

# CEF Telecom Policy Background

DG CONNECT, 23 November 2015

# Connecting Europe Facility (CEF)

Infrastructure programme to support the establishment of trans-European networks to reinforce an interconnected Europe

# Why Digital Service Infrastructures?

The deployment of **Digital Service Infrastructures** supports the development and smooth functioning of the **Digital Single Market** by making it work in practice:

- enabling the delivery of networked trans-European interoperable services for citizens, businesses and/or governments
- while supporting the vision of public services being not only digital by default but also cross-border by default

# Which Digital Service Infrastructures?

- **Building block DSIs provide basic functionality and are reusable by sector-specific DSIs**

Examples are: eID, e-Delivery, eInvoicing

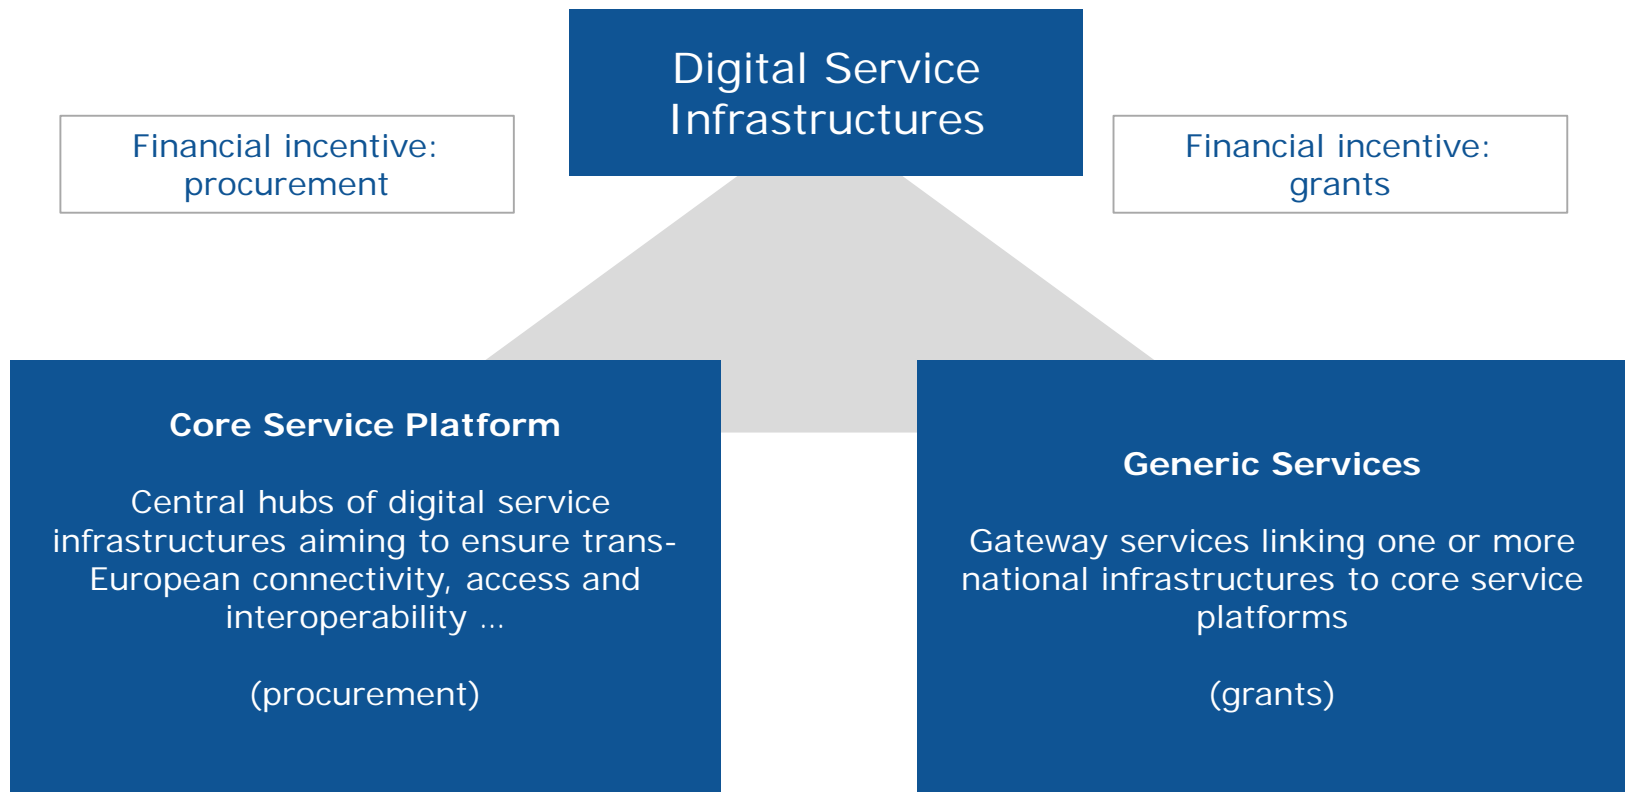

- **Sector-specific DSIs provide trans-European interoperable online services for citizens, business and public administrations**

Examples are: Safer internet, Public Open Data, eProcurement, Online Dispute Resolution

# How do they work?

# CEF Telecom

Support the completion of the Digital Single Market by **connecting Europe through digital bridges across borders** to the benefits of citizens, businesses and public administrations

and makes Europe grow further together through service delivery based on an eco-system of architecturally coherent building blocks
