

Glossary:Comparability ratio

Statistics Explained

Comparability ratio in [cause-of-death](#) statistics is a measure, expressed as a ratio, indicating the net effect of a change in classification (e.g. from [ICD -9](#) to ICD-10, or ICD-10 updates) or method (e.g. manual vs. automated coding) on a particular cause of death. Comparability ratios are the most usual way of presenting the results of a [bridge coding](#) study.
