 onwards)
Areas:	(1950 onwards)
Countries:	EU members, EU-candidate countries, Iceland, Norway
Unit:	tonnes live weight
Data source:	Eurostat; For fishing areas, countries and years not covered by EU legislation, NAFO and FAO.

Due to the restriction of EU fishing to international waters and the imposition of stringent management measures, the EU-15 catch in the Northwest Atlantic is under 5% of the 1.2 million tonnes caught in 1968.

16% of the EU-15 catches from all areas were taken in the Northwest Atlantic in 1968. In recent years this has fallen to under 1%.

Three Member States (Estonia 24%, Spain 35% and Portugal 23%,) accounted for 81% of EU-27 catches in 2008.

Contents of Eurostat's data-base of fishery statistics

Sector:	Catches Northeast Atlantic (Major Fishing area 27)
Years:	1950 onwards
Periodicity:	annual
Species:	individually identified species.
Areas:	by ICES divisions and sub-divisions (1973 onwards) and by major fishing area (1950 onwards)
Countries:	all countries reporting catches in the area
Unit:	tonnes live weight
Data source:	Eurostat; For fishing areas, countries and years not covered by EU legislation, ICES and FAO.

The Northeast Atlantic is the most important fishing area for the EU-27 Member States with 73% of their catches being taken from this area in 2007.

EU-27 accounted for 41% of the total catch in the area in 2008. Iceland and Norway were the other main fishing nations (43% of the total for the area).

Four Member States (Denmark 20%, Spain 10%, France 10% and the UK 16%) accounted for 56% of the EU-27 catches in 2008.

In the period 1995-2008 EU-27 catches in the Northeast Atlantic has fallen by around 40%, the combined catch of Iceland and Norway by 11% and the total world catch by 23%.

Contents of Eurostat's data-base of fishery statistics

Sector:	Catches Southwest Atlantic (Major Fishing Area 41)
Years:	1950 onwards
Periodicity:	annual
Species:	individually identified species
Areas:	for the major fishing area
Countries:	EU members, EU-candidate countries, Iceland, Norway
Unit:	tonnes live weight
Data source:	Eurostat; For fishing areas, countries and years not covered by EU legislation, FAO.

Less than 2% of EU-27 catches were taken from the Southwest Atlantic in 2007.

57% of the EU catch was caught by Spain with France (12%), PRT (17%) and the UK (14%) accounting for the remainder of the EU catches.

In the period 1990-2008 the EU-27 catch decreased by 88%. A major cause of this was the virtual withdrawal of the new Member States (Bulgaria, Estonia, Latvia, Lithuania and Poland) from the fisheries of the area.

Contents of Eurostat's data-base of fishery statistics

Sector:	Catches Southeast Atlantic (Major Fishing Area 47)
Years:	1950 onwards
Periodicity:	annual
Species:	individually identified species
Areas:	by ICSEAF divisions and sub-divisions (from 1975) and by major fishing area (from 1950)
Countries:	EU members, EU-candidate countries, Iceland, Norway
Unit:	tonnes live weight
Data source:	Eurostat; For fishing areas, countries and years not covered by EU legislation, ICSEAF and FAO.

Less than 1% of EU-27 catches were taken from the Southeast Atlantic in 2007.

Only three Member States (Spain, Portugal and the UK) fished in the area in 2008, with Spain accounting for 99% of the EU catches.

As regard to the important increase between 2007 and 2008 Catches for Spain, figures were confirmed by the official sources; one explanation is an important shift of catches activities from area 51 to area 47.

Contents of Eurostat's data-base of fishery statistics

Sector:	Catches in inland waters (Major Fishing Areas 01-08)
Years:	1950 onwards
Periodicity:	annual
Species:	individually identified species
Areas:	all Inland Waters combined
Countries:	EU members, EU-candidate countries, Iceland, Norway
Unit:	tonnes live weight
Data source:	Eurostat; For fishing areas, countries and years not covered by EU legislation, FAO.

In 2007 EU-27 catches from inland waters accounted for only 2% of the catches from all EU-27 fisheries.

The contribution of the 12 new Member States to the EU-27 total from inland fisheries (37%) was relatively high compared with their contribution to the catches from marine areas (12%).

Contents of Eurostat's data-base of fishery statistics

Sector:	Fishing fleet
Years:	from 1990 at the earliest
Periodicity:	annual
Parameters:	by tonnage, length, power and age classes
Countries:	EU members, Iceland, Norway
Unit:	Number, total Tonnage (tonnes GRT and/or GT) and total Power (kW)
Data source:	Eurostat (data are derived from DG MARE's Community Fishing Fleet Register)

Of the EU Member States, Greece has the largest number of fishing vessels. However on average these vessels are small compared with the vessels from most of the other countries.

In 2008 Greece(21%), Spain (13%) and Italy(16%) had the largest number of fishing vessels of the EU-27 Member States. The biggest total power had Spain(15%), France(16%), and Italy(17%). The biggest total tonnage had Spain (25%).

In the period 1995 to 2008 the EU-15 fishing fleet has decreased by 25% in number, by 19% in total tonnage and by 22% in total power.

Publications for sale:

- via EU Bookshop (<http://bookshop.europa.eu>);
- from your bookseller by quoting the title, publisher and/or ISBN number;
- by contacting one of our sales agents directly. You can obtain their contact details on the Internet (<http://bookshop.europa.eu>) or by sending a fax to +352 2929-42758.

Free publications:

- via EU Bookshop (<http://bookshop.europa.eu>);
- at the European Commission's representations or delegations. You can obtain their contact details on the Internet (<http://ec.europa.eu>) or by sending a fax to +352 2929-42758.

Fishery statistics

Data 1995–2008

This publication contains summary tables on fishery statistics for EEA Member States and EU candidate countries.

It gives an overview of the data currently available in Eurostat's database on fisheries statistics and presents data on the total fisheries production, on aquaculture production, on catches by fishing region, on landings in EEA ports and on the EEA fishing fleet.

The data are derived from official national sources and in the case of non-EEA countries from international organisations. In general, they use internationally agreed concepts and definitions developed by the Coordinating Working Party on Fishery Statistics (CWP).
