Modernisation of selected sections of the Brno–Přerov railway line

2015-CZ-TM-0121-M
Baltic-Adriatic Corridor

The Action covers preparatory studies for the upgrade of the 63.7 km long Blažovice–Přerov railway section, which is part of the Brno–Přerov railway line on the pre-identified section Katowice-Ostrava-Brno-Wien of the Baltic-Adriatic core network corridor.

Currently, the Blažovice–Přerov section represents a bottleneck on the whole Brno–Přerov line in terms of insufficient capacity, speed and interoperability requirements.

The Action consists of the following activities:

- elaboration of the preliminary and detailed design for Nezamyslice–Kojetín and Kojetín–Přerov sub-sections and obtaining the zoning decisions and building permits for these sub-sections,

- elaboration of the detailed design for Blažovice-Vyškov and Vyškov–Nezamyslice sub-sections and obtaining building permits for these sub-sections.

Once completed, the Action will contribute to enhancing capacity, increasing travel speed, as well as improving safety and reliability of the railway line.
