COMMISSION STAFF WORKING PAPER

**Eurostat Report on
the 2021 annual update of remuneration and pensions of EU officials**

**in accordance with Articles 64 and 65 and Annexes XI and X of the Staff Regulations
applicable to officials and other servants of the European Union**

**adjusting with effect from 1 July 2021 the remuneration of active staff and the pensions
of retired staff,**

**and updating with effect from 1 July 2021 the correction coefficients applied to the
remuneration of active staff serving in Intra-EU and Extra-EU duty stations, to the
pensions of retired staff according to their country of residence, and for pension
transfers.**

Main text

Eurostat Report on the annual update of remuneration and pensions of EU officials

Global specific indicator; control indicators;
changes in the cost of living;
correction coefficients

Reference period:
Year to 1 July 2021

EXECUTIVE SUMMARY

In accordance with the Articles 64 and 65 and Annex XI of the Staff Regulations applicable to officials and other servants of the European Union and the special provisions in Annex X applicable to officials serving in a third country, as supplemented by procedural manuals adopted by the Working Group on Articles 64 & 65 of the Staff Regulations which meets annually in Luxembourg¹, and with other applicable legislation and international agreements, Eurostat hereby presents its report for the twelve months to July 2021.

This is the eighth annual report submitted in accordance with the EU Staff Regulations as amended by Regulation 1023/2013.

Since the previous annual report, an interim report was submitted for Intra-EU staff and pensioners in May 2021 and interim reports for Extra-EU staff were submitted in May 2021 and October 2021.

This annual report presents the following information for the period July 2020 – July 2021:

- specific indicators of the evolution of the purchasing power of salaries of national officials;
- average change in the purchasing power of salaries of national officials (global specific indicator);
- control indicators, for comparative purposes;
- change in the cost of living in Belgium and Luxembourg (Joint Index);
- correction coefficients for staff working outside Brussels in Intra-EU duty stations;
- correction coefficients for pensioners living outside Belgium;
- correction coefficients for staff working outside Brussels in Extra-EU duty stations.

The specific indicators of the evolution of the purchasing power of national officials in the 10 sample Member States for the period July 2020 – July 2021 are provided in **Table 1**.

On this basis, the global specific indicator in real terms (weighted average using percentage share of EU GDP expressed in PPS terms) for the period July 2020 – July 2021 is 99.8 (-0.2%).

As this calculated global specific indicator is negative, the exception clause does not apply².

As the calculated specific indicator does not exceed the specified $\pm 2.0\%$ threshold, the moderation clause does not apply for the current exercise.

The published real GDP decrease for the EU for 2020 is -5.9%. Although smaller than the negative GDP forecast which was used in the previous Annual Report (-8.3%), it nevertheless

¹ Exceptionally, due to the COVID-19 pandemic, the scheduled physical meeting in March 2021 was organised as an electronic meeting instead.

² It can be noted here that if the calculated specific indicator was positive, because the forecast evolution of GDP in real terms for 2021 is positive, the exception clause would still not apply

confirms that the magnitude of the decrease exceeds -3.0%. Consequently, no retroactive correction is required to the suspension of the specific indicator component of the annual update for July 2020.

Combining the -5.9% GDP movement established for 2020 with the +4.8% GDP forecast for 2021, it is apparent that the cumulative total is insufficient to reach the same level as before (i.e. 2019). On this basis, there will be no unwinding of the suspended 2020 payment as part of the 2021 annual update.

For the same period July 2020 – July 2021, the Joint Belgium-Luxembourg Index (used to measure the change in the cost of living for the EU officials in Brussels) is 102.1 (+2.1%). Details are provided in **Table 3**.

Consequently, the adjustment of the nominal net remuneration of active European officials in Brussels and Luxembourg, and of the nominal pensions of retired European officials in Belgium and Luxembourg, which is necessary to maintain a parallel development of purchasing power with the national civil servants in the Member States is equal to +1.9% (101.9).

The correction coefficients which apply to remuneration outside Brussels and Luxembourg with effect from 1 July 2021 in order to maintain equality of purchasing power, are provided in **Tables 5 and 9** for staff serving in Intra-EU and Extra-EU duty stations respectively.

The correction coefficients which apply to pensions outside Belgium and Luxembourg with effect from 1 July 2021 in order to maintain equality of purchasing power, are provided in **Table 7**.

All figures and calculations contained in this report relating to specific indicators are based on data supplied by the responsible authorities in the Member States. Information about the evolution of purchasing power of national officials was requested in accordance with procedures agreed at the Working Group on Articles 64 & 65 of the Staff Regulations. Data for 7 Member States was compiled in collaboration with the International Service for Remunerations and Pensions of the Coordinated Organisations, following an initial request which was issued in April 2021. Data for the remaining 20 Member States was requested during June 2021. In both cases the target reply deadline for transmission of finalised data was 31 July. Completed 2021 remuneration questionnaires were received from all Member States, allowing the calculation of a specific indicator in combination with data provided for 2020. For the current annual exercise, the official forecast figure supplied in March 2021 was not used for any Member State³.

With the exception of the information about consumption expenditure pattern data which is compiled by Eurostat from direct surveys of staff, and a direct survey of international schools, all calculations and figures presented in this report relating to Intra-EU correction coefficients are based on data supplied by the responsible national authorities. Corresponding data for Extra-EU duty stations is obtained from responsible national authorities coordinated by Eurostat under the European Comparison Programme (ECP), or through collaboration with the International Service for Remunerations and Pensions of the Coordinated Organisations (CO.ISRP) and the United Nations International Civil Service Commission (UN.ICSC).

³ For the 2020 annual exercise, the official forecast was used for 1 Member State: Romania

Important note: the United Kingdom left the European Union with effect from 1 February 2020. The transition period introduced by the Withdrawal Agreement expired with effect from 31 December 2020 following signature of the Trade and Cooperation Agreement. This has had important implications for the calculation of the global specific indicator and for the calculation of correction coefficients. For staff correction coefficient purposes, the United Kingdom is now treated as an Extra-EU country. Exceptionally, production and publication of correction coefficient for existing UK pensioners continues. For specific indicator calculation purposes, the United Kingdom is no longer included in the core sample of Member States.

More information about methodology, detailed results and statistical analyses is made available in the appendices to this report. Additional information can be found in detailed procedural manuals. INTRODUCTION

Eurostat hereby presents its report for the twelve months to July 2021. This is the eighth annual report submitted in accordance with the EU Staff Regulations as amended by Regulation 1023/2013⁴.

Annex XI of the Staff Regulations describes rules for implementing Articles 64 and 65 of the Staff Regulations, i.e. the method for the annual adjustment of remuneration and pensions of European officials and other servants of the European Union. These rules are supplemented by special provisions in Annex X applicable to officials serving in a third country, and other relevant legislation and international agreements⁵. Various procedural manuals to implement these rules have been developed by the Working Group on Articles 64 & 65 of the Staff Regulations which meets annually in Luxembourg⁶.

This annual report⁷ presents the following information for the period July 2020 – July 2021:

- specific indicators of the evolution of the purchasing power of salaries of national officials;
- average change in the purchasing power of salaries of national officials (global specific indicator);
- control indicators, for comparative purposes;
- change in the cost of living in Belgium and Luxembourg (Joint Index);
- correction coefficients for staff working outside Brussels in Intra-EU duty stations;
- correction coefficients for pensioners living outside Belgium;
- correction coefficients for staff working outside Brussels in Extra-EU duty stations.

⁴ Regulation (EU, Euratom) No. 1023/2013 of the European Parliament and of the Council of 22 October 2013 amending the Staff Regulations of Officials of the European Union and the Conditions of Employment of Other Servants of the European Union, published in Official Journal L.287/15 dated 29.10.2013

⁵ These include the Statistical Law (223/2009); the PPP Regulation (1445/2007); the HICP Regulation (2494/1995 et seq); the GDP Regulation (ESA95: 2223/1996, ESA2010: 549/2013); the Transparency Regulation (1049/2001); the 2009 trilateral international memorandum of understanding (Eurostat / UN International Civil Service Commission / International Service for Remuneration and Pensions of the Coordinated Organisations); the ILO 1973 Resolution on household surveys; the LFS Regulation (577/1998); the SES and LCS Regulation (530/1999).

⁶ These include: document A6465/14/26rev4 “Methodology for the calculation of specific indicators and control indicators” (version March 2020); document A6465/14/58rev2 “Methodology for the calculation of the Joint Index” (version March 2020); document A6465/14/59rev4 “Methodology for the calculation of Intra-EU correction coefficients” (version July 2020); document A6465/14/60rev4 “Methodology for the calculation of Extra-EU correction coefficients” (version April 2020); documents A6465/21/07 and /11 “Education data collection 2021” and “Education PPP test calculations”; documents A6465/21/06 and /08 “Estate agency rent surveys for 2021” and “Alternative data collection for rent surveys”; document A6465/21/09 “Staff Housing Survey 2021”; document A6465/21/10 “[Experimental] out-of-area correction coefficients”; document A6465/21/17 “Terms of Reference and Rules of Procedure” (version July 2021).

Exceptionally, due to the COVID-19 pandemic, the scheduled physical meeting in March 2021 was organised as an electronic meeting instead.

⁷ Since the previous annual report, an interim report covering Intra-EU staff and pensioners for the period 1 July 2020 - 1 January 2021 was prepared in May 2021 with reference Ares(2021)3465742; an interim report covering Extra-EU staff for the six months August 2020 - January 2021 was prepared in May 2021 with reference Ares(2021)3005164. An interim report covering Extra-EU staff for the five months February 2021 - June 2021 was prepared in October 2021 with reference Ares(2021)6358373.

Chapters 1 to 6 of this report examine respectively:

- Evolution of the purchasing power of salaries of national officials in the central governments;
- Comparative information drawn from various sources;
- Changes in the cost of living in Belgium and Luxembourg;
- Update of remuneration in Brussels and Luxembourg and of pensions in Belgium and Luxembourg;
- Application of moderation and exception clauses.

Chapters 7 to 10 of this report examine respectively:

- Update of remuneration and pensions outside Belgium and Luxembourg;
- Economic parities between Brussels and other locations outside Belgium and Luxembourg, for staff (Intra-EU);
- Economic parities between Belgium and other Member States, for pensioners;
- Economic parities between Brussels and locations outside the European Union, for staff (Extra-EU).

All figures and calculations contained in this report relating to **specific indicators** are based on data supplied by the responsible authorities in the Member States⁸. Information about the evolution of purchasing power of national officials was requested in accordance with procedures agreed at the Working Group on Articles 64 & 65 of the Staff Regulations. Data for 7 Member States was compiled in collaboration with the International Service for Remunerations and Pensions of the Coordinated Organisations, following an initial request which was issued in April 2021. Data for the remaining 20 Member States was requested during June 2021. In both cases the target reply deadline for transmission of finalised data was 31 July. Completed 2021 remuneration questionnaires were received from all Member States, allowing the calculation of a specific indicator in combination with data provided for 2020. For the current annual exercise, the official forecast figure supplied in March 2021 was not used for any Member State. For the previous annual exercise, the forecast was used for 1 Member State (Romania).

With the exception of the information about consumption expenditure pattern data which is compiled by Eurostat from direct surveys of staff, and a direct survey of international schools, all calculations and figures presented in this report relating to **correction coefficients** are based on Intra-EU data supplied by the responsible national authorities. Corresponding data for Extra-EU duty stations is obtained from responsible national authorities coordinated by Eurostat under the European Comparison Programme (ECP), or through collaboration with the International Service for Remunerations and Pensions of the Coordinated Organisations (CO.ISRP) and the United Nations International Civil Service Commission (UN.ICSC).

Important note: the United Kingdom left the European Union with effect from 1 February 2020. The transition period introduced by the Withdrawal Agreement expired with effect from 31 December 2020 following signature of the Trade and Cooperation Agreement. This has had important implications for the calculation of the global specific indicator and for the

⁸ Important note: a sample of 10 Member States applies. Information for EU total continues to be compiled for comparative purposes.

calculation of correction coefficients. For staff correction coefficient purposes, the United Kingdom is now treated as an Extra-EU country. Exceptionally, production and publication of correction coefficient for existing UK pensioners continues. For specific indicator calculation purposes, the United Kingdom is no longer included in the core sample of Member States.

More information on methodology, detailed results and statistical analysis is available in the appendices to this report and detailed procedural manuals. For any information concerning this report, please contact the Eurostat Remuneration Team in Luxembourg:

1. EVOLUTION OF THE PURCHASING POWER OF SALARIES OF NATIONAL OFFICIALS

1.1. Specific Indicators

For the July 2020 – July 2021 exercise Eurostat has compiled information for the EU27 Member States. The global specific indicator is calculated for the sample of 10 EU Member States stipulated in the Staff Regulations, which represents at least 75% of the EU gross domestic product (GDP), in accordance with the approved method manual.

Table 1 therefore shows the changes in the net remuneration, both in nominal and real terms, in each of these 10 Member States⁹. Changes in the harmonized indices of consumer prices (inflation rates) during the period June 2020 to June 2021 have been used to transform nominal changes in the remunerations into movements in real terms. In order to get the global specific indicator the results per country have been weighted in proportion to their national GDP for the year 2020 expressed in purchasing power parities.

On this basis, the global specific indicator (average change in real net remuneration) for the year 2021 is **99.8 (-0.2%)**.

Table 1
Change in the net remuneration of central government civil servants
July 2020 - July 2021

Country	Weight ¹ EU27=100	Weight in sample	Nominal net specific indicator	Consumer price indices	Real net specific indicator	Effect on the total
	(%)	(%)	(%)	(%)	(%)	
BE	3.0	3.7	0.2	2.6	-2.3	-0.09
DE	22.6	28.1	2.2	2.1	0.1	0.03
ES	9.1	11.3	2.0	2.5	-0.5	-0.06
FR	15.7	19.6	1.1	1.9	-0.8	-0.16
IT	12.5	15.6	0.0	1.3	-1.3	-0.20
LU	0.4	0.5	0.0	3.4	-3.3	-0.02
NL	5.2	6.5	1.9	1.7	0.2	0.01
AT	2.5	3.1	1.9	2.8	-0.9	-0.03
PL	6.5	8.1	8.1	4.1	3.8	0.31
SE	2.8	3.5	1.8	1.8	0.0	0.00
Total	80.3	100.0	2.0	2.2	-0.2	-0.2

¹ Basis: GDP expressed in PPP, 2020

⁹ Information for the EU27 is included in [Appendix 1a](#).

2. CONTROL INDICATORS

In accordance with Article 1.4 (c) of Annex XI of the Staff Regulations, Eurostat also compiles comparative information for control purposes.

There is no direct equivalent of the net specific indicator. Control indicators are provided for comparison with the gross specific indicator in real and nominal terms.

2.1. Compensation of employees in central government

Eurostat compiles data concerning the real per capita emoluments in central government (ESA s.1311 expenditure on compensation of employees, divided by ESA s.1311 employee numbers¹⁰). These data serve as control indicators for individual countries and a weighted average is also calculated. As this control indicator is expressed in constant prices, it is compared with the gross specific indicator in real terms.

Table 2a compares the changes in real gross specific indicator for the twelve months to July 2021 with the control indicator (compensation of employees) for calendar year 2021, where the respective values for calendar year 2020 are taken as 100. The table also shows the differences (in percent) between these two indicators.

The global compensation of employees control indicator (weighted average of individual country values) for 2021 is 101.7 (+1.7%).

Relatively big differences are apparent for some Member States. They result from conceptual and statistical differences between the gross specific indicator in real terms and the control indicator.

2.2. Labour cost index for total public administration

A control indicator of the movement in total labour cost in public administrations of the Member States (NACE group 'O') is also calculated. These data serve as control indicators for individual countries and a weighted average is also calculated. As this control indicator is expressed in nominal terms, it is compared with the nominal specific indicator of gross salaries.

Table 2b compares the changes in nominal gross specific indicator for the twelve months to July 2021 with the control indicator (labour cost index) for Q2 2021, where the respective values for Q2 2020 are taken as 100¹¹. The table also shows the differences (in percent) between these two indicators.

The global labour cost index control indicator (weighted average of individual country values) for 2021 is 101.5 (+1.5%).

The labour cost index control indicator is not available for all Member States. Relatively big differences are apparent for some Member States. They result from

¹⁰ Where the ESA 2010 central public administration (s.1311) figure was not supplied to Eurostat by Member States, the number of employees in total public administration (= NACE Rev.2 group 'O': central public administration/defence/social security) was used instead.

¹¹ Where the data for Q2 2021 was not available, Q1 2021 to Q1 2020 was used instead. This was the case for NL.

conceptual and statistical differences between the nominal gross specific indicator and the control indicator.

