Tutorial:Restricting access to namespaces and pages

Statistics Explained

The page Configuration:RestrictedPages contains the list of all namespaces and pages which are hidden from non-logged-in users. Pages are hidden because they contain information on persons or specific work procedures.

Use the following procedure to hide (or 'unhide') a namespace or page:

- to hide an entire namespace with all its pages, add a line consisting of

  *Namespace:

e.g.:

  *User:

- to hide a page, add a line consisting of

  *Page name

do not forget to include the namespace for pages which are not in the 'Main' namespace:

  *Namespace:Page name

e.g.

  *Tutorial:Administration_rules

- to unhide a namespace or page and show it again to all, remove the line.
