

Revision reports

International Trade-in-Goods Statistics, like many other published statistics, must balance the need for timely information with the accuracy of that information. As a result, data on trade in goods are frequently revised after their first publication.

Member States must transmit revisions to Eurostat as soon as possible to ensure that the most up to date data are published. The European Business Statistics (EBS) legislation¹ covering trade in goods statistics specifies: 'When monthly results already provided to the Commission (Eurostat) are subject to revision, Member States shall provide the revised results no later than the month following availability of revised data'.

Which revision indicators do we publish?

The metadata in this report include information on revisions in terms of value change and percentage change. Both are useful complementary measures for the users of trade in goods statistics.

Measuring the percentage change informs users on the impact of changes on individual Member States data.

Measuring the value change allows users to learn about the impact of changes in large and small economies on EU and EA (euro area) aggregate figures.

What is the importance of revisions?

International trade in goods data are published monthly and rely on a number of data sources, all of which may be subject to change.

Most revisions improve the quality of the data by correcting erroneous values or replacing estimated data with data collected from enterprises. Sometimes older data are revised to reflect a new and better adapted compilation method. However, as a principle, data should not be systematically revised by large values after their initial release.

In all cases users should be informed when a large revision has taken place.

What is a large revision?

The definition of a 'large' revision depends on the type of data user.

To make it easier for users to monitor the revisions and understand their impact, Eurostat and the Member States have agreed on thresholds defining different levels of revisions. The thresholds provide information on changes between subsequent data publications as well as between the first and latest data release.

The following section explains how revisions are classified: level 2 revisions are the largest, while those at level 0 are the smallest. Revision levels are not shown at EU level, as this may hide increases and decreases in individual Member States' revisions, which balance out at the aggregate level.

Technical note on revision rates based on first – last available submission

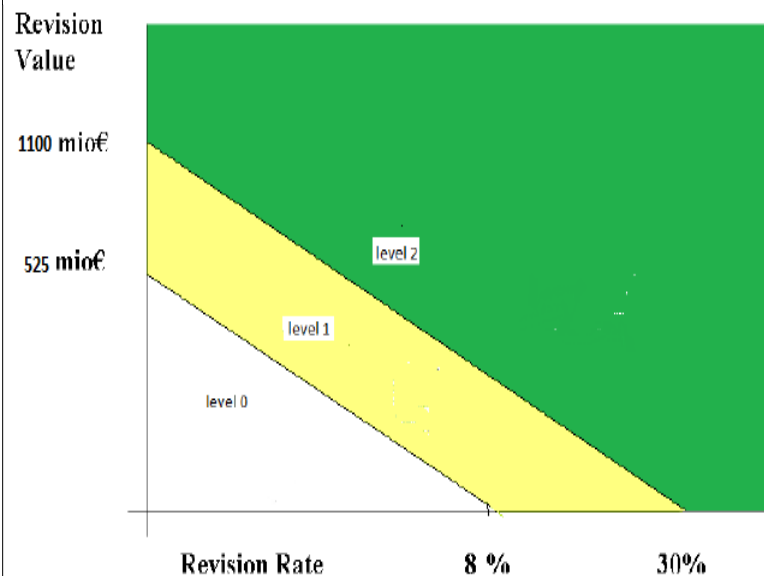

Revision levels are calculated for each Member State on total imports/exports for intra/extra-EU trade and intra/extra-EA trade. First submitted values of the time series are compared to the last available submitted ones according to the formulas below :

Revision rate = absolute ((last_available_value – first_value) / first_value) % (national impact)

Revision value = absolute (last_available_value – first_value) (EU impact)

The revision levels are classified with the help of the diagram below and on the basis of the calculated revision rates and values.

Important revisions at detailed product or partner level as well as positive and negative previous subsequent revisions might not be visible in totals.

EU27 (from 2020) includes Belgium, Bulgaria, Czechia, Denmark, Germany, Estonia, Ireland, Greece, Spain, France, Croatia, Italy, Cyprus, Latvia, Lithuania, Luxembourg, Hungary, Malta, the Netherlands, Austria, Poland, Portugal, Romania, Slovenia, Slovakia, Finland and Sweden.

EA20 (from 2023) includes Belgium, Germany, Estonia, Ireland, Greece, Spain, France, Croatia, Italy, Cyprus, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Austria, Portugal, Slovenia, Slovakia and Finland.