Table 2a

Comparison of the gross specific indicator and the control indicator in real terms

Country	Real gross specific indicator 2021 (2020 = 100)	Control indicator * 2021 (2020= 100)	Difference (%)
BE	97.5	99.3	1.8
DE	99.2	103.4	4.2
ES	99.9	103.8	3.9
FR	99.3	99.1	-0.2
IT	98.7	99.0	0.3
LU	96.7	106.0	9.6
NL	99.4	104.2	4.9
AT	99.3	104.5	5.3
PL	104.2	102.4	-1.7
SE	99.5	101.3	1.8
Total	99.6	101.7	2.1

* Compensation of employees in central government: Eurostat estimates.

Table 2b**Comparison of the gross specific indicator and the control indicator in nominal terms**

Country	Nominal gross specific indicator 2021 (2020 = 100)	Control indicator * 2021 (2020 = 100)	Difference (%)
BE	100.0	100.7	0.7
DE	101.3	101.5	0.2
ES	102.4	100.2	-2.2
FR	101.2	:	:

PL	108.5	104.7	-3.5
SE	101.3	100.9	-0.4
Total	101.7	101.5	-0.2

* Labour Cost Index: Eurostat estimates

3. CHANGES IN THE COST OF LIVING IN BRUSSELS AND LUXEMBOURG

For the July 2020 – July 2021 exercise Eurostat has calculated the Joint Belgium-Luxembourg Index ("JBLI") as stipulated by the Staff Regulations, in accordance with the approved method manual, by weighting national consumer price inflation as measured by the Belgium HICP and Luxembourg CPI according to the distribution of EU staff serving in those Member States.

At the start of the period under review the ratio between EU officials working in Brussels and in Luxembourg was 80.9% : 19.1%. This represents a small change in ratio compared to the previous year (81.2 : 18.8).

The detailed breakdown of this index corresponding to the 2021 annual salary adjustment is set out in **Table 3**. The table shows that the cost of living for the EU officials in Brussels and Luxembourg during the period June 2020 – June 2021 has increased, on average by 102.1 (+2.1%).

Table 3
Change in the Joint Belgium-Luxembourg Index
June 2020 - June 2021

Groups of consumption	Weight	Index
1. Food and non-alcoholic beverages	125.9	99.1
2. Alcoholic beverages and tobacco	13.9	101.7
3. Clothing and footwear	43.1	100.8
4. Housing, water, electricity, gas and other fuels	344.2	104.6
5. Furnishings, household equipment and maintenance of house	64.5	100.7
6. Health	12.7	99.9
7. Transport	130.0	102.2
8. Communications	19.8	99.7
9. Recreation and culture	79.6	100.2
10. Education	26.7	101.0
11. Hotels, cafes and restaurants	81.1	101.4
12. Miscellaneous goods and services	58.6	101.7
Global index without rents	721.4	102.2
Rents index	278.5	101.9
Global index	1000.0	102.1

4. UPDATE OF REMUNERATION AND PENSIONS IN BELGIUM AND LUXEMBOURG

Taking into account the figures reported in chapters 1 and 3, and before consideration of the moderation and exception clauses in chapters 4 and 5, the adjustment of the nominal net remuneration of EU officials in Brussels and Luxembourg with effect from July 2021, which is necessary to maintain a parallel development of purchasing power with the civil servants in the Member States, is equal to:

Annual update

$$\frac{99.8 \times 102.1}{100} - 100 = +1.9\%$$

The same adjustment applies to the nominal pensions of retired EU officials in Belgium and Luxembourg.

5. MODERATION CLAUSE

In accordance with Article 10 of Annex XI to the Staff Regulations, if the value of the global specific indicator exceeds an upper limit of +2% or is below a lower limit of -2%, then the value of the limit shall instead be used to establish the annual update which applies with effect from 1 July – and the remainder of the annual update shall be applied with effect from 1 April.

As the calculated global specific indicator value for the current exercise which is reported in Chapter 1 falls within these boundaries, the moderation clause does not apply for the adjustment of the nominal net remuneration of EU officials in Brussels and Luxembourg with effect from 1 July 2021.

6. EXCEPTION CLAUSE FOR THE CURRENT ANNUAL EXERCISE

In accordance with Article 11 of Annex XI to the Staff Regulations, if the value of the specific indicator is positive, but there is a decrease in the EU total gross domestic product for the current year according to the latest available forecast produced by the Commission, then only part of the specific indicator shall be used to calculate the annual update and the remainder shall be delayed.

Four scenarios are therefore possible:

	GDP evolution	1 July	1 April	Cumulative*
1	$0\% \leq X$	100%	0%	0%
2	$-1.0\% \leq X < 0\%$	33%	67%	0%
3	$-3.0\% \leq X < -1.0\%$	0%	100%	0%
4	$X < -3.0\%$	0%	0%	100%
* 1 July in year when cumulative GDP is again positive				

The European Economic Forecast issued by DG ECFIN on 7 July 2021 estimated that GDP for the EU as a whole in real terms will increase by +4.8% for 2021, and growth of +4.5% is foreseen for 2022¹².

As GDP evolution for the EU in real terms for 2021 is forecasted to be positive, the exception clause does not apply.

7. REVIEW APPLICATION OF EXCEPTION CLAUSE FROM THE PREVIOUS ANNUAL EXERCISE

In accordance with Article 11 of Annex XI to the Staff regulations, if there is a gap between the forecast used in the Annual Report for the previous year and the final GDP data for that calendar year, which would modify the original assessment whether the exception clause should have applied, a retroactive adjustment should take place.

The published real GDP growth rate (percentage change on previous year) for the EU as a whole for calendar year 2020 is -5.9%¹³. Although smaller than the negative GDP forecast which was used in the previous Annual Report (-8.3%), it confirms that the magnitude of the decrease exceeds -3.0%. Consequently, no retroactive correction is required to the suspension of the specific indicator component of the annual update which was established at 1 July 2020 (+2.5%) with only the cost of living component (+0.7%) being applied.

Combining the -5.9% movement established for 2020, with the +4.8% forecast for 2021, it is apparent that for 2021 the cumulative total is insufficient to recover the whole of the decrease registered in 2020, and has not yet reached the same level as before (i.e. 2019). On this basis, there will be no unwinding of the suspended 2020 payment as part of the 2021 annual adjustment. With forecast growth for 2022 of +4.5%, the cumulative total should then exceed the level prior to the 2020 decrease.

¹² https://ec.europa.eu/info/business-economy-euro/economic-performance-and-forecasts/economic-forecasts/summer-2021-economic-forecast_en

¹³ Source: Eurostat Free Data Table tec00115 (extracted 15.10.2021). T+9 statistics submitted by Member States in accordance with the ESA 2010 transmission timetable.

Based on the information which is currently available, it therefore seems likely that the suspended component will instead be paid alongside the 2022 annual adjustment.

8. ADJUSTMENT OF REMUNERATION AND PENSIONS OUTSIDE BELGIUM AND LUXEMBOURG

The value of the annual update for duty station locations outside Brussels (active staff) and places of residence outside Belgium (pensioners) is equal to the product of the annual update for Brussels (active staff) or Belgium (pensioners) multiplied by the change in the economic parities between Brussels and the duty station (active staff) or Belgium and the country of residence (pensioners).

In accordance with Article 3(5) of Annex XI no correction coefficient is applicable in Luxembourg.

9. CORRECTION COEFFICIENTS FOR STAFF OUTSIDE BELGIUM AND LUXEMBOURG IN INTRA-EU DUTY STATIONS¹⁴

This section presents the values of the economic parities and correction coefficients for staff, calculated in accordance with the approved method manual.

As at July 2021, information is compiled for a list of 30 Intra-EU capital cities and other duty stations. By comparison to the situation at July 2020, 1 location is now excluded from the list¹⁵.

The object of the economic parities is to compare the relative costs of living of EU officials in Brussels (reference city) with each of the European capitals and other places of employment in the European Union for which a correction coefficient has been set. The method used is to compare the price of a "basket" of goods and services in Brussels with the prices of similar goods and services in each of the other places of employment. The weighted average of all the price ratios is the "economic parity". The average consumption expenditure patterns of EU officials are used as weights, identified by means of periodic surveys of household expenditure. In places of employment outside Brussels with very few officials, a common structure pooling all the questionnaires from similar locations is derived instead.

The changes in the cost of living in the places of employment outside Belgium and Luxembourg are measured by the implicit price indices which are calculated as the product of the Joint Belgium-Luxembourg Index of consumer prices (JBLI) and the changes in the economic parities between Brussels and those other places. **Table 4** shows these changes for the year to July 2021.

¹⁴ A separate chapter is prepared concerning correction coefficients for duty stations outside the European Union, to which the additional provisions of Annex X to the Staff Regulations also apply.

¹⁵ DE-Bonn. This is because data for DE-Bonn is no longer available from the national statistics office in accordance with European Comparison Programme methodology applied for other duty stations in Germany for which CC are produced (DE-Berlin, DE-Karlsruhe and DE-Munich). CC are not produced for other duty stations in Germany (e.g. Cologne, Frankfurt). During the period July 2014 - July 2020, the average CC value for DE-Bonn (c. 94) has been within 5% of the average CC value for DE-Berlin (c. 98).

The correction coefficients applicable to the salaries of the European institution officials working in the capitals and places of employment other than Brussels and Luxembourg are determined on the basis of the relationships between the economic parities and the exchange rates for the month of July.

The correction coefficient operates as a percentage adjustment to salaries to take account of the cost of living differences between Brussels and the various duty stations.

Table 5 shows the calculation of the correction coefficients at July 2021 for places of employment situated in the European Union territory for which correction coefficients have been set.

In the tables, purchasing power parities are shown rounded to 3 decimal places (in Euro zone) or 4 significant figures; exchange rates are shown in the same format; correction coefficients are shown rounded to 1 decimal place; percentage movements are shown rounded to 1 decimal place.

10. CORRECTION COEFFICIENTS FOR PENSIONERS OUTSIDE BELGIUM AND LUXEMBOURG

This section presents the values of the economic parities and the correction coefficients for pensioners, calculated in accordance with the approved method manual.

The Staff Regulations stipulate the creation of correction coefficients for pensioners separate from those used for adjusting the remuneration of active staff¹⁶. The difference is that instead of being based on capital city price comparisons they relate to national comparisons, with Belgium as the base country.

Their use is subject to specific rules set out in the Staff Regulations.

The changes in the cost of living in Member States other than Belgium and Luxembourg are measured by the implicit indices which are calculated as the product of the Joint Belgium-Luxembourg Index of consumer prices (JBLI) and the changes in the economic parities between Belgium and the Member States.

Table 6 shows these changes for the year to July 2021.

Table 7 shows the correction coefficients calculated for pensioners for all Member States (relative to Belgium) at July 2021.

In the tables, purchasing power parities are shown rounded to 3 decimal places (in Euro zone) or 4 significant figures; Exchange rates are shown in the same format; correction coefficients are shown rounded to 1 decimal place; percentage movements are shown rounded to 1 decimal place.

¹⁶ This requirement was first introduced by Council Regulation 723/2004

11. CORRECTION COEFFICIENTS FOR STAFF SERVING OUTSIDE THE EUROPEAN UNION

The Staff Regulations stipulate the creation of correction coefficients for staff serving in duty stations outside the European Union separate from those used for adjusting the remuneration of active staff within the European Union¹⁷.

This section presents the values of the economic parities and the correction coefficients for Extra-EU staff, calculated in accordance with the approved method manual.

An important difference from the values established for Intra-EU locations is that expenditure on housing is not taken into account because Annex X makes specific arrangements for these¹⁸. Price data for remaining consumption items is taken from “place-to-place” (P2P) surveys undertaken in collaboration with the United Nations International Civil Service Commission (UN.ICSC) and the International Service for Remunerations and Pensions of the Coordinated Organisations (CO.ISRP). This data is used to establish economic parities with Brussels, which are subsequently updated using published national consumer price indices (CPI), relative to the Joint Belgium-Luxembourg Index of consumer prices (JBLI). Basic heading parities are aggregated using consumption expenditure weights derived from periodic family budget surveys conducted amongst EU staff.

Another important difference is that in accordance with Annex X of the Staff Regulations, Extra-EU correction coefficients are only applied at the specific request of the EU official, irrespective whether they are above or below 100.

Information is compiled for a list of 141¹⁹ Extra-EU duty stations, however economic parities are not presented where data is unavailable or unreliable due to local instability or other reasons²⁰. The total changes in the cost of living are measured by the implicit indices which are calculated as the product of the Joint Belgium-Luxembourg Index of consumer prices (JBLI) and the changes in the economic parities between Brussels and the duty station concerned.

Table 8 shows these changes for the year to July 2021.

Table 9 shows the correction coefficients for all extra-EU duty stations (relative to Brussels) calculated at July 2021.

In the tables, purchasing power parities are shown rounded to 3 decimal places (in Euro zone) or 4 significant figures; Exchange rates are shown rounded to 6 significant figures; correction coefficients are shown rounded to 1 decimal place; percentage movements are shown rounded to 1 decimal place.

¹⁷ This requirement was first introduced by Council Regulation 3019/87

¹⁸ In accordance with decision at March 2016 meeting of Working Group on Articles 64&65, and in agreement with international partner organisations, Extra-EU PPP are now established using the same classification of 80 basic headings as employed for Intra-EU purposes (sole exception: housing).

¹⁹ At July 2020: 147 duty stations. Two Extra-EU locations added since July 2020 (Qatar; São Tomé et Príncipe). 8 Extra-EU locations were deleted since July 2020 (Belize; Bosnia and Herzegovina-Banja Luka; Comoros; Indonesia-Banda Aceh; Samoa; Solomon Isles; Suriname; Vanuatu).

²⁰ Currently 9 locations are affected (Afghanistan; Iraq; Lebanon; Libya; Somalia; Syria; Venezuela; Yemen; Zimbabwe).

INTRODUCTION

This document is an appendix to the 2021 Eurostat report on the annual adjustment of remuneration and pensions. While the principal results concerning specific indicators are presented in the main report, the purpose of this appendix is to give further explanations and statistical analyses of the results as well as detailed tables with statistical information.

Chapter 1 of this document examines the changes in the purchasing power of salaries of central government civil servants in the Member States (specific indicator).

In Chapter 2 information is provided about control indicators (compensation of employees in central government; labour cost index for total public administration).

In Chapter 3 information about working time in central governments of the Member States is given.

All calculations and figures presented in this appendix relating to specific indicators are based on data supplied and validated by the responsible authorities in the Member States. Completed 2021 remuneration questionnaires were received from all Member States, allowing the calculation of a specific indicator in combination with data provided for 2020. For the current annual exercise, the official forecast figure they supplied in March 2021, or a more recent estimate, was not used for any Member State²¹.

Important note: the United Kingdom left the European Union with effect 1 February 2020 and is now a ‘third country’. The transition agreement introduced by the ‘Withdrawal Agreement’ expired with effect 31 December 2020. This has an important implication for the calculation of the global specific indicator. The UK is no longer included in the core sample of Member States for specific indicator calculation purposes. The remaining sample continues to represent at least 75% of the EU27 gross domestic product.

More information about methodology can be found in the detailed procedural manual²².

For any information concerning this report appendix, please contact the Eurostat Remuneration Team in Luxembourg:

²¹ Op cit (3) For the 2020 annual exercise, the official forecast was used for 1 Member State: Romania

²² Op cit (6) Doc.A6465/14/26rev4 (version March 2020)

1. PARALLELISM WITH EVOLUTION OF PURCHASING POWER OF NATIONAL OFFICIALS

1.1. General remarks on the calculation of the specific indicator

The *global specific indicator* is a measure to represent the average change in the purchasing power of central government civil servants in the Member States of the European Union. It is measured by the real net salary increase in the central government civil services.

One of the basic elements of the annual salary adjustment procedure is the principle of **parallel development** of the salaries, in terms of purchasing power of national central government civil servants and of officials of the European Union. The **specific indicator** is the methodological tool allowing the implementation of this principle of parallelism.

Article 65 and Annex XI determine the basic principles of the method, but these have to be complemented with practical procedures²³. Therefore, we provide here a set of commonly agreed basic definitions. If a particular situation in a given country makes it meaningful to deviate from these definitions to ensure a better application of the spirit of the method, then Eurostat, in agreement with that country may do so.

1.1.1. Elements of remuneration

All elements of remuneration that affect the purchasing power of civil servants should be taken into account in calculating the gross remuneration. All general bonuses and premiums, which are part of the salary, should be reported. In general the following elements should be taken into account:

- basic salaries;
- all allowances and bonuses (e.g. general premiums, child benefit and family allowances²⁴);
- non-pensionable lump-sum payments (e.g. annual holiday pay, Christmas bonus).

Not to be included:

- regional allowances granted to compensate for 'cost-of-living' differences;
- increase due to promotion or seniority;
- person-specific special allowances, for example individual bonuses for exceptional performance.

1.1.2. Net remuneration

In order to get the net remuneration the following elements should be deducted from the gross remuneration:

- the amount of compulsory social deductions (social security and occupational pension scheme contributions);
- general taxes on income;
- other compulsory deductions (mutual assistance contribution, temporary contribution, etc.).

