

# Education & Innovation in Smart Cities

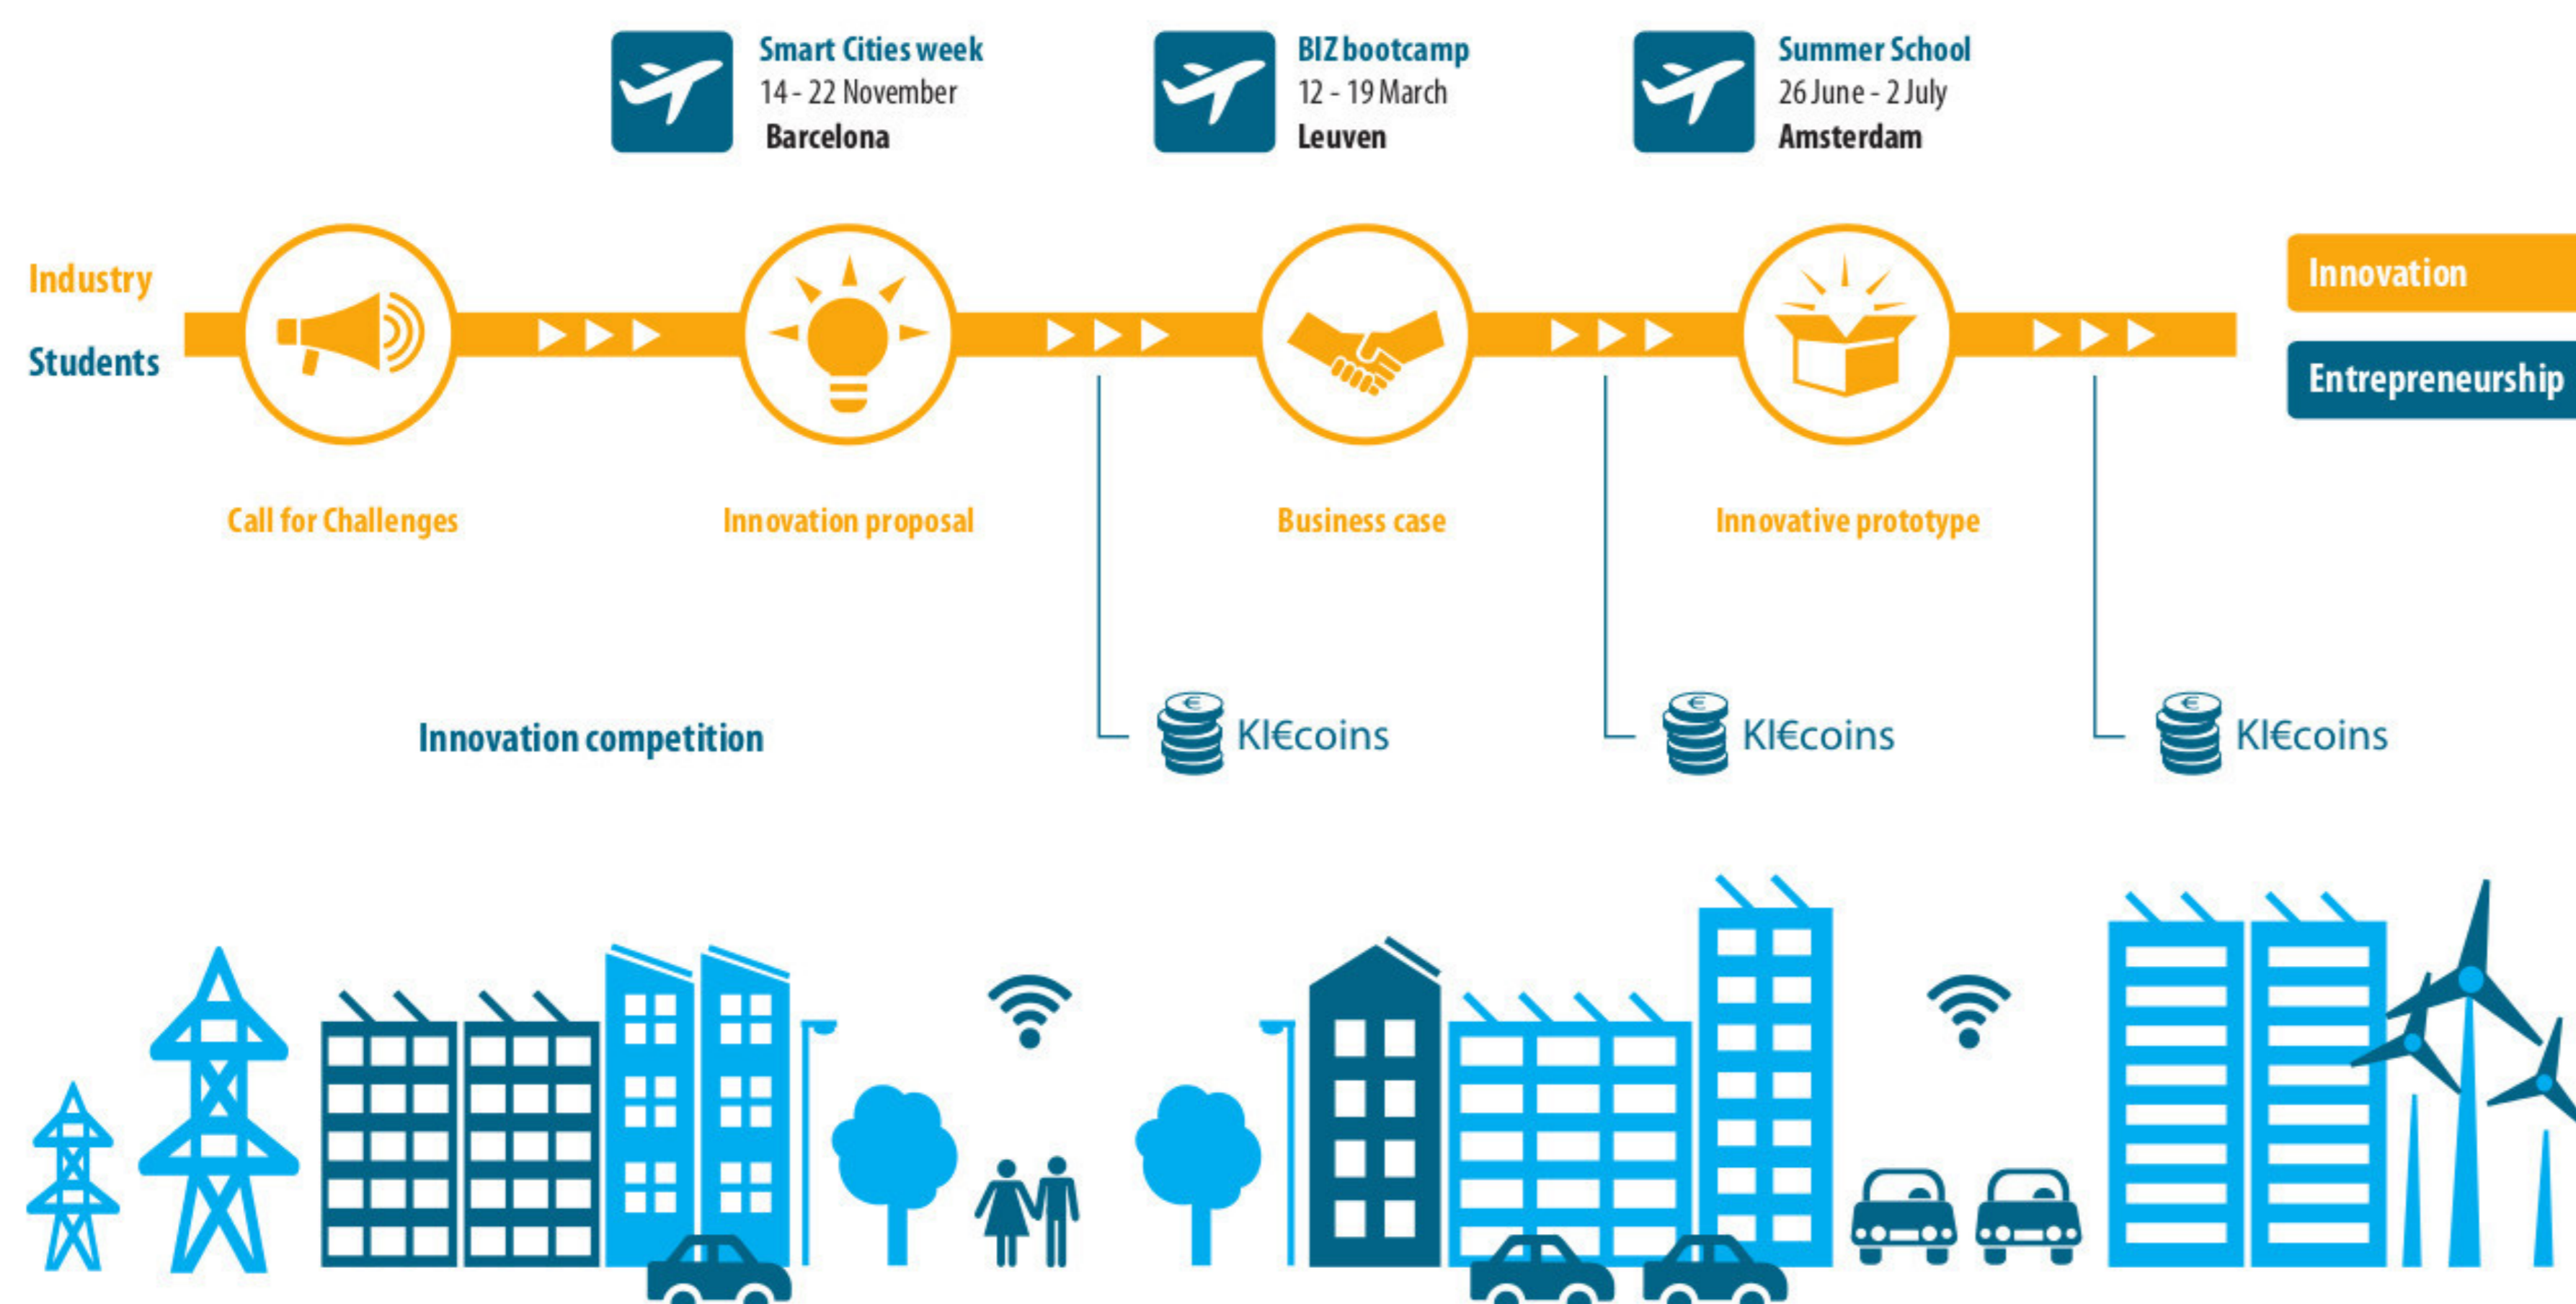

**Mar Martinez, Xavier Crusat**  
smartcities@kic-innoenergy.com

Are you looking for Education and Training activities for your innovation project?

- Our value proposition:** The **Innovation Journey** is an educational model that can be applied to any innovation project that is looking forward to link different stakeholders in teams with multidisciplinary real challenges by applying innovation methodologies and building up feasible business models. The main elements of this innovative model are:
  - Real-life challenges & hands-on multidisciplinary work.
  - Stakeholders involvement (companies, start-ups, cities, students, experts, and more).
  - Iterative application of innovation methodologies.
  - Team work & effective communication training.
  - Innovation competition with external jury.
  - Creation of value propositions for the stakeholders and the community.
- Our success case:** Example of this value proposition is the **MSc Energy for Smart Cities** where students, in international and multicultural teams, face multidisciplinary real-life challenges provided by companies and municipalities. The teams complete the three intense weeks journey by applying innovation methodologies, building sustainable business models and creating feasible entrepreneurship proposals.

## Innovation Journey

Energy for Smart Cities 2015-2016

Innovation Journey: from innovation to entrepreneurship
