

Glossary: Standard goods classification for transport statistics (NST)

Statistics Explained

The **Standard goods classification for transport statistics** abbreviated as **NST (2007)** , is a statistical nomenclature for the goods transported by four **modes of transport** : road, rail, inland waterways and sea (maritime).

As NST 2007 considers the economic activity from which the goods originate, each of its items is strongly connected to an item of the **European Union** product and activity classifications **Classification of products by activity (CPA)** and **Statistical classification of economic activities (NACE)** , which themselves are consistent with their counterparts at **UN** level, **CPC** and **ISIC** .