Not to be included:

- voluntary contributions.

²³ For full details, see the latest version of the methodology manual.

²⁴ Where national civil servants are also eligible for state benefits (family allowances) these are included.

1.1.3. Reference period

In order to calculate the specific indicator for the year (t) the remuneration of central government civil servants on a fixed month of the year (t-1) is to be compared with the remuneration on the same date of the year (t).

The method is based on the comparison of a snapshot of a national remuneration system in the month of July of the current year with the equivalent snapshot in the month of July of the previous year. A snapshot of the system, however, does not simply mean the remuneration grid in a particular month; rather it means the remuneration level of the reference population employees in that month, including 1/12 of all annually paid elements such as Christmas bonuses, annual holiday pay, lump-sum payments etc.

If Member States report remuneration data of a given month/year again (e.g. data concerning remuneration of July 2020 sent in 2020 and re-sent in 2021), the data should be exactly the same. If not, they have to provide Eurostat with a clear justification (e.g. change in the structure of grades and categories in the public administration) and impact analysis.

1.1.4. Reference population

The reference population relates to permanent statutory staff of the sub-sector “**central governments**” (**S.1311 of ESA 2010**) of Member States. It should be noted that the sub-sector S.1311 in ESA 2010 is defined as follows:

“This sub-sector includes all administrative departments of the state and other central agencies whose competence extends normally over the whole economic territory, except for the administration of social security funds.”

The reference population for calculating the specific indicator consists of subsector central government, with the following exclusions:

- state and local governments;
- social security funds;
- the armed forces, security forces, police forces, frontier guards, etc.;
- teaching staff;
- medical staff of national health services;
- ministers of religion, if directly paid by central government;
- diplomats and magistrates.

1.1.5. Sample of family types

The specific indicator for each country is calculated on the basis of remuneration data of officials of two different family statuses - **single** and **married with two dependent children**, and each with a weight of 50%. Where relevant, spouses are assumed to have zero income.

1.1.6. Function groups

According to Annex XI, Art. 1 Eurostat is obliged to provide a specific indicator for each of the three function groups: Administrators (AD), Assistants (AST) and Secretaries and Clerks (AST/SC). Therefore, the posts in the national reference population should be classified, according to the nature of the duties to which they relate, in these three function groups – each should comprise several grades.

- Function group **AD** relates to staff engaged in administrative, advisory, linguistic and scientific duties that require university education or equivalent professional experience.
- Function group **AST** relates to staff engaged in executive and technical duties that require an advanced level of secondary education or equivalent professional experience.

- Function group **AST/SC** relates to staff engaged in clerical and secretarial duties that require an advanced level of secondary education or equivalent professional experience.

1.1.7. Sample of grades

Out of the reference population the Member States may select a sample of the more important grades in terms of staff numbers for each of the above mentioned function groups. Grades having only a small proportion of the total number of staff may be excluded from the sample.

The sample should be representative of the reference population. The ratio between the number of staff in the grades covered by the sample and the number in the reference population should normally be more than 75%.

1.1.8. Sample of countries

Prior to 2004, data for all EU15 Member States was used.

Between 2004 and 2012 a sample composed of the following 8 Member States was specified: Belgium, Germany, Spain, France, Italy, Luxembourg, Netherlands and United Kingdom. For 2013 it was agreed to use data for all 28 Member States.

A new version of Annex XI was adopted in October 2013, and specifies a sample composed of 11 Member States (the same 8 as for 2004-2012 plus Austria, Poland and Sweden). This sample took effect from January 2014.

The United Kingdom left the EU with effect 1 February 2020 and is now a ‘third country’. The transition period introduced by the ‘withdrawal agreement’ expired with effect 31 December 2020. Consequently, the UK is no longer included in the core sample of Member States for specific indicator calculation purposes (the remaining sample continues to represent at least 75% of the remaining EU27 gross domestic product).

1.1.9. Calculation of country specific indicators

On receipt of the data from the Member States, Eurostat calculates specific indicators for each of the countries separately²⁵. The steps leading to these calculations are:

- For each grade, Eurostat will calculate average gross and net remunerations for the available steps (e.g. minimum, maximum, median) and the family types.
- Average gross and net remunerations for each grade are then aggregated to three function groups (AD, AST and AST/SC). They are calculated by taking weighted averages of the grades belonging to these groups. The sample size (number of civil servants in the sample of each grade) is taken as weight.
- The average gross and net remunerations for the three function groups are then aggregated to overall gross and net remunerations in the central government civil service by taking the weighted average of the remunerations of these three groups, where the total actual number of civil servants in each of the groups is taken as weights.
- For each of the function groups as well as for the overall remunerations the following changes for the period July – July are calculated:
 - Gross nominal
 - Net nominal
 - Gross real
 - Net real

²⁵ With effect from 2018, Eurostat and the International Service for Remunerations and Pensions of the Coordinated Organisations compile harmonised data for the following 7 Member States: Belgium, Germany, Spain, France, Italy, Luxembourg and Netherlands.

- The increases/decreases in real terms are calculated by taking into account the increases/decreases in nominal terms and the increase/decrease in the harmonized index of consumer price (HICP) for the corresponding period.
- The overall real net increase/decrease in remuneration is called the **country specific indicator**.

1.2. Specific indicators - results by functional groups

Table 1.1 sets out the gross and net specific indicators for each of the three function groups, both in nominal and real terms, for the sample of countries specified in the Staff Regulations.

Table 1.1

**Nominal and real changes in the remuneration of national civil servants
in the twelve-month period to 1st July 2021 (1.7.2020 = 100)**

1.6. Global specific indicator for the EU27

Combining the information in Table 1.4 with the information in Table 1 of the main report, it is possible to calculate a hypothetical global specific indicator for the EU27 as a whole. For the year to July 2021, this would be 102.4 (+2.4%) in nominal terms, and 100.2 (+0.2%) in real terms.

1.7. Changes in the specific indicators (countries in the sample)

With effect from 2018, joint data compilation and validation with ISRP for Belgium, Germany, Spain, France, Italy, Luxembourg and Netherlands.

The main changes affecting the individual country specific indicators in nominal terms for the period are as follows:

<u>1</u>	<p>Belgium: Figures are supplied in accordance with a country manual validated in November 2015 and subsequent bilateral correspondence.</p> <p>Increase of staff of +3295. No change in index. Gross nominal salary remained at +0.0%.</p> <p>Minor changes in professional tax and tax deductions made the nominal net salaries change by +0.2%.</p>
<u>2</u>	<p>Germany: Figures are supplied in accordance with a country manual validated in September 2016 and subsequent bilateral correspondence.</p> <p>Increase of staff (+1929), especially in AST equivalent grades. The gross salary increased by +1.3%.</p> <p>Only slight modifications of some parameters used for taxation and calculation of social contributions. As from 2021, the solidarity tax will be abolished for 90% of taxpayers. In consequence, the nominal net remuneration has increased by +2.2%.</p>
<u>3</u>	<p>Spain: Figures are supplied in accordance with draft country manual as presented at A6465WG meeting in March 2015 and subsequent bilateral correspondence.</p> <p>Increase of staff: +760. A salary increase in annual Budget Law. The gross remuneration gives a +2.4% change.</p> <p>Statutory deductions reflect the annual Budget Law and are largely unchanged. Overall, nominal net remuneration has increased by +2.0%.</p>
<u>4</u>	<p>France: Figures are supplied in accordance with country manual validated in April 2010 and subsequent bilateral correspondence.</p> <p>Big staff decrease of -3478 (very big change for several AST grades: <i>Adj. adm. princ.</i> -2066, <i>Adj. adm.</i> -952 and <i>Secr. admin. classe exc.</i> -935). Revaluation of the minimum of grids for <i>Admin. and Technical Assistants</i> and of max. of grids for <i>Admin Civil and Attaché Princ.</i> Nominal gross remuneration increased by +1.2%.</p> <p>Overall no major changes, the nominal change in net remuneration was +1.1%.</p>
<u>5</u>	<p>Italy: Figures are supplied in accordance with country manual validated in March 2016 and subsequent bilateral correspondence.</p> <p>Very big decrease in staff (-7429), especially in AST equivalents. No evolution in gross salary: +0.0%.</p> <p>There were no structural changes to statutory deductions. As a result, there is no change in the nominal net remuneration: +0.0%.</p>

<p>6</p>	<p>Luxembourg: Figures are supplied in accordance with a draft country manual as presented at A6465WG meeting in March 2015 and subsequent bilateral correspondence.</p> <p>Decrease in staff of -530. No indexation of salaries. Therefore no increase of the nominal gross remuneration: +0.0%.</p> <p>No major changes in tax and social contributions, resulting in a stable nominal net remuneration of +0.0%.</p>
<p>7</p>	<p>Netherlands: Figures are supplied in accordance with country manual validated in December 2015 and subsequent bilateral correspondence.</p> <p>Big increase of staff (+8364), especially for grades AD 10, 11 and 12. Basic salary increase of +0.7% per July 2020. Minor increases in min. holiday allowance and child benefit. EUR 225 fixed amount payment. The total increase of nominal gross remuneration was +1.1%.</p> <p>Increase in health insurance contribution. Various changes to personal income tax rates and deductions. As a result of these changes, nominal net remuneration increased by +1.9%.</p>
<p>8</p>	<p>Austria: Figures are supplied in accordance with a country manual validated in December 2015 and subsequent bilateral correspondence.</p> <p>Decrease of -798 in staff, especially for some AST grades. The average salary increase across all public employees at Federal Level amounts to +2.1%.</p> <p>“Sonderausgabenpauschale” (=60 eur) abolished since 01.01.2021. Family Bonus Plus – a tax deduction that increased from EUR 1500 to EUR 1750.</p> <p>Changes in income taxes, resulting in a nominal net increase of +1.9%.</p>
<p>9</p>	<p>Poland: Figures are supplied in accordance with country manual validated in September 2015 and subsequent bilateral correspondence.</p> <p>Small staff increase (+95). Increase in 2020 minimum average salary and the base amount of wages in the civil service. This gives a nominal gross remuneration increase of +8.5%.</p> <p>There were changes in pension scheme and income taxes. The nominal net remuneration increased by +8.1%.</p>
<p>10</p>	<p>Sweden: Figures are supplied in accordance with a country manual validated in February 2018 and subsequent bilateral correspondence.</p> <p>Staff increase of +898, especially for grade AD ‘others’ (+591). New central framework agreement from 1st December 2020 (RALS 2020-2023). Yearly revision of salaries, the first from 1st October 2020. As from this year’s exercise, large-family supplement (“flerbarnstilläg”) applied (SEK 150 for 2nd child). The reported evolution in nominal gross remuneration is +1.3%.</p> <p>Small decrease in municipal tax. Abolished supplementary income tax rate on incomes above SEK 57000/month. Overall, the nominal net remuneration increased by +1.8%.</p>

1.8. Changes in the specific indicators (countries not in the sample)

The main changes affecting the individual country specific indicators for the period are as follows:

<p>1</p>	<p><u>Bulgaria</u>: Figures are supplied in accordance with the country manual (as adopted in February 2021) and subsequent bilateral correspondence.</p> <p>Staff increase of +598, especially for AD chief expert. As in previous years there are reported salary increases and decreases for almost all grades. On average, nominal gross remuneration increased by +13.1%.</p> <p>No changes in statutory deductions. The nominal net remuneration increased by +13.0%.</p>
<p>2</p>	<p><u>Czech Republic</u>: Figures are supplied in accordance with draft country manual as presented at A6465WG meeting in March 2015 and subsequent bilateral correspondence.</p> <p>Small decrease in staff numbers (-12). Basic salaries increased by +8.7%. As in previous years there was volatility in reported values. On average, nominal gross remuneration increased by +1.9%.</p> <p>As of 2021, the Czech Republic returns to a progressive taxation system, with the introduction of a marginal rate of 23%. The solidarity surcharge of 7% for high-income earners now paid by employer. An additional amount of CZK 300 was added to child allowance, as applicable if one of parents work. In consequence the increase in nominal net remuneration was +8.9%.</p>
<p>3</p>	<p><u>Denmark</u>: Figures are supplied according to approach agreed bilaterally in 2017.</p> <p>Staff numbers decreased by -381 (especially AD category). Small basic salary increase of +0.71% for all staff categories. Additional raise for AST 3383 and AST 315 following agreement, respectively +0.7% and +0.2%. The nominal gross remuneration therefore increased by +1.1%.</p> <p>Minor changes to income tax arrangements (brackets and personal deduction) are reflected in the calculation of nominal net remuneration, which increased by +1.5%.</p>
<p>4</p>	<p><u>Estonia</u>: Figures are reported here in accordance with bilateral discussions December 2014 and subsequent correspondence.</p> <p>Decrease in staff (-91). Nominal gross salary has increased on average by +17.8%. This partly reflects an under-reporting error for t-1 figures and partly the movement for the current year. The maximum of the gross salary is largely impacted from additional remunerations (especially compensation for high workload involved with handling the COVID-19 crisis).</p> <p>No changes in tax exemptions. No change in child allowance. In consequence, the nominal net remuneration increased by +16.7%.</p>
<p>5</p>	<p><u>Ireland</u>: Figures are supplied in accordance with draft country manual as presented at A6465WG meeting in March 2015 and subsequent bilateral correspondence.</p> <p>Increase in staff of +1027 (especially for SC CO and ASR EO). General salary increase of +2.0% per October 2020. The nominal gross remuneration increased by +2.4%.</p> <p>A New Public Service Stability Agreement still to be approved for years 2021-2022.</p> <p>No changes in deductions, except for thresholds for Universal Social Charge (USC). As a result, the nominal net remuneration increase amounts to +1.9%.</p>

<p>6</p>	<p>Greece: Figures are supplied in accordance with draft country manual as presented at A6465WG meeting in March 2015 and subsequent bilateral correspondence.</p> <p>Staff decreased by -1419 (especially AST SE: -2506, AD AE: +1320). No increase of the gross salary, as no change to basic salary and family allowance. Minimum wage increase foreseen for 2022 (+2%).</p> <p>The compulsory deductions have not changed. There is no movement in nominal net remuneration: +0.0%.</p>
<p>7</p>	<p>Croatia: Figures are supplied according to the country manual as validated in March 2021 and subsequent bilateral correspondence in 2021.</p> <p>Increase in staff compared to 2020: +279. The basis for salary calculations has increased since 1 January 2021. No changes in other components. Nominal gross salary has increased on average by +3.7%.</p> <p>Income taxes decreased, depending on tax base (from 24% to 20% (less than HRK 30.000) and from 36% to 30% (exceeding this amount)). The increase of the nominal net remuneration is +4.6%.</p>
<p>8</p>	<p>Cyprus: Figures are supplied in accordance with country manual validated in April 2015 and subsequent bilateral correspondence.</p> <p>Big increase in staff: +1450 (especially SC2: +507). Like in 2019 an increase in COLA (cost of living allowance). Nominal gross remuneration neither increased nor decreased: +0.0%.</p> <p>Increase in contribution fee for health care. Earnings reductions again going down in order to be completely abolished in 2023. The movement in net remuneration is +1.5%.</p>
<p>9</p>	<p>Latvia: Figures are reported here in accordance with bilateral correspondence.</p> <p>Increase in staff of +446, especially for grade AD3: +388. Because of the increased minimum wage, the reported average nominal gross remuneration amounts to +2.5%.</p> <p>A new Law of Remuneration of Officials is under preparation.</p> <p>Some changes in rate and thresholds for PIT (personal income tax). Together with a reduced social security rate, the average nominal net remuneration increased by +3.5%.</p>
<p>10</p>	<p>Lithuania: Figures are reported here in accordance with bilateral correspondence.</p> <p>Staff increased by +380 (especially grade AD8: +268). Basic salary increase from EUR 176 to EUR 177 since 1 January 2021. Increase in child allowance from EUR 60 to EUR 70 p. child. The nominal gross remuneration increased with +3.6%.</p> <p>The minimum monthly wage used to determine non-taxable income rose from EUR 607 to EUR 642. The change in nominal net remuneration: +4.2%.</p>
<p>11</p>	<p>Hungary: Figures are supplied in accordance with country manual validated in May 2017 and subsequent correspondence.</p> <p>Small decrease in staff: -30. There was a big increase in salary for some grades. Average increase in gross remuneration: +7.8%.</p> <p>No real change in statutory deductions. Nominal net remuneration amounts to +7.1%.</p>

<p>12</p>	<p>Malta: Figures are supplied in accordance with a draft country manual and subsequent updates. Staff increased by +592 (biggest change: AD: +517). Increase in basic salary. The nominal gross indicator increased on average by +3.3%.</p> <p>Child allowance threshold increased again slightly. No change in personal income tax (only in thresholds and reliefs) and social security contributions. Nominal net remuneration increased by +5.2%.</p>
<p>13</p>	<p>Portugal: Figures are supplied in accordance with country manual validated in August 2014 and subsequent bilateral correspondence.</p> <p>Big increase in staff numbers: +4086. Small increase in basic salary for lower grades only, and increase in regular allowance for managers. Average increase of the nominal gross remuneration: +0.1%.</p> <p>Minor reduction in income tax. Consequently the nominal net remuneration increased by +0.6%.</p>
<p>14</p>	<p>Romania: Figures are supplied in accordance with bilateral correspondence, pending implementation of the draft manual which is currently being drafted.</p> <p>The provided information presents results of a pilot exercise of data collection, and may not be representative for the entire Romanian administration.</p> <p>Average increase in nominal net remuneration: + 1.5%</p>
<p>15</p>	<p>Slovenia: Figures are reported here in accordance with a draft country manual as presented at A6465WG meeting in March 2015 and subsequent bilateral correspondence.</p> <p>Staff number slightly increased by +58. Minor changes in allowance for meals. Increase in holiday allowance for pay grades from 21 onwards. The result is a nominal gross increase of +0.3%.</p> <p>No changes in deductions. The nominal net remuneration increased by +0.6%.</p>
<p>16</p>	<p>Slovak Republic: Figures are supplied in accordance with bilateral correspondence.</p> <p>Increased staff numbers (+137). Structural reform implemented since 2018. As in previous years, big reported changes in salaries for a lot of grades. Average increase in gross remuneration: +9.7%.</p> <p>Statutory deductions are largely unchanged by comparison with previous year. Small increase of child benefit and child tax bonus. In consequence, nominal net remuneration increased by +8.9%.</p>
<p>17</p>	<p>Finland: Figures are supplied in accordance with approach adopted in 2016 and subsequent correspondence.</p> <p>Minor change to staff numbers (increase: +36). Since 2020 again full holiday pay. Two general pay increases: +1.1% in August 2020, +0.97% in June 2021. Average gross remuneration increased by +3.0%.</p> <p>Income tax slightly reduced, unemployment insurance contribution increased. As a result, the average nominal net remuneration increased by +2.5%.</p>

1.9. Comparison with forecast

An initial forecast about the expected changes in net remuneration in nominal terms during the period 1 July 2020 – 1 July 2021 was compiled from Member States. Where these forecasts were not available, Eurostat or DG ECFIN estimates were used instead.

