DRAFT WORKING DOCUMENT

AIR IV RENEWAL PROGRAMME

This document has been conceived as a working document of the Commission Services. It does not represent the official position of the Commission. It does not intend to produce legally binding effects.

SUMMARY

This document provides an overview of *indicative* submission dates for supplementary dossiers for the renewal of substances expiring between 1 January 2019 and 31 December 2021. It is foreseen that the document will be updated regularly. **It is recommended to refer to the dates provided in the relevant acts adopted as published in the Official Journal (see <http://eur-lex.europa.eu>).**

Commission Implementing Regulation (EU) No 844/2012 *setting out the provisions necessary for the implementation of the renewal procedure for active substances, as provided for in Regulation (EC) No 1107/2009 of the European Parliament and of the Council concerning the placing of plant protection products on the market* has been published on 19 September 2012.

Commission Implementing Regulation (EU) 2016/183 *amending Implementing Regulation (EU) No 686/2012 allocating to Member States, for the purposes of the renewal procedure, the evaluation of the active substances whose approval expires by 31 December 2018 at the latest* has been published on 12 February 2016. This Implementing Regulation allocates the evaluation of active substances whose approval expires by 31 December 2021 at the latest a rapporteur and a co-rapporteur.

For the work programme, active substances have been divided into groups based on the initial expiry date of the active substance, and presumed characteristics of the substance. See Commission Implementing Decision *on the establishment of a work programme for the assessment of applications for the renewal of approvals of active substances expiring in 2019, 2020 and 2021 in accordance with Regulation (EC) No 1107/2009 of the European Parliament and of the Council* which was published on 28 September 2016.

Low-risk substances

Presumed low-risk substances have been identified based on input from the EU low-risk expert group. These substances are prioritised and the aim is to evaluate them before their respective expiry dates. It can be expected that, at renewal, these substances will be identified as low-risk substances according to the provisions of the Regulation. Products containing such low-risk substances can benefit from longer data protection and faster market access in the Member States. This is an important aspect in the promotion of the sustainable use of pesticides.

Each of these substances will be evaluated, as usual, by a rapporteur Member State and the evaluation will be peer-reviewed by EFSA and the Member States. In order to reduce the workload and similar to the assessment process as established for basic substances (which can also be considered to be low-risk), EFSA is not required to prepare a conclusion. This will contribute to reduced evaluation time. If, in certain cases, it does seem appropriate for EFSA to do a full evaluation, it can always be requested by the Commission.

Substances that may fail to satisfy the criteria listed in points 3.6.2 to 3.6.5 and point 3.7 of Annex II to Regulation 1107/2009

Under Regulation 1107/2009, an active substance shall not be approved if it falls under certain "cut-off" criteria. See Annex II, point 3.6.2 to 3.6.5 and point 3.7. In the work programme, active substances that are expected to fall under the "cut-off" criteria will also be evaluated before their expiry dates. They will undergo a full assessment by EFSA and the expiry dates will not be postponed.

Group 1 – substances with expiry date before 30 April 2019.

The expiry dates of the substances covered by Group 1 will not be postponed since they have the earliest expiration dates (latest 30/4/2016). Application dates for these substances will remain unchanged and are mentioned in the table below. The group contains 51 substances, and for 32 of these, an application for renewal has been submitted. Substances where an application for renewal has not been submitted are marked in the table with an asterisk (*) and the approval will expire at the current expiry date. Out of the 32 substances where applications have been received, 25 substances are presumed to be low risk based on input from the EU low-risk expert group; these are marked with a dagger (†) in the table below.

Group 2 – low-risk substances

Substances included in Group 2 are presumed to be low-risk substances. They have been identified based on input from the EU low-risk expert group. These 39 substances have priority and will be evaluated first. No extensions of expiry dates were intended in a first instance. However, because the majority of substances in both Group 1 and Group 2 have expiry dates in 2019, all substances in Group 2 will be postponed with one year. Further extensions are still possible *‘where for reasons beyond the control of the applicant it appears that the approval is likely to expire before a decision has been taken on renewal’*. All applications have to be submitted before the dates mentioned in the table below.

Group 3 – substances that may fail to satisfy approval criteria

Substances covered by Group 3 are active substances where there is indication they may fail to satisfy *the criteria listed in points 3.6.2 to 3.6.5 and point 3.7 of Annex II to Regulation 1107/2009*. 12 substances are presumed to fall in this group, and for these substances the original expiry dates remain valid and will not be postponed. Applications have to be submitted before the dates mentioned in the table below.

Group 4 – substances with current expiry dates between 31/07/2019 and 31/12/2021

Regarding substances covered by Group 4, a Regulation will be prepared to set new expiry dates. However, a new expiry date will *only be set* when an application for renewal has been received. In case no application has been received, the current expiry date remains valid. The current expiry dates for the 113 substances in this group will be postponed with either 2 or 3 years. To manage the workload it was not possible to provide an equal extension to all substances, therefore the group is divided to even out the workload. 46 substances are postponed with two years and 67 substances are postponed with three years.

NOTE!

The applicant must submit an application for renewal 3 years before the current deadline if they wish to renew the approval of the substance. Only when an application is received will the Commission take action and extend the current approval period. If an application is not received, the current expiry date will remain.
