

Glossary: Quarterly data collection on living conditions (QLC)

Statistics Explained

This is a data collection that specifically targets the COVID-19 and its recovery period for collecting information about the daily life and living conditions of society. It was designed at the beginning of 2021 jointly by [Eurostat](#) and national statistical institutes. A total of 11 [EU Member States](#) (Belgium, Bulgaria, Ireland, France, Italy, Luxembourg, Hungary, Austria, Slovenia, Slovakia and Finland) have joined the initiative and 10 of them successfully delivered data. The first stage of the data collection covers the period of 2021-2022. QLC can be incorporated in any existing or new national representative survey, which allows infra-annual (quarterly or monthly) data collection.