National estimates of expected changes in the harmonized consumer price indices (inflation rates) during the period were used to transform the nominal changes in remuneration into movements in real terms. Where these forecasts were not available, Eurostat or DG ECFIN estimates were used instead.

Values were confirmed by national delegates at the March 2021 meeting of the Working Group on Articles 64 & 65 of the Staff Regulations, and published in the Intermediate Report²⁶.

The information presented in that report is a best estimate based on available information at the time. The results of the definitive annual data collection exercise may vary by comparison to those forecasts, for example due to factors arising between the date of the Working Group meeting and the date of drafting the Annual Report.

Table 1.5 provides comparative information on the evolution of net remuneration in nominal and real terms for the countries in the sample.

Table 1.5

Comparison of the net specific indicator and the forecast in nominal and real terms for the twelve-month period to 1st July 2021

* Labour Cost Index: Eurostat estimates.

3. INFORMATION ABOUT WORKING TIME

Through the standard remuneration questionnaire, Eurostat also collects statistical information on differences in the working hours of national officials in all Member States. Information about statutory or contractual weekly working hours in central governments (**Table 10.1**), number of days of annual leave (**Table 10.2**) and number of public holidays per year (**Table 10.3**) are shown below for the Member States in the sample. In all these tables the situation in July 2021 has been compared with that in July 2020. Similarly, information is also collected about retirement age in central government. The situation at July 2021 is shown in **Table 10.4**.

Corresponding information is presented separately for the remaining Member States in **Table 10.1a** (working hours), **Table 10.2a** (annual leave), **Table 10.3a** (public holidays) and **Table 10.4a** (retirement age).

Important note: this information is supplied to help understand the situation in Member States. Any differences in working hours per week or yearly number of days on holiday are not employed to adjust the remuneration data used to establish specific indicators onto a common basis.

Appendix 1b

Appendix 1b to the Eurostat Report on the Annual Adjustment of Remuneration and Pensions

Explanations and statistical analyses:
the cost of living in Brussels and Luxembourg

Reference period:
Year to 1 July 2021

CONTENTS

INTRODUCTION	69
1. CHANGES IN THE COST OF LIVING (JOINT BELGIUM-LUXEMBOURG INDEX)	70
2. BELGIUM HICP.....	70
3. LUXEMBOURG CPI.....	72
4. STAFF RATIO BRUSSELS : LUXEMBOURG	73

INTRODUCTION

This document is an appendix to the 2021 Eurostat report on the annual adjustment of remuneration and pensions. While the principal results concerning changes in the cost of living in Belgium and Luxembourg are presented in the main report, the purpose of this appendix is to give further explanations and statistical analyses of the results as well as detailed tables with statistical information.

Chapters 1 to 4 of this document examine respectively:

- the evolution of the Joint Index;
- the evolution of the Belgium HICP;
- the evolution of the Luxembourg CPI;
- staff numbers

With the exception of the information about staff numbers which is obtained from internal Commission services, and the information about consumption expenditure pattern which is compiled by Eurostat from direct surveys of staff, all calculations and figures presented in this appendix relating to the cost of living in Belgium and Luxembourg are based on data supplied and validated by the responsible authorities in the Member States.

More information about methodology can be found in the detailed procedural manual²⁷.

For any information concerning this report appendix, please contact the Eurostat Remuneration Team in Luxembourg:

1. CHANGES IN THE COST OF LIVING (JOINT BELGIUM-LUXEMBOURG INDEX)

Annex XI Article 2 of the Staff Regulations requests that Eurostat shall draw up an index to measure the changes in the cost of living for EU officials in Belgium and Luxembourg²⁸. This index, known as the Joint Belgium-Luxembourg Index of consumer prices (JBLI) is calculated by weighting national inflation as measured by the Harmonised Index of Consumer Prices (HICP) for Belgium, and the Consumer Prices Index (CPI) for Luxembourg, between June of the previous year and June of the current year, according to the distribution of EU staff serving in Belgium and Luxembourg. This is done at the level of the detailed sub-indices for the 80 basic headings, aggregated using weights derived from the latest of the periodic Family Budget Survey conducted amongst EU staff in Brussels (2017). Precise methodology has been defined by the Working Group on Articles 64 & 65 of the Staff Regulations.

The Joint Index represents a weighted average of national indices, and may not reflect the specific price evolution in either of the reference cities (Brussels and Luxembourg). By comparing results at the level of the 12 main COICOP groups in chapters 2 and 3, reasons for the difference in the value of the overall index can be identified. Note: when doing such comparisons, the impact of differing numbers of underlying basic headings and different aggregation approaches should be remembered.

2. BELGIUM HICP

Table 3.1 presents the published HICP values for June 2020 and June 2021, base 2015 = 100, and the final figure in the right-hand column shows the variation for the period at global level, 102.6 (+2.6%).

Table 3.1
Change in the Belgian HICP (HICP weights)
June 2020 - June 2021

Groups of consumption	Weight 2020	Index 2020	Weight 2021	Index 2021	Index change
1. Food and non-alcoholic beverages	157.1	109.41	180.8	108.11	98.8

Rents index	71.1	106.96	80.4	109.07	102.0
Global index	1000.0	108.33	1000.0	111.11	102.6

²⁸ This definition was introduced by Regulation 1023/2013 and applies with effect from 1.1.2014. Alternative definitions applied for earlier reporting periods.

The foregoing information is provided by the Belgian authorities "Service public fédéral, Economie, P.M.E., Classes moyennes et Energie, division des prix" (Federal Public Service, Economy, SMEs, Self-Employed and Energy, Price indices department), and reformatted by Eurostat.

Table 3.1a below shows the revised Belgium HICP variation for the period June 2020 to June 2021, base 2015 = 100, replacing aggregation weights with ones that include owner-occupiers. The final figure in the right-hand column again shows the variation for the period at global level, 102.0 (+2.0%).

Table 3.1a
Change in the Belgian HICP (rev. weights)
June 2020 - June 2021

Groups of consumption	Weight	Index
1. Food and non-alcoholic beverages	125.9	98.8
2. Alcoholic beverages and tobacco	13.9	102.0
3. Clothing and footwear	43.1	100.5
4. Housing, water, electricity, gas and other fuels	344.2	104.2
5. Furnishings, household equipment and maintenance of house	64.5	100.6
6. Health	12.7	99.6
7. Transport	130.0	102.3
8. Communications	19.8	100.7
9. Recreation and culture	79.6	100.5
10. Education	26.7	100.6
11. Hotels, cafes and restaurants	81.1	101.3
12. Miscellaneous goods and services	58.6	102.0
Global index without rents	721.4	101.9
Rents index	278.5	102.0
Global index	1000.0	102.0

3. LUXEMBOURG CPI

Table 3.2 presents the published CPI values for June 2020 and June 2021, base 2015 = 100, and the final figure in the right-hand column again shows the variation for the period at global level, 102.2 (+2.2%).

Table 3.2

**Change in the Luxembourg CPI (CPI weights)
June 2020 - June 2021**

Groups of consumption	Weight 2020	Index 2020	Weight 2021	Index 2021	Index change
1. Food and non-alcoholic beverages	115.9	112.13	137.5	112.11	100.0
2. Alcoholic beverages and tobacco	32.9	108.82	38.9	110.74	101.8
3. Clothing and footwear	60.2	106.82	51.4	108.49	101.6
4. Housing, water, electricity, gas and other fuels	161.1	103.84	173.5	108.51	104.5
5. Furnishings, household equipment and maintenance of house	79.3	105.49	82.0	106.83	101.3
6. Health	28.9	102.96	34.7	104.14	101.1
7. Transport	163.1	101.66	147.7	106.96	105.2
8. Communications	24.2	91.95	22.8	88.85	96.6

10. Education	17.0	116.06	15.6	119.51	103.0
11. Hotels, cafes and restaurants	73.9	111.57	57.7	113.67	101.9
12. Miscellaneous goods and services	164.5	107.35	173.4	109.18	101.7
Global index without rents	931.2	106.38	915.5	108.79	102.3
Rents index	68.8	105.79	84.5	107.50	101.6
Global index	1000.0	106.34	1000.0	108.68	102.2

The foregoing information is provided by the Luxembourg authorities "Institut national de la statistique et des études économiques, STATEC, unité SOC4-Prix" (National Institute for Statistics and Economic Analysis, STATEC, Unit SOC4-Prices), and reformatted by Eurostat.

The only distinction between the Luxembourg CPI and the Luxembourg HICP is that for the CPI the weights used for aggregation purposes exclude expenditures by non-residents on the Luxembourg territory, whereas these are included for the HICP.

Table 3.2a below shows the revised Luxembourg CPI variation for the period June 2020 to June 2021, base 2015 = 100, replacing aggregation weights with ones that include owner-occupiers. The final figure in the right-hand column again shows the variation for the period at global level, 101.7 (+1.7%).

Table 3.2a
Change in the Luxembourg CPI (rev. weights)
June 2020 - June 2021

Groups of consumption	Weight	Index
1. Food and non-alcoholic beverages	125.9	100.2
2. Alcoholic beverages and tobacco	13.9	101.9
3. Clothing and footwear	43.1	102.1
4. Housing, water, electricity, gas and other fuels	344.2	103.2
5. Furnishings, household equipment and maintenance of house	64.5	101.4
6. Health	12.7	101.1
7. Transport	130.0	101.7
8. Communications	19.8	96.6
9. Recreation and culture	79.6	99.0
10. Education	26.7	103.0
11. Hotels, cafes and restaurants	81.1	102.0
12. Miscellaneous goods and services	58.6	100.6
Global index without rents	721.4	101.7
Rents index	278.5	101.6
Global index	1000.0	101.7

4. STAFF RATIO BRUSSELS : LUXEMBOURG

In accordance with the agreed methodology, the staff weights available for the base period are used. The information is obtained from Commission internal services.

The ratio between active staff in Brussels and Luxembourg for the start of the current period changed slightly by comparison to the previous values (81.2 : 18.8).

**Number of permanent officials and other servants in active service
at July 2020 (i.e. December 2019)**

Duty station	No.	%
Brussels	37,611	80.9
Luxembourg	8,892	19.1
Total	46.503	100.0

Source: PMO, as included in PSEO database (Eurostat)²⁹

²⁹ Note: the total is adjusted to exclude staff on special leave and the breakdown is analysed to include staff working in Luxembourg who reside in Belgium, France and Germany.

INTRODUCTION

This document is an appendix to the 2021 Eurostat report on the annual adjustment of remuneration and pensions. While the principal results concerning correction coefficients for staff and pensioners are presented in the main report, the purpose of this appendix is to give further explanations and statistical analyses of the results as well as detailed tables with statistical information.

Chapters 1, 2 and 3 of this document examine respectively:

- the economic parities and correction coefficients for staff (Intra-EU);
- the economic parities and correction coefficients for pensioners (Intra-EU);
- the economic parities and correction coefficients for staff (Extra-EU).

In the tables, parities are shown rounded to 3 decimal places (Euro zone) or 4 significant figures; exchange rates are shown with the same format (Intra-EU) or rounded to 6 significant figures (Extra-EU); correction coefficients are shown rounded to 1 decimal place; percentage movements are shown rounded to 1 decimal place.

With the exception of the information about consumption expenditure pattern data which is compiled by Eurostat from direct surveys of staff, and a direct survey of international schools, all calculations and figures presented in this appendix relating to correction coefficients are based on Intra-EU data supplied by the responsible national authorities. Corresponding data for Extra-EU duty stations is obtained from responsible national authorities coordinated by Eurostat under the European Comparison Programme (ECP), or through collaboration with the International Service for Remunerations and Pensions of the Coordinated Organisations (CO.ISRP) and the United Nations International Civil Service Commission (UN.ICSC).

Important note: the United Kingdom left the European Union with effect 1 February 2020 and is now a ‘third country’. The transition agreement introduced by the ‘Withdrawal Agreement’ expired with effect 31 December 2020. This has an important implication for the calculation of correction coefficients. For staff, the United Kingdom is now treated as an Extra-EU country and the production and publication of correction coefficients for London and Culham according to Intra-EU methodology has ceased. Exceptionally, production and publication of correction coefficient for existing UK pensioners continues.

More information about methodology can be found in the detailed procedural manuals for Intra-EU³⁰ and Extra-EU³¹.

1. EQUIVALENCE OF PURCHASING POWER OF EU OFFICIALS IN THE MEMBER STATES

1.1 Economic parities, exchange rates and correction coefficients

Tables 4 and 5 in the main report show the global values for active staff for all Intra-EU duty stations.

As at July 2021, information is compiled for a list of 30 Intra-EU capital cities and other duty stations. By comparison to the situation at July 2020, 1 location (DE-Bonn) is now excluded from the list³².

The correction coefficients applicable to the salaries of the European institution officials working in the capitals and places of employment other than Brussels and Luxembourg, which are calculated for the month of July, are determined on the basis of the relationships between the economic parities and the exchange rates fixed by the Commission and specified in the Staff Regulations for the relevant countries.

The correction coefficient operates as a percentage adjustment to salaries to take account of the cost of living differences between Brussels and the various duty stations. Changes in correction coefficients from one year to another are therefore a component of the annual adjustment of remuneration. However, as salaries are first expressed in Euros, then converted to local currency using exchange rate before being multiplied by the correction coefficient, it is clear that the exchange rate effect cancels out so the relevant factor is any change in the economic parities. If a correction coefficient changes due solely to a change in the exchange rate (i.e. there is no change in the economic parity), then local purchasing power will not be impacted. This is illustrated in the worked example below:

Numeric example (constant parity, fluctuating exchange rate)*

t₀: 1000 EUR x ER 9.431 x CC 127.4% (i.e. PPP 12.02 ÷ ER 9.431) = 12015 local
which is essentially the same as 1000 EUR x PPP 12.02 = 12020 local (with slight rounding effect)

t₁: 1000 EUR x ER 9.722 x CC 123.6% (i.e. PPP 12.02 ÷ ER 9.722) = 12016 local
which is essentially the same as 1000 EUR x PPP 12.02 = 12020 local (with slight rounding effect)

* t₀ = actual Sweden CC 2016, t₁ = hypothetical CC using actual ER 2017 but constant PPP

1.2 Changes between July 2020 and July 2021

An intermediate report was prepared in the usual way covering the six months July 2020 – January 2021³³. That report identifies the locations where, in accordance with Chapter 2 of Annex XI to the Staff Regulations, the change in the implicit index (i.e. the combined impact of the Joint Belgium Luxembourg Index and the change in the purchasing power parity relative to Belgium) exceeded 3%. For the period July 2020 – January 2021 the implicit index

³² Op.cit. (15) This is because data for DE-Bonn is no longer available from the national statistics office in accordance with European Comparison Programme methodology applied for other duty stations in Germany for which CC are produced (DE-Berlin, DE-Karlsruhe and DE-Munich). CC are not produced for other duty stations in Germany (e.g. Cologne, Frankfurt). During the period July 2014 - July 2020, the average CC value for DE-Bonn (c. 94) has been within 5% of the average CC value for DE-Berlin (c. 98).

