

ALI Inventory 2015

Methodological inventory/questionnaire on the
compiling of Agricultural Labour Input (ALI)

Questionnaire identification

Country	Cyprus
Institution	Statistical Services of Cyprus
Author	Ministry of Finance
Date	2017

ALI Inventory 2015

PART A - DATA COLLECTION.....	2
A1 DATA SOURCES	2
PART B - AWU DEFINITION, FULL-TIME AND PART-TIME WORKING.....	5
B1 ANNUAL WORKING UNIT (AWU) DEFINITION.....	5
B2 FULL-TIME AND PART-TIME WORKING.....	5
PART C - CLASSIFICATION OF LABOUR INPUT AND COHERENCE WITH EAA.....	6
PART D - ANNUAL VOLUME OF WORK ESTIMATION.....	7
PART E - DIFFERENCES IN COVERAGE BETWEEN THE FSS AND THE ALI DATA ...	8

PART A - DATA COLLECTION

A1 DATA SOURCES

Please indicate below the name and the principal objective of the data sources (direct or indirect) used to compile ALI, indicating for each of them (except for EU surveys) the frequency, the reference period, the enquiry date and the representativeness.

A1.1 PRIMARY SOURCE

A1.1.1 *Survey unit*

The Farm Structure Survey is normally the main source for agricultural labour input data.

A1.1.2 *Scope or coverage*

Full coverage of the country every 10 years and a sample survey every 3 years. The coverage is based on non salaried and salaried agricultural labour input.

A1.1.3 *Frequency of the survey*

Data collection for ALI is implemented annually.

A1.1.4 *Reference period of the observation*

The reference period is the calendar year n

A1.1.5 *Reference period of the results*

First forecast: received in November of the reference year n.
Second forecast : received in January of n+1
Final data: received in September of n+1

A1.1.6 *Enquiry date*

From 1 September year n-1 to 31 August year n.

A1.1.7 *Representativeness (share of agricultural industry covered by sample)*

The aggregates for labour input is constructed by adding up the absolute annual work units.

A1.2 SECONDARY SOURCE

A1.2.1 *Survey unit*

PART B - AWU DEFINITION, FULL-TIME AND PART-TIME WORKING

B1 ANNUAL WORKING UNIT (AWU) DEFINITION

B1.1.1 Annual working days

260 days a year

B1.1.2 Daily working hours

8 hours a day

*B1.1.3 Annual working hours (B1.1.1 * B1.1.2)*

260*8=2080

B1.1.4 Public holidays (number of days)

15 public holidays

B1.1.5 Total annual holidays (including public holidays)

35 annual holidays.

B2 FULL-TIME AND PART-TIME WORKING

B2.1.1 Is the number of hours worked in a full-time job the same for the self-employed and employees in the agricultural industry? If not, please explain.

Yes

B2.1.2 Is the number of hours worked in a full-time job the same for agriculture and other branches of the economy? If not, please explain.

Yes

B2.1.3 Do you use the FSS to estimate the volume of part-time work in agriculture? If not, please explain how the estimation is made

Yes

PART C - CLASSIFICATION OF LABOUR INPUT AND COHERENCE WITH EAA

C1.1.1 Is there a distinction of the volume of work by salaried/non-salaried labour directly available from the data source(s)?

Yes there is a distinction.

C1.1.2 If yes, indicate the data source(s).

From administrative data and from Farm Structure statistics.

C1.1.3 If not, please indicate the source(s) of data and the estimation method(s). (In particular, please indicate in which way the breakdown of the family labour into salaried and non-salaried is made.)

[Click here to enter text.](#)

C1.1.4 How do you treat the labour input in the case of mutual assistance between agricultural holdings without remuneration in cash? (salaried with remuneration in kind, or unsalaried).

Mutual assistance between agricultural holdings is not included in the labour force.

C1.1.5 How do you ensure the coherence between "compensation of employees" (EAA) and salaried labour input? Please explain briefly.

The same methodology is used.

PART D - ANNUAL VOLUME OF WORK ESTIMATION

Please indicate below how you estimate the annual volume of work.

D1.1.1 Is FSS the only data source that you use? If yes, how do you estimate annual data from this single source? Please explain

No

D1.1.2 Is FSS used in combination with another survey (or other surveys)? If yes, please indicate the data source(s) and the estimation method.

Yes. The data are also collected from the Labour Force Survey

D1.1.3 Please explain if you replied NO to both of the above questions.

[Click here to enter text.](#)

PART E - DIFFERENCES IN COVERAGE BETWEEN THE FSS AND THE ALI DATA

E1.1.1 How do you estimate ALI for the holdings that are excluded from the FSS because of their size? Please indicate the data source(s) and the estimation method.

No estimation is needed because of the low threshold in the FSS. All holdings are covered.
