TP Ferro (Eiffage, ACS/Dragados)

## Works for construction of a high speed railway section between Perpignan and Figueras

### 2007-EU-03110-P Part of Priority Project 3

The high speed rail line between Perpignan, France and Figueras, Spain is the core element of the Mediterranean branch of Priority Project 3 linking the French and Spanish high speed networks. As a standard-gauge mixed line, it is conceived for both high speed passenger and conventional freight traffic. It is equipped with ETCS Level 2 (an essential part of the European Rail Traffic Management System) to guarantee interoperability with the French and Spanish high speed rail network. This action was specifically concerned with the construction of 44.4 km of railway line, including the 8.2 km Perthus tunnel and the realisation of the last of 10 viaducts.

**The project has been completed.**