³³ Op cit (7) Ares(2021)3465742

did not exceed the threshold for any Intra-EU duty station. Consequently, there was no change to the correction coefficients for staff.

1.2.1 Changes in the correction coefficients from July 2020 to July 2021

The simple average change for all duty stations in the correction coefficient for the period under review was +1.8%, with standard deviation 2.4%. The maximum increase was +5.8% (HU-Budapest). The maximum decrease was -2.2% (NL-The Hague). For 19 locations there was an increase and for 9 locations there was a decrease. The movement in correction coefficients of EU officials for the period July 2020 - July 2021 are summarised in the table below³⁴:

Range		Duty stations
$X < -3.0\%$	0	
$-3.0\% \leq X < -0.6\%$	5	DE-Karlsruhe, MT, NL, SI, SK
$-0.6\% \leq X < 1.8\%$	9	DE-Berlin, DE-Munich, FR, IT-Rome, IT-Varese, AT, PL, PT, FI
$1.8\% \leq X < 4.2\%$	7	CZ, DK, IE, ES, HR, LV, RO
$4.2\% \leq X < 6.6\%$	7	BG, EE, EL, CY, LT, HU, SE
$6.6\% \leq X$	0	
Total	28	excluding Brussels and Luxembourg ³⁵

1.2.2 Changes in exchange rates from July 2020 to July 2021

For those duty stations in Member States which are not in the Eurozone, the impact of exchange rate fluctuations relative to the Euro on the global correction coefficient can be significant. Exchange rate movements were as follows for the period July 2020 - July 2021: BG 0.0%, CZ -5.1%, DK -0.2%, HR -1.0%, HU -1.5%, PL +1.2%, RO +1.7% and SE -3.1%.

1.3 Economic parities

The object of the economic parities is to compare the relative cost of living of European officials in Brussels (reference city) and in each of the capitals and other places of employment for which a correction coefficient has been set. The method used is to compare the price of a "basket" of goods and services purchased by the average official in Brussels with the price of the same basket in each of the other places of employment. The average of all the price ratios is the "economic parity".

The system works as follows: the total range of goods and services constituting the consumption of the average European institution official is divided into 80 basic headings

³⁴ Note: For countries in the Eurozone, the change in the correction coefficient = the change in the parity. **Table 4*** shows movements for the remaining countries.

³⁵ Brussels is the reference city for the bilateral comparisons (CC for staff). In accordance with Article 3(5) of Annex XI to the Staff Regulations, Luxembourg CC = Brussels CC

(such as meat, footwear, electricity supply, motor cars, telephone communications, books). A price ratio between the place of employment and Brussels is established for each of these headings; this is called the basic parity. Price surveys are conducted on goods and services which are selected to represent the basic heading and specified in the necessary detail to enable prices in a sufficiently narrow range to be collected for internationally comparable items.

The Staff Regulations require each basic parity to be checked by direct survey at least once every five years. In practice checks are carried out at shorter intervals as part of the European Comparison Programme (ECP). Specific methodologies apply for the calculation of parities relating to delivery of healthcare services and delivery of education services. At each annual salary review around one third of the basic price parities are replaced by new parities produced by the latest price surveys.

The 80 basic parities are then updated using the ratio between the Harmonised Index of Consumer Prices (HICP) for the country in which the place of employment is located and the Joint Belgium-Luxembourg Index of consumer prices (JBLI).

Housing is dealt with differently. Special rent surveys of estate agents are carried out each year at each place of employment, including Brussels, to calculate an economic parity for the basic heading "accommodation costs for tenants". The calculation follows a methodology that has been developed by Eurostat in collaboration with the national statistical institutes of the Member States, based on the principle that the parity used should be calculated in such a way to allow European institution officials outside Brussels to live in dwellings of comparable quality to those occupied by European institution officials in Brussels. The basic parity "accommodation costs of owner-occupiers" is calculated by reference to the rent the owner-occupiers would pay if they were tenants (these are known as "imputed rents").

In order to calculate the overall economic parities weights have to be applied to each basic heading according to its relative importance in the consumption basket. These weights are calculated directly from the results of the special family budget surveys conducted among European and international civil servants every five to seven years. The resulting structure reflects the consumption of the average international civil servant in Brussels and in each country or place of employment.

Using the 80 basic parities and the specific weights the overall parity is calculated in two ways: the first uses the consumption pattern for the reference city (Brussels) (this is a type of Laspeyres index); the second uses the consumption pattern for the place of employment (this is a type of Paasche index). In accordance with the standard practice for international comparisons both types of index are calculated and the geometric mean of the results (the Fisher index) is used as the economic parity.

The details of the economic parities calculation, at the level of 12 main consumption groups, are shown in **Table 4.1** for all capitals and other places apart from Brussels and Luxembourg.

In recent years there has been repeated discussion about greater access to detailed information below the level of the 12 main consumption groups. An approved list of analytical categories has been developed for Article 64 correction coefficient purposes within the applicable constraints of data quality and sensitivity regarding source data. This list includes the 12 main COICOP groups, and adds a selection of basic headings and interim aggregates. In total there are 35 analytical categories. Following a decision at the 2017 meeting of the Working Group on Articles 64 & 65 of the Staff Regulations, this information is made available in a separate report.

Table 4*

**Changes in the economic parities, exchange rates and correction coefficients in the twelve months to 1st July 2021
(for staff)**

Country Place of employment	Parity 1.7.2021	Exch.Rate 1.7.2021	C.C. 1.7.2021	Parity 1.7.2020	Exch.Rate 1.7.2020	C.C. 1.7.2020	Parity CHANGE %	Exch.Rate CHANGE %	C.C. CHANGE %
BG Sofia	1.207	1.956	61.7	1.157	1.956	59.1	4.4	0.0	4.4
CZ Prague	22.44	25.48	88.1	22.87	26.85	85.2	-1.9	-5.1	3.4
DK Copenhagen	9.983	7.436	134.2	9.786	7.453	131.3	2.0	-0.2	2.2
HR Zagreb	5.872	7.496	78.3	5.738	7.569	75.8	2.3	-1.0	3.3
HU Budapest	267.0	351.1	76.1	256.2	356.3	71.9	4.2	-1.5	5.8
PL Warsaw	3.190	4.519	70.6	3.168	4.466	70.9	0.7	1.2	-0.4
RO Bucharest	3.373	4.928	68.5	3.227	4.844	66.6	4.5	1.7	2.9
SE Stockholm	13.22	10.15	130.3	13.02	10.48	124.3	1.5	-3.1	4.8

Note: for countries which are in the Eurozone, there is no change in the exchange rate. Consequently, the change in the correction coefficient = the change in the parity.

1.4 Purchasing power parities – analysis of results

1.4.1 Changes in the economic parities from July 2020 to July 2021

The calculation of correction coefficients used for salary adjustment in places other than Brussels and Luxembourg involves the revision of some elementary parities each year. Changes in the global parities from one year to the next come mainly from survey prices and rent revisions, but may also be affected by the trend in the price indices used to update the elementary parities at the date of the adjustment and by changes in the consumption structures. A decomposition of all the effects underlying the changes in the economic parities for the period July 2020 - July 2021, is given in **Table 4.2**.

The simple average change in the global economic parity for all duty stations for the period under review was +1.5% with standard deviation 2.3%. The maximum increase was +5.0% (CY-Nicosia). The maximum decrease was -2.2% (NL-The Hague). For 19 locations there was an increase and for 9 locations there was a decrease. The movements in the global economic parities for the period are summarised in the table below:

Range		Duty stations
$X < -3.1\%$	0	
$-3.1\% \leq X < -0.8\%$	5	CZ, DE-Karlsruhe, NL, SI, SK
$-0.8\% \leq X < 1.5\%$	9	DE-Berlin, DE-Munich, FR, IT-Rome, IT-Varese, MT, PL, PT, FI
$1.5\% \leq X < 3.8\%$	7	DK, IE, ES, HR, LV, AT, SE
$3.8\% \leq X < 6.1\%$	7	BG, EE, EL, CY, LT, HU, RO
$6.1\% \leq X$	0	
Total	28	excluding Brussels and Luxembourg ³⁶

1.4.2 Impact of changes in the expenditure weights

Consumption weighting structures are used to aggregate the basic heading parities to produce the global economic parity. They determine the relative importance of the parities for every basic heading, and can therefore have a potentially important impact. **No weighting structures were updated during the period under review.**

The current structures were established as follows:

- Data from the autumn 2017 survey in **Brussels** was combined with spring 2018 data from staff in partner organisations and the resulting structure was introduced in the July 2020 calculation exercise. The consumption structure for Brussels affects all other duty stations, as Brussels is the reference city for parity calculation, setting the ‘Laspeyres’ component of the Fisher index calculation (duty station structures set the ‘Paasche’ component).

³⁶ Op cit (36) Brussels is the reference city. Luxembourg = Brussels.

- Data from the autumn 2018 survey in Ireland was integrated in the July 2020 calculation exercise.
- Updated structures for 22 other duty stations were introduced for the July 2018 calculation exercise, based on family budget surveys conducted as indicated below:
 - (2) Bulgaria and Croatia: spring 2016.
 - (6) Greece, Spain, Italy (incl. Italy-Varese), Austria and Portugal: autumn 2016.
 - (14) Czech Republic, Denmark, Estonia, Cyprus, Lithuania, Latvia, Hungary, Malta, Poland, Romania, Slovenia, Slovakia, Finland, Sweden: spring 2017.

Updating surveys amongst staff in remaining Intra-EU duty stations are currently planned during spring 2022 in 5 locations: France; Germany-Karlsruhe; Germany-Munich; Germany-Berlin/other; Netherlands. The existing weighting structures for these places are based on surveys conducted between 2011 and 2013. No surveys were conducted during 2019-2021 due to the impact of the Covid-19 pandemic and policy responses to it. Survey participation will be open to all staff working for EU institutions in and outside the common system, to EU agencies, and to staff of partner organisations (notably collaboration with the International Service for Remunerations and Pensions of the Coordinated Organisations). This includes 39 administrations/locations.

Other things being equal, the next round of family budget surveys amongst Intra-EU staff will commence in 2024, after surveys have been conducted amongst Pensioners in EU27 Member States and amongst Extra-EU staff in delegations around the world. See also **sections 2.2.3** and **section 3.3.2**.

1.4.3 Impact of new parities derived from price surveys

For the current annual exercise, new parities obtained from the following consumer price surveys have been integrated for the following groups:

- Services (survey conducted in spring 2020)
- Furniture; Healthcare (survey conducted in autumn 2020)

In the usual way, prices were obtained from the European Comparison Programme (ECP) for capital cities, and complemented with consistent data from national statistical offices for duty stations in Italy (Varese) and Germany (Karlsruhe, Munich)³⁷.

The introduction of price data from the **spring 2020 ECP survey on Services** affects 26 elementary parities out of the 80 basic heading classification, which together account for 219.7‰ of the total consumption weight in Brussels and 222.2‰ on average in other EU duty stations with range between 186.9‰ and 268.6‰ and standard deviation 15.3‰. In accordance with the methodology agreed in 2015, price data for Electricity and for Gas are taken directly from the regular Energy statistics compilation by Eurostat.

³⁷ Op cit (16) Note: CC production for DE-Bonn has now ceased

Two basic headings required calculation of parities which combine price data from the Services survey with price data from earlier ECP surveys: “Pets and related products & veterinary services” and “Telephone and telefax equipment & services”. Data for repairs to footwear from Services survey was not combined with price data for footwear items from earlier ECP survey due to low relative weight of repairs, however it was used in certain imputation calculations. The 2020 ECP survey did not collect prices to cover certain basic headings for certain countries. The tables below summarise how these parities were imputed:

Gap to be filled		Basis for imputation (hierarchical)	
BH	Title	BH	Title
25	Refuse and sewage	23	Services for the regular maintenance and repair of the dwelling
		24	Water supply
		26	Electricity
		27	Gas
		28	Solid, liquid and heat energy
49	Passenger transport by water	46	Passenger transport by railway
		47	Passenger transport by road
		48	Passenger transport by air
50	Combined passenger transport	46	Passenger transport by railway
		47	Passenger transport by road
		48	Passenger transport by air
31	Repair of furniture, furnishings and floor coverings	19	Repairs to footwear
		23	Services for the regular maintenance and repair of the dwelling
		34	Repair of household appliances
60	Maintenance and repair of other major durables for recreation and culture	19	Repairs to footwear
		23	Services for the regular maintenance and repair of the dwelling
		34	Repair of household appliances
70	Package holidays	48	Passenger transport by air
		74	Accommodation

Introduction of these various results has led to an increase in the overall parity for 24 locations and a decrease in the parity for 4 locations - with the impact ranging between +3.2% (IE-Dublin) and -0.7% (NL-The Hague). The average impact was +1.1%, with standard deviation 1.0%.

The introduction of the price data from the **autumn 2020 ECP survey on Furniture; Healthcare** affects 4 elementary parities out of the 80 basic heading classification, which together account for 36.8‰ of the total consumption weight in Brussels and 43.2‰ on average in other EU duty stations with range between 25.0‰ and 64.4‰ and standard deviation 9.2‰. In accordance with the methodology adopted in 2015, the Healthcare calculation also integrates the results of the latest (2019) ECP cost survey on Hospitals. Introduction of these results has generated an increase in the overall parity for 26 locations,

no change for 1 location and negative change for 1 location - with the impact ranging between +0.5% (IE-Dublin, EL-Athens) and -0.4% (CZ-Prague). The average impact was +0.2%, with standard deviation 0.2%.

The 2018-2020 cycle of ECP surveys did not collect prices to cover two basic headings (**‘Insurances’ and ‘Other services, including financial services n.e.c.’**) which are particularly comparison-resistant. Together they account for 36.5% of the total consumption weight in Brussels and 25.0% on average in other EU duty stations with range between 13.1% and 44.4% and standard deviation 7.3%. In accordance with the approved methodology, parities for these basic headings have been updated by imputation of a reference parity equal to the global parity excluding rent as at July 2020. This has generated an increase in the overall parity for 9 locations, no change for 5 locations and a decrease for 14 locations - with the impact ranging between +0.4% (EE-Tallinn, CY-Nicosia) and -0.5% (RO-Bucharest). The average impact was 0.0%, with standard deviation 0.2%.

