

ASTHMA

INDICATORS AVAILABILITY

Guidelines to complete the first column of the priority questionnaire on the availability of indicators at national level.

For each indicator there are four columns which should be **completed by each IMCA participant** and each column which reflect an independent way of classifying the indicators. The methods to fill-up each column of the questionnaire are described in the following sections for each column.

The first column.

In this column, each participant will indicate the availability of each indicator taking into account the specifications of the indicators provided by the "*Annotated list of indicators for COPD and asthma*" and the availability of the information in their own country.

Information can be published in specific national or regional reports, in scientific publications with a clear Medline reference or in many occasions reports are produced but without making it available to the public (internal reports). In classifying indicators, **availability should be understood as the data is available independently if it has been published or not. The data available should be representative at national level.**

In cases for which data is available and perhaps representative but only for sub-national geographical areas, the details should be reported for each indicator in the report on the national consistency.

In order to classify the indicators according their availability at national level we have taken into account the availability and the sources of data available at present (mainly routine data, general HIS/HES surveys and specific surveys) and the ones that may be needed to develop in the future at national level.

Based on these criteria, we suggest to classify the availability of each indicator at national level by using the following six groups:

- A. Available from routine data and no modifications are required.
- B. Available from routine data but methodological changes are required.
- C. Available from national HIS/HES surveys (less than 10 years).
- D. Available from national HIS/HES surveys (more than 10 years).
- E. Available from specific research surveys (less than 10 years).
- F. Available from specific research surveys (more than 10 years).
- G. Not available and in the future data should be developed from routine data.
- H. Not available and in the future data should be developed from HIS/HES surveys.
- I. Not available and in the future data should be developed from specific national/international surveys.

Class 1: Demography and socioeconomic situation
