Data completeness – rate (Concept 12.3.1.)

Definition: ratio of the number of data cells provided to the number of data cells required by Eurostat

For TEC data, this indicator corresponds to the ratio of the number of datasets provided to the number of datasets required.

A distinction should be introduced between datasets to be mandatorily provided and datasets for which the transmission to Eurostat is optional. From 2022 reference period all datasets are mandatory.

TABLE 2 LIST OF DATASETS TO BE PROVIDED AND THEIR MANDATORY/OPTIONAL STATUS

Online data code in Data Browser	Dataset description	Mandatory/optional status
ext_tec06	Trade by type of trader	Mandatory
ext_tec01	Trade by activity sector and enterprise size class	Mandatory
ext_tec02	Concentration of trade by activity	Mandatory
ext_tec03	Trade by partner country and activity	Mandatory
ext_tec04	Trade by number of partner countries and activity	Mandatory
ext_tec05	Trade by commodity and activity	Mandatory
ext_tec07	Trade by type of ownership	Mandatory since reference year 2022, optional before
ext_tec08	Trade by export intensity	Mandatory since reference year 2022, optional before
ext_tec09	Trade by activity sector	Mandatory since reference year 2022, optional before
ext_tec10	Trade by partner country and size class	Mandatory since reference year 2022, optional before

Nota Bene: In addition to the datasets described just above, reporting countries should also provide an additional dataset including information on the reference populations and used for the validation of data before dissemination.

Unit non-response – rate (Concept 13.3.3.1.)

Definition: the ratio of the number of units with no information or not usable information to the total number of in-scope (eligible) units.

For TEC data, this indicator corresponds to the matching rate between trade and business registers.

Item non-response – rate (Concept 13.3.3.2.)

Definition: the ratio of the in-scope (eligible) units which have not responded to a particular item and the in-scope units that are required to respond to that particular item.

For TEC, the item non-response is computed for several business characteristics:

- The NACE activity,
- The enterprise size class, and
- The type of control.

Item non-response is also computed for the following trade characteristics:

- The intra-EU partner country,
- The extra-EU partner country,
- The number of partner country,
- The export intensity.

For each of these characteristics, the share of enterprises for which the information is unknown is calculated as well as the associated share of trade.