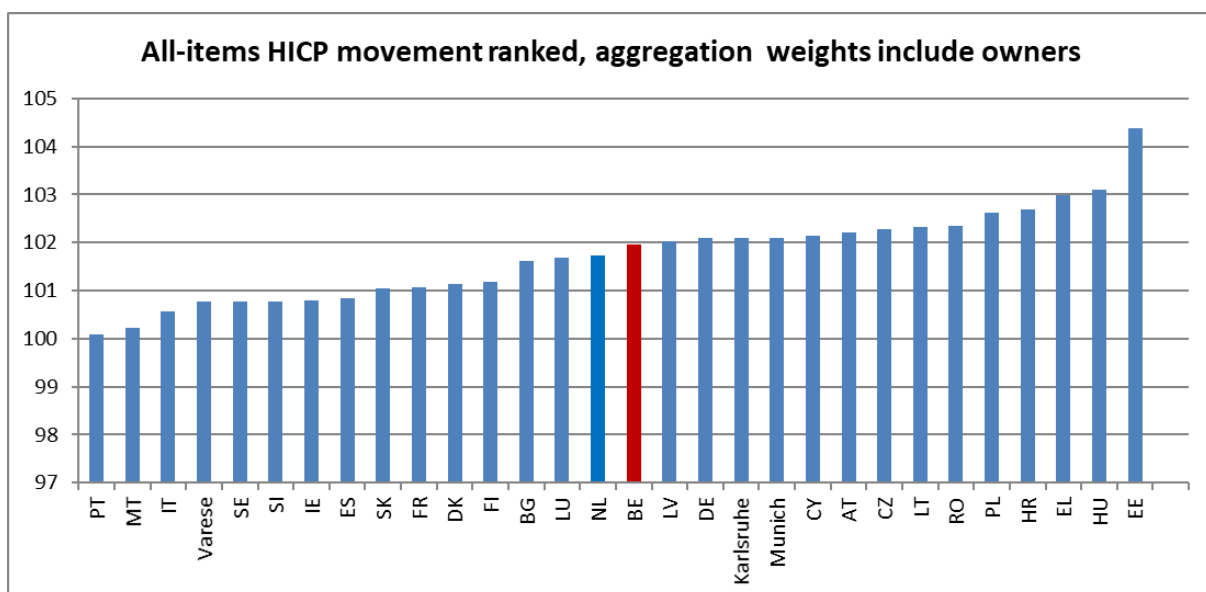

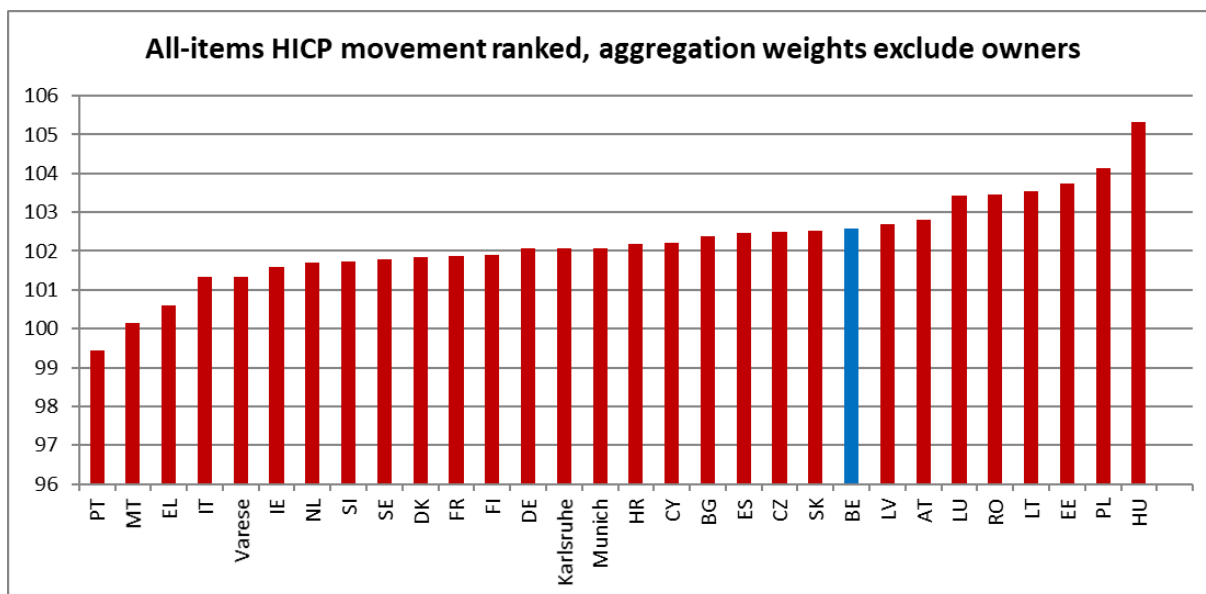

1.4.4 Impact of indexation

As regards price indexation, it has to be remembered that the impact for each duty station reflects the movement of the national Harmonised Index of Consumer Prices (HICP) relative to the evolution of prices in Brussels³⁸.

The impact on the overall parity of applying detailed sub-indices at basic heading level for the year to July 2021 generated a decrease (i.e. inflation was lower than in Brussels) in 13 places, an increase (i.e. inflation was higher than in Brussels) in 11 places and no change (i.e. inflation was the same as in Brussels) in the remaining 4 places - with the impact ranging between +2.3% (EE-Tallinn) and -2.4% (PT-Lisbon). The average impact was -0.3% and standard deviation 1.0%.

Here it should be recalled that there are important differences between HICP and PPP methodologies, notably regarding weights used for aggregation purposes (treatment of owners and tenants). For this reason, the “price updating effect” presented in the table cannot be directly compared with the relative movement of the all-items HICP published separately on the Eurostat website – although other things being equal that movement does give an indication of the general magnitude and direction of change. Therefore, purely for information purposes, the following graphs summarise how national HICPs have developed relative to Belgium during the year to July 2021. It is clear from both graphs that the overall price index has risen more quickly in fewer than half of the duty station countries and less quickly in the remaining ones.

³⁸ See [Appendix 1b Section 1](#) for details of the movement in the Joint Belgium-Luxembourg Index (JBLI).

There is a second potential impact due to any change in the numbers of active staff in Brussels and Luxembourg, as these are used as weights in the construction of the index used to measure the evolution of prices in Brussels. For the new base period July 2020 (December 2019) compared with the previous base period July 2019 (December 2018) the ratio remained broadly stable³⁹.

1.4.5 Impact of new education parities

An updating calculation was done in accordance with the methodology adopted in 2020, which combined 2021 data for European schools, 2020 data for national schools and higher education from the joint Unesco-OECD-Eurostat exercise (quality-adjusted data obtained

³⁹ See [Appendix 1b Section 4](#) for details of the staff numbers

from the ECP), tuition fees in higher education from the Eurydice⁴⁰ report and the results of a detailed 2021 survey of private school tuition fees in all Intra-EU duty stations. The private schools are grouped in 12 refined categories (3 more broad categories were used in previous surveys).

The education basic heading accounts for 26.7‰ of the total consumption weight in Brussels and 28.0‰ on average in other EU duty stations with range between 14.8‰ and 60.9‰ and standard deviation 9.3‰. Introduction of the new parities has generated an increase in the overall parity for 13 locations, no change for 1 location and a decrease for 14 location - with the impact ranging between +2.5% (BG-Sofia) and -1.2% (DE-Karlsruhe and SI-Ljubljana). The average impact was +0.2%, with standard deviation 1.0%.

1.4.6 Impact of new rent parities

An Estate Agency Rent Survey is carried out every year in all Member States to compile rent data. A six-year moving average model is used for calculating rent parities: the rent parities for 2021 are based on the relative trend in the real-estate markets in Brussels and other places of employment between 2015 and 2021.

The rent parities are, therefore, affected by the following factors:

- introduction of rent data collected in 2020 for each dwelling type, for locations where data sets were found suitable for use⁴¹;
- introduction of rent data for each dwelling type for year 2021;
- deletion of the rent data for 2015;
- price indices used for updating the rents for 2016 - 2020 to price level of 2021;
- relative weighting of rents data for each of the years 2016 – 2021 (“taper weights” *)
- relative weighting of rents data for each dwelling type (*).

(*) relative weighting structure is derived from the 2021 housing survey conducted amongst active staff in all Intra-EU duty stations in collaboration with other international organisations. Dwelling type weights were introduced for 2021 exercise; taper weights were introduced for 2021 exercise.

The housing survey was conducted simultaneously in all Intra-EU duty stations during spring 2021 amongst EU staff in collaboration with Coordinated Organisations and other international organisations⁴². High response rates have allowed calculation of robust dwelling type patterns for majority of duty stations. The new and the old sources are summarised hereafter:

⁴⁰ Eurydice data defines “fee” as any sum of money paid by students, with which they formally and compulsorily contribute to the cost of their higher education.

⁴¹ Exceptionally, as rent data collected in 2020 were affected by constraints from national restrictions imposed in connection with the COVID-19 pandemic, in some cases they were not found appropriate for use in the 2021 annual exercise (6-year model). In those cases average rent data collected in 2019 updated using the appropriate national index for period 2019m06-2020m06 were used instead. In the 2020 annual exercise, for all duty stations, average rent data collected in 2019 updated using the appropriate national index for period 2019m06-2020m06 were used instead of rent data collected in 2020.

⁴² The previous staff housing survey was conducted in 2016.

Basis of dwelling type weights

	BXL	BG	CZ	DK	DE ^{Ber}	DE ^{Kar}	DE ^{Mun}	EE
New	2021	Pool 2	Pool 4	2021	2021	2021	2021	Pool 1
Old	2016	2016	2016	2016	2016	2016	2016	Pool

	IE	EL	ES	FR	HR	IT ^{Rom}	IT ^{Var}	CY
New	2021	2021	2021	2021	Pool 2	2021	2021	2021
Old	2016	2016	2016	2016	EU pool	2016	2016	2016

	LV	LT	LUX*	HU	MT	NL	AT	PL
New	Pool 1	Pool 1	2021	2021	2021	2021	Pool 3	2021
Old	Pool	Pool	2016	2016	Pool	2016	Pool	2016

	PT	RO	SI	SK	FI	SE
New	2021	Pool 2	2021	Pool 4	2021	2021
Old	2016	EU Pool	2016	EU pool	2016	2016

Notes for New

Pool 1 = EE, LV, LT Pool 2 = BG, HR, RO, SI, Balkans Pool 3 = AT, DE-Munich Pool 4 = CZ, SK, HU, AT, PL

* Whilst survey results were compiled for Luxembourg, and values are applied for other international organisations, there is no separate official calculation of correction coefficients for Luxembourg for EU purposes.

The new taper weights in six-year model are integrated for the July 2021 rent parity calculation. The following table shows the taper weights applied (together with the previous values for comparison):

Year	SHS 2021	SHS 2016
t0 (current)	12.42	25
t-1	23.40	21
t-2	23.22	18
t-3	16.67	14
t-4	13.02	11
Earlier	11.27	11
	100	100

The new results suggest a significant change in propensity to change dwelling. This is attributed to a variety of factors, including restrictions on mobility and the economic slowdown linked to Covid-19 pandemic.

Details of the average rent values by type of dwelling at July 2021, together with comparative information for July 2020, are provided in **Table 4.3**.

Details of the changes in the rent parities from July 2020 to July 2021, including a decomposition of all the effects, are given in **Table 5.1** and **Table 5.2**.

The simple average change in the rent parity for all duty stations was +0.5%. There were increases in the rent parity for 14 duty stations, no change for 1 location and decreases for 13 locations. All movements in the rent parity in absolute terms were less than 4% for all locations.

The rents basic headings account for 278.5‰ of the total consumption weight in Brussels and 236.9‰ on average in other EU duty stations with range between 160,9‰ and 358.4‰ and standard deviation 47.8‰. Consequently, the rent parities can influence in a quite significant way the global economic parities. The introduction of the new rent parities has led to an increase in the overall parity or stability for 19 locations and decreases for 9 locations with the impact ranging between +1.1% (EL-Athens) and -1.3% (CZ-Prague). The average impact on the overall parity was +0.2% with standard deviation 0.6%.

1.4.7 Impact of rents on the overall parity for staff

In **Table 5.3** and **Table 5.4**, the analysis of correction coefficients and parities calculated with and without the rent element for the same place of employment makes it easier to isolate the effect of rent differences separately from the impact of differences arising from other causes.

In 2021, for 13 out of the 28 duty stations (i.e. excluding Brussels and Luxembourg), the rent correction coefficient (ratio between the rent parity and the exchange rate) is under 100. This means that the average rents are generally lower in these places than in Brussels. For the remaining 15 duty stations, the rent correction coefficient is greater than 100.

The correction coefficients for rents (compared to Brussels =100) are very high in IE-Dublin (221.4), SE-Stockholm (188.8), DK-Copenhagen (184.6), FR-Paris (184.6) and DE-Munich (168.3), whereas they are quite low in BG-Sofia (53.3), CY-Nicosia (63.0) and IT-Varese (77.0).

In 2021, the rent correction coefficient is lower than the correction coefficient without rent in 3 of the duty stations (BG, IT-Varese and CY). This means that, for those places, the rents lead to a reduction of the global correction coefficient.

When rents are integrated in the computation, the correction coefficient is increased by 10% or more in IE-Dublin (+24.2%), FR-Paris (+16.7%), SE-Stockholm (+14.8%), CZ-Prague (+14.3%), DE-Munich (+14.1%), DK-Copenhagen (+11.7%) and HU-Budapest (+11.4%). By contrast, the impact is quite negative in CY-Nicosia (-8.2%), IT-Varese (-5.6%) and BG-Sofia (-4.5%). The average rent effect is +6.6% with standard deviation 7.1%.

1.4.8 Summary of component impacts on global parity

The tables below summarise the impact of the various components on the global parity, which are discussed in the preceding paragraphs:

Component	BH	Expenditure weight %				
		BE	Other (Avg.)	Other (St.Dev)	Other (Min.)	Other (Max.)
FBS Brussels	80	1000.0	1000.0	0	1000.0	1000.0
E20-1 Services (incl. Energy)	26	219.7	222.2	15.3	186.9	268.6
BH79 + BH80 imputation	2	36.5	25.0	7.3	13.1	44.4
E20-2 Furniture; Health	4	36.8	43.2	9.2	25.0	64.4

2. EQUIVALENCE OF PURCHASING POWER OF EU PENSIONERS IN THE MEMBER STATES

2.1 Economic parities, exchange rates and correction coefficients

Tables 6 and 7 in the main report show the global values for pensioners for all Member States plus the United Kingdom.

The correction coefficients applicable to the EU pensioners are determined on the basis of the relationships between the economic parities and the exchange rates fixed by the Commission and specified in the Staff Regulations for the relevant countries.

The correction coefficient operates as a percentage adjustment to pensions (only for the pension rights acquired before 1 May 2004; the correction coefficient being 100% for the pension rights acquired from that date) to take account of the cost of living differences between Belgium and the Member States, except Luxembourg where, according to the Staff Regulations, a correction coefficient of 100% is applied. The correction coefficient applies in full for transfers into, or out of, the pension scheme of European Officials.

As pensions are first expressed in Euros, then converted to local currency using exchange rates, before being multiplied by the correction coefficients, it is clear that the exchange rate effect cancels out and the relevant factor is any change in the economic parities⁴³.

2.2 Changes between July 2020 and July 2021

An intermediate report was prepared in the usual way covering the six months July 2020 – January 2021⁴⁴. That report identifies the locations where, in accordance with Chapter 2 of Annex XI to the Staff Regulations, the change in the implicit index (i.e. the combined impact of the Joint Belgium Luxembourg Index and the change in the purchasing power parity relative to Belgium) exceeded 3%. For the period July 2020 – January 2021 the implicit index did not exceed the threshold for any Member State (or UK). Consequently, there was no change to the correction coefficients for pensioners.

2.2.1 Changes in the correction coefficients from July 2020 to July 2021

The simple average change for all Member States in the correction coefficient for the period under review was +2.6% with standard deviation 2.0%. The maximum increase was +6.0% (Estonia, Hungary and Sweden); the maximum decrease was -0.4% (Slovenia). For 22 Member States the change was positive and for 3 Member States the change was negative. The movements in pensioner correction coefficients for the period July 2020 - July 2021 are summarised in the table hereafter⁴⁵:

⁴³ For a numerical example to illustrate this, see [Appendix 1c Section 1.1](#); for details of changes in exchange rates, see [Appendix 1c Section 1.1.2](#)

⁴⁴ Op cit (7) Ares(2021)3465742

⁴⁵ Note: For countries in the Eurozone, the change in the correction coefficient = the change in the parity. **Table 6*** shows movements for the remaining countries.

Range		Duty stations
$X < -1.4\%$	0	
$-1.4\% \leq X < 0.6\%$	5	DE, NL, PL, PT, SI
$0.6\% \leq X < 2.6\%$	6	FR, IT, LT, MT, RO, FI
$2.6\% \leq X < 4.6\%$	9	BG, DK, IE, EL, ES, HR, CY, LV, AT
$4.6\% \leq X < 6.6\%$	5	CZ, EE, HU, SK, SE
$6.6\% \leq X$	0	
Total	25	excluding Belgium and Luxembourg ⁴⁶

For the UK, the change was more than +6.6%.

2.2.2 Economic parities

The economic parities for pensioners with a reference date of 1 July have been calculated in accordance with the agreed methodology on the basis of the following information:

- a) Basic heading parities for all goods and services, except for rents, as used for the calculation of the correction coefficients for active staff. These parities are based on bilateral comparison of prices between different capital cities and Brussels⁴⁷.
- b) For calculating country rent parities a two-stage procedure has been applied. Firstly a spatial adjustment factor is calculated in the form of national/capital ratio of market rents. Secondly, with the help of this adjustment factor the capital city rent parity is transformed into the country rent parity.

To establish the capital/national adjustment ratio, average rent values from Article 64 exercise for duty station and Brussels (i.e. bilateral parity with Brussels) as used for the calculation of correction coefficients for active staff are compared with average rent values from European Comparison Programme exercise for duty station country and Belgium (i.e. bilateral parity with Belgium)⁴⁸. That approach is applied for all Member States except Belgium (CPI), Estonia (1:1 ratio), Malta (1:1 ratio), Austria (microcensus).

- c) Basic heading parities are aggregated using specific consumption weights for the pensioners.

2.2.3 Expenditure weights

The consumption weighting structure used to aggregate the basic heading parities to produce the global economic parity for pensioners was not updated during the period under review for any Member State.

⁴⁶ Belgium is the reference country for the bilateral comparisons (CC for pensioners). In accordance with Article 3(2) of Annex XI to the Staff Regulations, Luxembourg = Belgium.

⁴⁷ For more details, see [Appendix 1c Section 1.2](#)

⁴⁸ Source: Eurostat Free Data Table prc_ppp_ind "Purchasing power parities (PPPs), price level indices and real expenditures for ESA 2010 aggregates", AGGREG Housing, water, electricity, gas and other fuels. Since 2020, the NA_Item reference used, has changed from EU28=1 to EU27_2020=1.

