

Glossary: Gross capital formation

Statistics Explained

Gross capital formation (P.5) in [national accounts](#) is measured by the total value of the [gross fixed capital formation](#) (P.51g), [changes in inventories](#) (P.52) and acquisitions less disposals of [valuables](#) (P.53) for a unit, an institutional sector or the whole economy.

$$P.5 = P.51g + P.52 + P.53$$

By deducting [consumption of fixed capital](#) (P.51c) **net capital formation** is obtained.