The current weights are established on the basis of an across-the-whole-EU family budget survey carried out in 2013 and first introduced for calculation of the July 2016 parities.

Naturally, as the pension scheme continues to mature, the number of pensioners can be expected to increase, and they may choose to reside in different locations. These factors may have an impact on the eventual spending patterns. Other things being equal, the next family budget survey amongst pensioners will now be scheduled in 2023, following completion of the current cycle of surveys amongst active staff (see also [section 1.3.2](#) and [section 3.3.2](#)).

2.2.4 Detailed economic parities

The details of the calculated economic parities at the level of 12 main consumption groups are shown in **Table 6.1** for all countries apart from Belgium and Luxembourg. This table also includes information about the consumption weights by country and by expenditure groups.

Table 6*

**Changes in the economic parities, exchange rates and correction coefficients in the twelve months to 1st July 2021
(for pensioners)**

2.3 Purchasing power parities for pensioners - analysis of results

2.3.1 Changes in the economic parities from July 2020 to July 2021

A decomposition of the changes in the economic parities for the period July 2020 - July 2021 is shown in **Table 6.3**.

The simple average change across all countries in the global economic parity for pensioners for the period under review was +2.3% with standard deviation 1.8%. The maximum increase was +6.0% (Estonia). The maximum decrease was -0.7% (Czechia). For 21 Member States the change was positive and for 4 Member States the change was negative. The movements in the global economic parities for the period are summarised in the table below:

Range		Duty stations
$X < -1.3\%$	0	
$-1.3\% \leq X < 0.5\%$	5	CZ, DE, NL, PT, SI
$0.5\% \leq X < 2.3\%$	6	FR, IT, LT, MT, PL, FI
$2.3\% \leq X < 4.1\%$	9	BG, DK, IE, ES, HR, LV, AT, RO, SE
$4.1\% \leq X < 5.9\%$	4	EL, CY, HU, SK
$5.9\% \leq X$	1	EE
Total	25	excluding Belgium and Luxembourg ⁴⁹

For the UK, the change was in the range $0.5\% \leq X < 2.3\%$.

One of the main differences in the calculation of parity values for pensioners by comparison to those established for active staff arises from the aggregation using specific expenditure weights for pensioners rather than consumption patterns for active staff⁵⁰. This can affect the magnitude of the impact of the individual components (introduction of new price surveys, price updating using indices, new rents, etc.). Consequently the movements in the overall parity differ from those reported for active staff, details of which are provided elsewhere in this report.

The other adjustment in the calculation of parity values for pensioners is the conversion of capital city rent levels to national average rent levels. The ratio values applied for the current year⁵¹ and the change by comparison to the previous year are shown in **Table 6.2**. For 2021 the ratio for Belgium/Brussels is 0.80 (a decrease of -7.68%)⁵². The average ratio for other countries/capitals is 0.68 with standard deviation 0.21. The minimum ratio is 0.37 (PL/Poland). The maximum ratio is 1.00 (EE/Estonia and MT/Malta). Excluding Belgium/Brussels, the rent ratio has decreased by comparison to the previous year for 17 countries/capitals, has remained stable for 5 countries/capitals and has increased for 4 countries/capitals. The average change is -1.4% with standard deviation 3.9%. The largest

⁴⁹ Op cit (47) Belgium is the reference country for the bilateral comparisons (CC for pensioners). In accordance with Article 3(5) of Annex XI to the Staff Regulations, Luxembourg = Belgium.

⁵⁰ The most recent family budget survey amongst pensioners in EU28 Member States was conducted in 2013 and results were integrated for 2016 calculation exercise.

⁵¹ Expressed as country rent level = numerator of fraction, capital city rent level = denominator of fraction.

⁵² Since 2020 there is a change in the way the Belgium/Brussels rent ratio is being calculated: registered leases databases are now the source for rents, while in previous years web surveys were used.

increase is +16.34% (SK/Bratislava). There were decreases of more than 5% for 7 countries/capitals: -8.50% (PT/Lisbon), -8.02% (HR/Zagreb), -6.02% (SI/Ljubljana), -5.96% (LT/Vilnius), -5.54% (PL/Warsaw), -5.34% (DE/Berlin), and -5.24% (CY/Nicosia). For UK/London there was a slight decrease of -0.06%.

In line with agreement at 2020 meeting of Article 64&65 Working Group, the ratio calculation method has been updated to ensure consistent reference period (six years) for both numerator and denominator. Due to Brexit, ECP rent parities in free data tables have changed from EU28=1 to EU27_2020=1.

2.3.2 Impact of rents on the overall parity for pensioners

Details of the impact of rent on the overall correction coefficient are given in **Table 7.1** and on the overall parity in **Table 7.2**.

In 2021, for 13 out of the 25 Member States (i.e. excluding Belgium and Luxembourg), the rent correction coefficient (ratio between the rent parity and the exchange rate) is under 100. This means that the average rents are generally lower in these places than in Belgium. For the remaining 12 countries (and the UK), the rent correction coefficient is greater than 100.

The correction coefficients for rents (compared to Belgium =100) are very high in the UK (220.7), Ireland (187.2), Denmark (181.2), Austria (153.8) and Finland (153.1), whereas they are quite low in Bulgaria (36.9), Poland (40.3) and Romania (45.1).

Moreover, in 2021, the rent correction coefficient is lower than the correction coefficient without rent for 11 of the Member States. This means that, for these places, the rents lead to a reduction of the global correction coefficient.

When rents are integrated in the computation, the average impact is +2.1% with standard deviation 6.9%. The correction coefficient is increased by 10% or more in the UK (23.8%) and in Ireland (+15.0%), Denmark (11.1%), Austria (10.5%) and Malta (10.4%) and between 5-10% in 6 Member States (Germany, Estonia, Spain, France, Netherlands and Finland). By contrast, the impact is quite negative in Poland (-8.5%), Bulgaria (-8.4%) and Croatia (-7.2%).

2.3.3 Summary of component impacts on global parity for pensioners

Across all Member States the simple average impact on the global parity for pensioners for the current annual exercise of the individual component factors are summarised below:

Component	BH	Expenditure weight %				
		BE	Other (Avg.)	Other (St.Dev)	Min	Max
E20-1 Services (incl. Energy)	26	231.9	246.5	23.1	214.2	298.5

2.4 Comparison of correction coefficients for active staff and pensioners⁵³

Table 7.3 compares the country correction coefficients for pensioners (from Table 7.1) with the capital city correction coefficients for active staff (from Table 5.5), at July 2021.

Among all Member States, Denmark (Copenhagen) has the highest capital-based global CC (134.2) and the highest country-based global CC (136.9) whilst Ireland (Dublin) has the second highest capital-based CC (133.6) and the second highest country-based CC (125.4); Bulgaria (Sofia) has the lowest capital-based global CC (61.7) and the second lowest country-based global CC (58.6). Romania (Bucharest) has the second lowest capital-based CC (68.5) and the lowest country-based CC (57.9).

The biggest absolute differences between capital city global CC values and country global CC values can be observed in Prague/CZ (-13.0), Budapest/HU (-12.5), Bucharest/RO (-10.6), Stockholm/SE (-10.3) and Vilnius/LT (-9.9). By contrast, in Berlin/DE (-0.1), and The Hague/NL (-0.1) the two CC values are nearly at the same level.

In 7 of the 25 Member States (i.e. excluding Belgium and Luxembourg) - Denmark, Estonia, Italy, Cyprus, Malta, Austria and Finland - the country CCs relative to Belgium are higher than the capital city CCs relative to Brussels. In the remaining 18 Member States, the country CCs are lower than the capital city CCs

For the CCs without rents, the capital-based and country-based values are very much closer.

It should be mentioned that the Staff Regulations set out specific rules for the application of the pensioner CC⁵⁴.

⁵³ Comparison not done for UK as Intra-EU CC for staff is no longer produced

⁵⁴ See [Appendix 1c, Section 2.1](#) for a summary of these rules

Table 7.3

3. EQUIVALENCE OF PURCHASING POWER OF EU OFFICIALS OUTSIDE THE EUROPEAN UNION

3.1. Economic parities, exchange rates and correction coefficients

The correction coefficients applicable to the salaries of the European institution officials working in Extra-EU duty stations, are determined on the basis of the relationships between the economic parities and the exchange rates fixed by the Commission and specified in the Staff Regulations for the relevant countries.

The correction coefficient operates as a percentage adjustment to salaries to take account of the cost of living differences between Brussels and the various duty stations. Changes in the the correction coefficients from one year to another are therefore a component of the annual adjustment of remuneration. However, as salaries are first expressed in Euros, then converted to local currency using exchange rates, before being multiplied by the correction coefficients, it is clear that the exchange rate effect cancels out and the relevant factor is any change in the economic parities. If a correction coefficient changes solely due to a change in the exchange rate (i.e. there is no change in the economic parity), then local purchasing power will not be impacted⁵⁵.

As at July 2021, correction coefficients are compiled for a list of 141 Extra-EU duty stations. By comparison to the situation at July 2020 (147 locations):

- 2 new Delegations are inserted with effect from February 2021 (Qatar; São Tomé et Príncipe),
- 8 locations are now excluded from the list, with effect from February 2021 (Belize; Bosnia and Herzegovina (Banja Luka); Comoros; Indonesia (Banda Aceh); Samoa; Solomon Isles; Suriname; Vanuatu), in order to align the list of locations for which CC are produced with the official list of Extra-EU Delegations⁵⁶.

Included in the list are 9 locations for which no values are presented (Afghanistan; Iraq; Lebanon; Libya; Somalia; Syria; Venezuela; Yemen; Zimbabwe) mainly due to security constraints affecting the statistical reliability of the information, or due to uncertainty regarding the volatility of the reported inflation,

Note: staff working at Extra-EU duty stations which are physically located inside European Union borders⁵⁷ have Intra-EU correction coefficient applied to their salaries.

Tables 8 and 9 in the main report show the results for all duty stations. However, the application of Extra-EU correction coefficients is only likely to be requested in practice where the cost of living is higher than in Brussels. **Table 9.1** therefore only shows the places where the correction coefficient is greater than or equal to 100 at July 2021 (or was greater than or equal to 100 at July 2020).

⁵⁵ For a numerical example to illustrate this, see [Appendix 1c Section 1.1](#)

⁵⁶ See **Table 9.4** for a list of Delegations which coordinate multiple locations.

⁵⁷ Delegation to the OECD and the UNESCO in Paris and the principalities of Andorra and Monaco [France]; Delegation to the Council of Europe in Strasbourg [France]; Delegation to the Holy See, Order of Malta, UN Organisations in Rome, and to San Marino [Italy]; Delegation to the International Organisations in Vienna [Austria].

At July 2021 there were 23 duty stations with CCs greater than 100 (and 109 duty stations for which CCs are below 100, plus 9 duty stations for which CCs are not produced). By comparison in July 2020 there were 26 duty stations with CCs greater than 100 (and 112 duty stations for which CCs were below 100, plus 11 duty stations for which CCs were not produced).

3.2. Changes between July 2020 and July 2021

Two interim reports were prepared in the usual way between the last annual report and the current annual report, covering the six months August 2020 - January 2021⁵⁸, and the five months February 2021 - June 2021⁵⁹. Those reports identify the locations where, in accordance with Article 13 of Annex X of the Staff Regulations, changes in the parity exceeding 5% from the previous value in force (July 2020 or subsequently) resulted in application of a new correction coefficient. For the period August 2020 - January 2021, 39 duty stations were affected (some more than once), of which 9 locations had CC values above 100. For the period February 2021 - June 2021, 62 duty stations were affected (some more than once), of which 13 locations had CC values above 100.

3.2.1 Changes in correction coefficients from July 2020 to July 2021

No percentage change is calculated for the 9 locations where no CC is published, or for the 8 locations which have been deleted from the list and the 2 locations which have been added to the list. In the following paragraphs, these locations are marked with an asterisk(*).

Comparing the situation at July 2020 and the situation at July 2021 for the remaining locations, CCs have decreased for 60 duty stations, and were stable or increased for 70 duty stations.

During the 6 months covered by the first interim report, CC moved above 100 for 3 locations (Australia, Chad, Haiti) and moved below 100 for 5 locations (Barbados, Eritrea, Solomon Islands*, United States (New York), Zimbabwe*).

During the 5 months covered by the second interim report, CC moved above 100 for 3 locations (Djibouti, Qatar*, United Kingdom) and moved below 100 for 6 locations (Chad, Lebanon*, South Sudan, Sudan, Vanuatu*).

Comparing July 2021 and July 2020, 5 locations which had no CCs at July 2020 or CCs lower than 100 at July 2020 now have CCs higher than 100 (Australia, Djibouti, Haïti, Qatar*, United Kingdom); 8 locations which had CCs higher than 100 at July 2020 now have CCs lower than 100 (Barbados, Eritrea, Lebanon*, Solomon Island*, South Sudan, Sudan, Vanuatu*, Zimbabwe*). The average CC change was +1.9% with standard deviation 12.8%. The maximum increase was +41.5% (Iran). The maximum decrease was -70.0% (South Sudan). The CC increase was greater than two standard deviations from the mean for 9 duty stations (Argentina, Brazil, Dominican Republic, Haiti, Iran, Pakistan, South Africa, South Sudan, Sudan).

⁵⁸ Op cit (7) Ares(2021)3005164

⁵⁹ Op cit (7) Ares(2021)6358373

3.2.2 Changes in exchange rates from July 2020 to July 2021

No change is calculated for the 9 locations where no CC is published, or the 8 locations which have been deleted from the list and the 2 locations which have been added to the list.

For 2 duty stations (Kosovo, Montenegro), the local currency is the Euro and for 2 duty stations (Bosnia and Herzegovina (Sarajevo), New Caledonia) the exchange rate is pegged to the Euro. For 13 locations, the local currency is the CFA for which the exchange rate to the Euro has not changed. For 2 other locations (Cape Verde, North Macedonia) exchange rates did not vary during the period.

A large part of the explanation for the movements in the correction coefficients of remaining 111 locations is fluctuations in their currency exchange rates relative to the Euro. Currency fluctuations relative to the Euro were positive (i.e. purchasing power of Euro decreased) in 23 locations and negative in 88 locations (i.e. purchasing power of Euro increased). The average exchange rate fluctuation was -14.1% with standard deviation 74.7%. The maximum increase was +13.2% (Haïti). The maximum decrease was -768.2% (Sudan). The currency decrease exceeded two standard deviations from the average for 2 duty stations (South-Sudan, Sudan).

For 6 locations (Cuba, Ecuador, El Salvador, Panama, Timor Leste and Zimbabwe), the local currency is either USD or is pegged to the USD, for which exchange rate to the Euro has remained fairly stable. For 1 location (Zimbabwe) the currency in which PPP was expressed was USD, but the parity for this location is no longer being published.

3.2.3 Changes in economic parities from July 2020 to July 2021

No change is calculated for the 9 locations where no CC is published, or for the 8 locations which have been deleted from the list and the 2 locations which have been added to the list.

The simple average change across all duty stations in the global economic parity for officials serving outside the EU for the period under review was +11.0% with standard deviation 45.2%. The maximum increase was +501.2% (Sudan). The maximum decrease was -31.4% (Liberia). The change was positive or zero in 99 duty stations and negative in 31 duty stations.

Without Sudan, considered as an outlier, the simple average across the duty stations is 7.2% with a standard deviation of 13.0%. The movements in the global economic parities for the period are summarised in the table below.

Range		Duty stations
$X < -18.8\%$	2	Kosovo, Liberia
$-18.8\% \leq X < -5.8\%$	3	Eritrea, Nepal, South Sudan
$-5.8\% \leq X < 7.2\%$	75	
$7.2\% \leq X < 20.2\%$	37	
$20.2\% \leq X < 33.2\%$	8	Brazil, Dominican Rep, Gambia, Kazakhstan, Malawi, Malaysia, Turkey, Zambia
$33.2\% \leq X$	4	Angola, Argentina, Iran, Pakistan
Total	129	excluding Brussels ⁶⁰ and Sudan, and the 9 locations for which no values are presented, the 8 locations deleted from the list and the 2 locations added to the list.

A decomposition of the effects underlying the changes in the economic parities for the period July 2020 - July 2021 is given in **Table 9.2**, for the duty stations where the CC is greater than 100 at July 2021 (or was greater than 100 at July 2020).

3.3. Data sources

3.3.1 Spatial and temporal price data to establish detailed parities

With the exception of the 12 duty stations in Extra-EU countries which participate in the European Comparison Programme (ECP) coordinated by Eurostat⁶¹ or the 9 duty stations in countries which participate in the linked programme coordinated by the Organisation for Economic Cooperation and Development⁶², or the 1 location for which specific survey arrangements are made⁶³, the source of price data is the rolling cycle of surveys conducted by the United Nations International Civil Service Commission. Data is exchanged under a 2009 Memorandum of Understanding signed with the United Nations International Civil Service Commission and the International Service for Remunerations and Pensions of the Coordinated Organisations⁶⁴.

For the July 2021 exercise, new parities derived from UN price surveys have been integrated for 30 locations altogether. By comparison, for the July 2020 exercise, 42 new UN surveys were integrated (11 for the first interim report and 31 for the second interim report). The 30 new parities were integrated for the second interim report (covering the period February 2021 - June 2021), in the following places:

⁶⁰ Op cit (36) Brussels is the reference city for the bilateral comparisons (CC for staff).

⁶¹ Iceland, Norway, Switzerland-Bern, Switzerland-Geneva, Turkey, United Kingdom, Albania, Bosnia & Herzegovina-Sarajevo, North Macedonia, Montenegro, Serbia, Kosovo.

⁶² Australia, Canada, Chile, Israel, Japan, Mexico, New Zealand, South Korea, United States of America-Washington

⁶³ Taiwan (direct survey on Eurostat behalf).

⁶⁴ North Atlantic Treaty Organisation (NATO), Organisation for Economic Cooperation and Development (OECD), Council of Europe (CoE), European Space Agency (ESA), European Centre for Medium-range Weather Forecasts (ECMWF), European Organisation for the Exploitation of Meteorological Satellites (EUMETSAT)

- Angola; Armenia; Barbados; Benin; Brazil; Burundi; Cambodia; Colombia; Cuba; Ecuador; Georgia; Guatemala; Guyana; Honduras; India; Jamaica; Kenya; Kyrgyzstan; Madagascar; Mali; Mozambique; Namibia; Nicaragua; Panama; Peru; Qatar (new location); São Tomé et Príncipe (new location); Tanzania; Trinidad and Tobago; Zambia.

The foregoing duty stations are also indicated in **Tables 8 and 9** in the main report (see footnotes to the tables). Parities established from these surveys are calculated using the same classification of 80 basic headings as employed for Intra-EU purposes (sole exception: housing).

For the July 2021 exercise, new parities for 20 ECP duty stations have been integrated:

- Updated PPPs at July 2020 from comparison programme coordinated by OECD were used for the following 9 duty stations: Australia; Canada; Chile; Israel; Japan; South Korea; Mexico; New Zealand; United States (Washington).
- Updated PPPs at July 2021 from comparison programme coordinated by Eurostat were used for the following 11 duty stations: Albania; Bosnia and Herzegovina (Sarajevo); Iceland; Kosovo; Montenegro; North Macedonia; Norway; Serbia; Switzerland (Bern); Switzerland (Geneva); Turkey. Note: ECP PPPs for the United Kingdom were already integrated for the July 2020 annual report.
- Updated Intra-EU PPP (excluding rent) at July 2021 for 1 duty station: New Caledonia. As an overseas territory with special status, it has significant degree of autonomy but is considered part of France (status confirmed by two independence referendums since 1998, most recently in 2020).

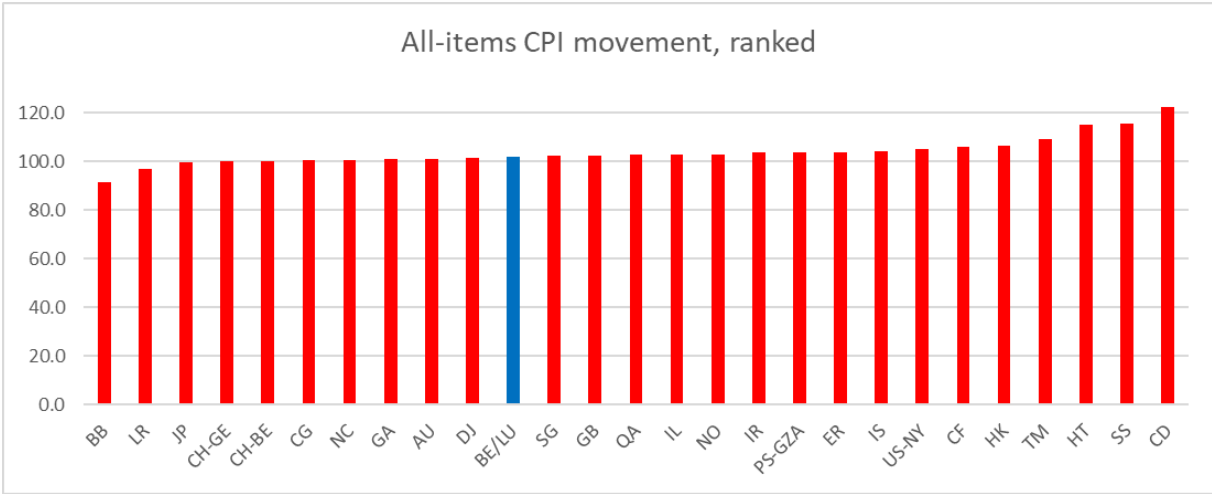

For all locations, initial survey-based parities are subsequently updated using the ratio between national consumer price index and the Joint Belgium-Luxembourg Index. For Iceland, Kosovo, Norway, Switzerland, Turkey and United Kingdom, the national consumer price index is the Harmonised Index of Consumer Prices. For other duty station locations, the price index information is compiled from national sources. For New York it is the official regional price index produced by the US Bureau of Labor Statistics.

With the exception of the duty stations for which new UN price survey data, new ISRP ECP parities or new Eurostat ECP parities are introduced (or the gradual impact of smoothing older price survey data – see **section 3.3.3**), the sole explanatory factor for price movements in the remaining duty stations is the evolution of the local consumer price index relative to the evolution of the Joint Belgium-Luxembourg Index.

There are important differences between CPI and PPP methodologies, notably regarding weights used for aggregation purposes (national consumption patterns vs. international officials). For this reason, the “inflation updating effect” in **Table 9.2** cannot be directly compared with relative movement in the all-items CPI. Purely for indicative purposes, the following graph⁶⁵ summarises how national CPIs have developed for the period July 2020 -

⁶⁵ Note: the graph includes the Joint Belgium-Luxembourg index for comparison and excludes Sudan (hyperinflation c.500%), and any of the 9 locations where CC is no longer published, the 8 locations which have been deleted from the list, or the 2 locations which have been added to the list (i.e. Lebanon, Solomon Isles, Vanuatu, Zimbabwe).

July 2021, for the duty stations where the CC is greater than 100 at July 2021 (or was greater than 100 at July 2020).

3.3.2 Expenditure weights

Detailed price ratios are aggregated up to a global value using the latest available consumption expenditure weighting structures.

Data from the 2017-2018 surveys amongst staff in Brussels has been introduced in the July 2020 calculation exercise, replacing the weights derived from previous survey. The updated consumption structure affects all duty stations, as Brussels is the reference city for bilateral parity calculation. As the new expenditure structure updates the relative importance of the parities for every basic heading, it may therefore have a potentially important impact on the global aggregate parity for some duty stations.

Due to the low population sizes in many individual Extra-EU duty stations and the low response rate from survey participants in some locations during the last family budget surveys conducted amongst EU personnel, regional average expenditure patterns were established in 2018 using results from the most recent family budget survey amongst expatriate UN staff, recognising that under the international collaboration agreement, surveys are done using a harmonised questionnaire and the expatriate international civil servant behaviour profile is broadly similar. Six regions were defined: Africa with 49 duty stations, Asia with 33 duty stations, Oceania with 3 duty stations, Europe (non-EU) with 5 duty stations, North America with 12 duty stations, and South America with 12 duty stations. These regional weights are not used to compute aggregate parities for the 11 Eurostat ECP duty stations or the 9 ISRP ECP duty stations, for which separate consumption weights are available.

Other things being equal, a direct family budget survey amongst Extra-EU staff will be scheduled during 2023, following completion of cycle amongst Intra-EU staff and amongst Pensioners in EU27 Member States (see also [section 1.3.2](#) and [section 2.2.3](#)).

3.3.3 Gradual impact of changes

Whenever integrating the results of new price surveys or new expenditure weights generates a significantly higher or lower parity than the previous value in force, a smoothing mechanism is applied to gradually implement that change. The period over which this smoothing applies

can vary, in accordance with procedural guidelines adopted by the Article 64&65 Working Group. Thus, a large impact may only partially have been taken into account in the current reporting period, with a continued gradual introduction of the change foreseeable during the next reporting period. Similarly, the current reporting period may be affected by continued gradual application of results introduced during the previous reporting period.

Of the duty stations for which new price surveys were integrated, smoothing mechanism will continue to apply after July 2021 for the following locations where the impact of older survey is being gradually applied: Angola; Armenia; Barbados; Benin; Brazil; Burundi; Cambodia; Colombia; Cuba; Ecuador; Georgia, Guatemala; Guyana; Honduras; India; Jamaica; Kenya; Kyrgyzstan; Liberia; Malawi; Malaysia; Mali; Mozambique; Panama; Peru; South Sudan; Tanzania; Trinidad and Tobago; Zambia. A summary is given in **Table 9.3**, for the duty stations where the CC is greater than 100 at July 2021 (or was greater than 100 at July 2020).

In **table 9.1** and **table 9.2** and **table 9.3** hereafter:

- (1) Figures are stated relative to Brussels, i.e. Brussels PPP = 1, ER = 1, CC = 100%
- (2) 1 euro = USD (1 Duty Station: Zimbabwe)
- (3) 1 euro = CFA (3 Duty Stations: Central African Republic - Congo - Gabon)
- (6) UN P2P processed (2 Duty Stations: Barbados - Qatar)
- (7) ISRP PPP processed (3 Duty Stations: Australia - Israel - Japan)
- (8) ECP PPP processed (4 Duty Stations: Iceland - Norway - Switzerland (Bern) - Switzerland (Geneva))
- (9) ECP Balkan Duty stations (0 Duty Stations)
- (10) Duty stations for which Intra-EU CC excluding rent is used (1 Duty Station: New Caledonia)
- (11) Duty stations for which CC production has stopped (2 Duty Stations: Solomon Islands, Vanuatu)

Table 9.1

TABLE 9.4**List of EU Delegations which coordinate multiple locations/international organisations**

1	Delegation to Barbados, the Eastern Caribbean States, the OECS and CARICOM/CARIFORUM
2	Delegation to Botswana and SADC
3	Delegation to Djibouti and IGAD
4	Delegation to El Salvador and to the Central American Integration System (SICA)
5	Delegation to Ethiopia; Delegation to the African Union
6	Delegation for the Pacific. Responsible for Cook Islands, Federated States of Micronesia, Fiji, Kiribati, Nauru, Niue, Palau, Republic of Marshall Islands, Samoa, Solomon Islands, Tonga, Tuvalu, Vanuatu as well as the three Overseas Countries and Territories in the Pacific
7	Delegation to Gabon, to São Tomé and Príncipe and to Equatorial Guinea
8	Delegation to Guyana, for Suriname, and with responsibility for Aruba, Bonaire, Curaçao, Saba, Saint Barthélemy, Sint Eustatius and Sint Maarten
9	Delegation to Hong Kong and Macao
10	Delegation to India and to Bhutan
11	Delegation to Indonesia and Brunei Darussalam; Delegation to ASEAN
12	Delegation to Jamaica, Belize, The Bahamas, Turks and Caicos Islands and Cayman Islands
13	Delegation to Kuwait and Qatar
14	Delegation to Madagascar and Comoros
15	Delegation to Mauritius and to the Seychelles
16	Delegation to Nigeria and ECOWAS
17	Delegation to Saudi Arabia, Bahrain and Oman
18	Delegation to Sri Lanka and the Maldives
19	Delegation to Switzerland and to Liechtenstein
20	Delegation to the UN and other international organisations in Geneva; Permanent mission to the World Trade Organisation
21	Delegation to West Bank and Gaza Strip, UNRWA
22	Delegation to Zambia and COMESA

4. ADJUSTMENT OF REMUNERATION OUTSIDE BRUSSELS AND LUXEMBOURG

4.1 Intra-EU duty stations (for staff)

The value of the annual update for duty stations outside Brussels and Luxembourg is equal to the product of the global specific indicator multiplied by the implicit index (i.e. the combined impact of the percentage change in the cost of living in Brussels and the percentage change in the economic parities between Brussels and the duty station).

Taking account of the figures reported in Table 1 and Table 4 of the main report, **Table 4 bis** below presents the adjustment of the nominal net remuneration of EU officials outside Brussels and Luxembourg which is necessary to maintain a parallel development of the purchasing power with the civil servants in the Member States.

Table 4 bis

Annual update outside Brussels and Luxembourg
for the twelve months to 1st July 2021
(for staff)

Country Place of employment	Global specific indicator	Implicit price index	Annual update
BE/LU Brussels/Luxembourg	-0.2	2.1	1.9
BG Sofia	-0.2	6.6	6.4
CZ Prague	-0.2	0.2	0.0
DK Copenhagen	-0.2	4.2	4.0
DE Berlin	-0.2	1.6	1.4
Karlsruhe	-0.2	1.0	0.8
Munich	-0.2	1.6	1.4
EE Tallinn	-0.2	7.0	6.8
IE Dublin	-0.2	5.8	5.6
EL Athens	-0.2	6.8	6.6
ES Madrid	-0.2	4.3	4.1
FR Paris	-0.2	1.6	1.4
HR Zagreb	-0.2	4.5	4.3

MT Valletta	-0.2	1.3	1.1
NL The Hague	-0.2	-0.1	-0.3
AT Vienna	-0.2	3.6	3.4
PL Warsaw	-0.2	2.8	2.6
PT Lisbon	-0.2	2.4	2.2
RO Bucharest	-0.2	6.7	6.5
SI Ljubljana	-0.2	0.6	0.4
SK Bratislava	-0.2	1.2	1.0
FI Helsinki	-0.2	2.2	2.0
SE Stockholm	-0.2	3.7	3.5

4.2 Intra-EU country of residence (for pensioners)

The value of the annual update for pensioners residing in Member States outside Belgium and Luxembourg is equal to the product of the global specific indicator multiplied by the implicit index

(i.e. the combined impact of the percentage change in the cost of living in Brussels and the percentage change in the economic parities between Belgium and the Member State).

Taking account of the figures reported in Table 1 and Table 6 of the main report, **Table 6 bis** below presents the adjustment of the nominal net pensions of retired EU officials outside Belgium and Luxembourg⁶⁶.

Table 6 bis
Annual update outside Belgium and Luxembourg
for the twelve months to 1st July 2021
(for pensioners)

Country	Global specific indicator	Implicit price index	Annual update
BE/LU	-0.2	2.1	1.9
BG	-0.2	5.7	5.5
CZ	-0.2	1.4	1.2
DK	-0.2	5.0	4.8
DE	-0.2	2.2	2.0
EE	-0.2	8.2	8.0
IE	-0.2	6.1	5.9
EL	-0.2	6.3	6.1
ES	-0.2	5.1	4.9
FR	-0.2	2.9	2.7
HR	-0.2	4.5	4.3
IT	-0.2	3.1	2.9
CY	-0.2	6.4	6.2
LV	-0.2	5.3	5.1
LT	-0.2	4.3	4.1
HU	-0.2	6.7	6.5
MT	-0.2	3.2	3.0
NL	-0.2	1.8	1.6
AT	-0.2	5.5	5.3
PL	-0.2	3.8	3.6
PT	-0.2	1.9	1.7
RO	-0.2	5.4	5.2
SI	-0.2	1.7	1.5
SK	-0.2	6.8	6.6
FI	-0.2	3.0	2.8
SE	-0.2	4.9	4.7
UK	-0.2	3.3	3.1

⁶⁶ Note: in practice, the parity change component of the implicit index is only relevant for Member States with correction coefficient equal to or greater than 100 at July 2021 (which can be seen in **Table 7**) or greater than or equal to 100 at July 2020. For the current exercise, 8 Member States are concerned (Denmark, Germany, Ireland, France, Netherlands, Austria, Finland, Sweden) plus the United Kingdom.

4.3 Extra-EU duty stations (for staff)

The value of the annual update for duty stations outside Brussels and Luxembourg working in third countries is equal to the product of the global specific indicator multiplied by the implicit index (i.e. the combined impact of the percentage change in the cost of living in Brussels and the percentage change in the economic parities between Brussels and the duty station).

Taking account of the figures reported in Table 1 and Table 8 of the main report, **Table 8 bis** below presents the adjustment of the nominal net remuneration of EU officials outside Brussels and Luxembourg working in third countries which is necessary to maintain a parallel development of the purchasing power with the civil servants in the Member States.

This information is of particular relevance to those duty stations where application of the correction coefficient has been requested. This is only likely in practice for the locations identified in **Table 9.1** earlier, where the correction coefficient is greater than or equal to 100 at July 2021, or was greater than or equal to 100 at July 2020.
